NEW BEDFORD, MASS.—The past week saw a little improvement in the cut flower trade. There is plenty of stock and prices are about as usual. Carnations retail at 50c. per dozen; a few are selling at 35c. Violets are a drug just now; they are selling at \$1 per hundred, although a few of the florists are asking as low as 50c. per hundred retail. Roses are of good quality; they retail at \$1.50 per dozen. Sweet peas of good quality are now coming into this market; the general retail price is \$1 per hundred. There is plenty of bulbous stock on hand; some are asking 35c. per dozen retail, others 50c. Green is rather scarce just now.

E. H. Chamberlin is receiving some fine Winsor carnations from Peter Murray of Fairhaven.

H. A. Jahn's new white carnation Lloyd is still showing its free-blooming qualities. Mr. Jahn is busy shipping cuttings of this variety. He has a crimson which promises to be a winner when put out.

S. S. Peckham reports the cutting business as very active; he has had a heavy call for White Perfection and is cutting daily an immense number of blooms.

R. E. Noffly had a very attractive window display last Saturday.

E. Y. Pierce is cutting nice Boston Market carnations at his Cottage street place.

Two-week stocks are looking fine for Memorial Day.

HORTICO

ST. PAUL, MINN.—Trade has been quite active in Lent though the most of it is due to the funeral work. Stock of all kinds continues abundant and prices are down a little. Green carnations, green tulips and other green creations of the dyer's art sold readily on St. Patrick's Day, but "shamrocks from Tara Hall" were in small demand; however, our primary election was held that day and the average "Son of Erin" was busier at the polls than in honoring his patron saint. VERITAS.

Los Angeles, Cal.

A few observations on a recent trip to the San Bernardino mountains in the interests of the University of Southern California and its botanic garden recently established for the benefit of its students in botany, may be of interest to the readers of The Florists' Exchange. The locality is a forest reserve of 80,000, the elevation 3,500 feet, with a climate having a great range of temperature between midday and midnight. March 13 at noon the glass showed 75 degrees; at night ice a quarter of an inch thick covered water in vessels left in the open. Yet there was neither fog nor dew. Darkness falls upon the earth soon after sunset, because there is not enough moisture in the atmosphere to hold the rays of sunlight in suspension, as is the case in the East on the Atlantic Coast.

Plants indigenous to this locality at 300 feet elevation, and the one visited, are in full bloom here, while those growing there are just starting into growth. There for the first time since I have been in this State, now 11 years, did I see the beautiful manzanita, *Arctostaphylos manzanita*, in perfect development. The specific name of this shrub is Spanish—manzana, apple, and ita, diminutive or small, because of the resemblance of the bright red fruits to tiny apples, which are borne in clusters on short pedicels.

At least one square mile of territory is covered with specimens of perfect form and development, symmetrical in outline, yet without stiffness or formality as in a sheared shrub, as broad as high. The shrub is composed of branches of varying thickness, of very hard wood of a rich dark brown color, as smooth as though polished by a wood carver. The foliage is light green in color, of a leathery texture, and grows with its edges to the sunlight instead of the flat surface—a characteristic of most plants of arid regions. Myriads of flowers, delightfully fragrant, on some bushes pure white, on others tinted pink, covered the plants from the ground to their tops. It is the most magnificent shrub that has ever come under my observation, yet not one is to be found in parks or private grounds that I have yet visited on this coast. If it will adapt itself to Atlantic coast climatic conditions, grown as a tub plant, surely nothing now grown there will equal it in flower, foliage or form. I have neither plants nor seed to sell, but if any reader of these lines cares to experiment with seed I can put him in communication with natives of those mountain regions who would make collections for a small consideration. This plant is related to the trailing arbutus of the East; the flowers of both subjects are much alike.

The next shrub, which will not be in bloom until July, *Fremontia californica*, is an interesting subject. It belongs to the Malvaceae, is deciduous in character, and when in bloom makes the hills appear as though covered with a mantle of gold. The seed vessels are thickly covered with short, stout spines, as sharp and fine and irritating as are those of the fruit of the opuntia. To prevent evaporation of moisture from leaves and branches of plants native to arid regions, nature has covered many of them with a tomentose covering which is usually white, but in this case the branches are covered with a granular coat of a yellow color. The roots of this shrub have adventitious eyes which break forth and produce plants, as well as the seeds which are produced in great abundance, yet devoured greedily by a weevil. The flowers in this dry atmosphere retain their form and color long after they have fulfilled their mission—the production of seed.

Garrya elliptica, silk tassel tree, a dioecious shrub which resembles manzanita in foliage to some extent, is an interesting though not attractive plant. Both kinds of flowers—pistillate and staminate—are without petals, borne in jointed catkins two to six inches long. The fruit, which it was not my privilege to see, is said to be pretty. This is the "quinine bush" of the early mining days. The shrubs named have their reputed medicinal properties, each with its own specific value to the natives of these mountain regions, and are so used in case of sickness. P. D. BARNHART.

CUT FLOWERS FOR SALE

You can buy your *Narcissus*, *Jonquils*, *Tulips*, etc., direct from the largest growers in the South. For prices, etc., apply.

HUBERT BULB COMPANY,
R. F. D. No. 2. PORTSMOUTH, VA.
Gold Medalists, Jamestown, 1907.

CHANGES IN BUSINESS.

MERIDEN, CONN.—R. W. Barrow, florist, has moved from Union street to Goodwill avenue.

KNOXVILLE, TENN.—A. H. Dalley, florist, has opened a branch store at 511 Prince street.

BEATRICE, NEB.—The Dole Floral Company is preparing for the erection of two new greenhouses on its property on North Fifth street. The greenhouses will be 36x100 feet.

TRENTON, N. J.—Frank J. Clark, florist, has removed from the Opera House building, where he was located for many years, and opened a new store at 119 North Broad street.

DETROIT, MICH.—M. Bloy formerly of New Castle, Ind., has acquired the business and property of George A. Rackham at 880 Van Dyke avenue, this city, and will enter on possession April 1, 1908.

MEMPHIS, TENN.—Charles Hamner, C. C. Brown, Edwin G. Bell, Milton J. Anderson and W. L. Terry, have filed a charter for the East End Floral Company in the office of the county register. The company is capitalized at \$10,000.

ST. LOUIS, MO.—Kelley Floral Company has been incorporated; capital stock, fully paid \$2,000. Incorporators—Edward G. Kelley, J. F. Wohlfarth, Anna Wohlfarth, to cultivate and deal in flowers and plants.

MORRISON, ILL.—When James Davis of Davis Brothers has disposed of his entire interest in the greenhouse business of J. W. Steiner who recently embarked in the business with Roy Davis. Although Mr. Davis has sold out his interests in this city, he will likely remain here with his family until about the first of September, at which time they will move to Davenport or Aurora, as they have heavy interests in similar institutions in these cities.

Detroit.

The Week's News.

Good Spring weather and slowly returning prosperity have increased country sales to the satisfaction of all. Large azaleas and plant baskets were great favorites for the many store openings last week. Funeral work has kept the stores busy also.

The Michigan Cut Flower Exchange meets a steadily increasing demand for fancy ferns, with a fine quality of stock.

Last year's experiment of taking care of shade trees in our streets has met with such success that this feature has been made a permanent duty of our able park commissioner.

Olas. Warneke, who broke his leg five weeks ago, is far enough improved to go around the greenhouses on crutches.

Philip Breitmeyer and wife have returned from a two weeks' trip to Florida. FRANK DANZER.

St. Paul.

News of the Week.

Leeb & Company is the latest addition to the florist ranks, a new firm which opened a store recently on Minnesota street. Bananas and carnations, oranges and roses, are temptingly displayed side by side. The young ladies composing the firm are former employees of E. F. Lemke.

The regular meeting of the Twin Cities Florists' Club was held at Holm & Olson's store on Tuesday evening, March 17. J. Souden and J. Jorgenson read very able papers on Easter stock, and the State fair committee reported progress, after which J. T. Withers of Jersey City gave an interesting talk on tree planting, illustrated by lantern slides. The next meeting will be held at the city park greenhouses, Minneapolis, on Tuesday, April 21, with Spring bedding stock as the topic for discussion. VERITAS.

SELL YOUR CUSTOMERS FLOWER BOXES AS WELL AS FLOWERS

Increase Your Sales and Please Your Patrons by Showing a Line of the

ILLINOIS SELF-WATERING FLOWER BOXES

These handsome metal window boxes, porch boxes, hanging baskets, jardiniere pans, etc., are made in twenty-five different shapes and sizes for use in all manner of places where growing plants are employed. Reservoir has to be filled with water only about once in two weeks—perfect sub-irrigation provided. The plants draw water as needed—never get too much, never get too little.

The best selling line ever offered to retail florists—widely advertised in the leading magazines.

BROOKLINE, MASS. The estate on Dedham street, Newton Center, known as the Wade farm, consisting of twenty-seven acres of fertile upland, together with dwelling and outhouses, has been purchased by P. E. Palmer, the florist. It is intended to develop this property as a nursery for popular and choice hardy plants, shrubs and trees as rapidly as possible. One large greenhouse, 35 feet wide, and 150 feet long, with packing room and cellar, is already finished and planted, and another house will be erected as soon as the weather permits. The cultivation of roses and carnations will be transferred to this establishment, thus affording larger facilities for the growing of miscellaneous potted plants and flowers at the home place on Newton street. Mr. Palmer will continue to reside in Brookline.

DES MOINES, IA. The Grandview Nursery of East Des Moines is contemplating extensive improvements. This Spring at its packing grounds on Hull and Delaware avenue. At least \$5,000 will be spent in extending the property and increasing the capacity of the output. The sale of trees this year according to Mr. Carlsson, secretary of the company, is larger than ever before.

The Man Behind the Hoe.

Let no one sing of narrowed soul,
Of him who turns the sod;
'Tis his to breathe the virgin air,
And feel the kiss of God.
'Tis his to see the mysteries
Of nature come and go,
The budding plant, the perfect seed,—
The man behind the hoe.

'Tis his to feel the Spring's first thrill,
With hint of blue-bird's wing;
'Tis his to smell the clover sweet,
And hear the thrushes sing;
'Tis his to see the meadows wave,
Like rippling waters slow;
All sweetest sights and sounds are his,—
The man behind the hoe.

'Tis his to watch the springing corn
And feel the fresh'ning rain.
'Tis his to smell the blossoming grape,
And see the ripening grain.
'Tis his to pluck the golden yield
From fruit trees bending low;
Why, heaven itself lies all about
The man behind the hoe.

Oh, bless the man whose lot is cast
Thus close to nature's heart;
What need has he of millions stored,
Who of the whole is part?
What need has he of bank or bond,
Who works to make things grow?
The only freedom on the globe
Is his behind the hoe.
—Townsend Allen in New England Farmer.

226 Devonshire Street, BOSTON, MASS.

New York.

The Week's News.

According to newspaper reports we are to have an enormous crop of Easter lilies shipped here from Bermuda. Present reports say that the coast steamer Bermudian will arrive here on the 17th of April—that will be the Friday before Easter Sunday—with about 10,000 boxes of lilies. This may or may not be so, but it is a well-known fact that anybody who has once bought lilies that have arrived by steamer from Bermuda does not care to speculate on them a second time. The flowers usually come very poor, and the foliage is so pale and delicate that it renders them practically useless.

To get down to facts about lilies, it is quite evident that in this locality the supply is far below what is usual for this market at Easter. We mentioned last week that 50 per cent. of the bulbs planted had shown disease and were thrown away. Since that time we have learned that our estimate was a low one, indeed, and 75 per cent. would have been much nearer the actual figure. We saw this week a few blooms of the Formosa brand of lilies, and if the general crop comes up to the standard of what we saw, this lily will certainly meet with the approval of the growers. It throws up a good long stem and carries a good average of blooms per plant. Taking all things into consideration, it would seem that the price of lilies will be a little higher this year than has been their wont for several years.

The florist business, evidently, like many other lines, is moving uptown. The MacIntosh Company will locate on the southwest corner of Broadway on Forty-sixth street, and the Van Praag Company is to locate somewhere in the same neighborhood. The present store of Van Praag, which is between Twenty-ninth and Thirtieth streets, Broadway, is in the hands of a receiver, which, by the way, is unfortunate for some wholesale florists, as collections are hard even when a business is kept going.

Reed & Kellar, florists, supply men at 22 West Twenty-fifth street, are finding an excellent demand for their flower and plant baskets, which have trimmings of

the natural pussy willow. Another specialty of this house just now is an aquarium which hangs on the wall and is in the form of a picture. A rural scene is depicted on the back of the frame and is seen clearly through the water in which the goldfish are swimming.

Twenty-eighth street will lose the popular name given to it some time ago by a journalist—"the tin pan alley," as most of the music publishing houses are moving farther uptown. In fact, the street may be termed very quiet just now, with the Lenten season and the loss of the many kinds of music that are always heard there.

President of the S. A. F. O. IL, F. H. Traendly, accompanied by John Young, one of the directors, left last Saturday, for Niagara Falls and Chicago. The meeting of the board of directors of the S. A. F. will be taken in at the first mentioned place and the rose exhibition is the object of the visit to Chicago.

Mr. Hans, formerly gardener on the Palmer place at Stamford, Conn., is now with A. G. Hodenpyl, Locust Valley, L. I.

F. R. Pierson, Tarrytown, N. Y., left on Tuesday night for Chicago, to attend the annual meeting and exhibition of the American Rose Society.

"Hodgson, the Florist's," an establishment which for nearly four decades was in Fifth avenue, has disappeared. Its last stand, on the southwest corner of Fifty-sixth street, has been closed and its affairs are being conducted from an apartment house in Fifty-eighth street near Eighth avenue.

Visitor in town: O. C. Simonds, Chicago.

BROOKLYN, N. Y.—S. Jacobs & Sons, with their new factory, are now well prepared to furnish everything in the line of sash and greenhouse lumber. This firm has long made a specialty of greenhouse lumber cut to any dimensions, and has worked up a large trade not only among the florist craft of the country, but among the truck gardeners also, the latter being enormous purchasers of sash of the Jacobs manufacture. The firm is also headquarters for boilers, pipe fittings and everything that goes to make a complete greenhouse.

Indianapolis.

A Disastrous Hailstorm.

A heavy wind and hailstorm reached this section Wednesday, March 18, at about 7 o'clock, p. m.—an unusual hour for such an occurrence. Hail the size of pigeon eggs fell in immense quantities and could be seen lying in heaps at noon the following day. The whole southern section of Indianapolis received the heaviest pelting, and it was here that immense damage resulted to the florists and gardeners. Altogether from 15 to 20 establishments were riddled with the icy shot. Some of the growers estimate the amount of glass lost to be as high as 80 per cent. Hail storms at any season of the year are bad enough, but one occurring so early in the Spring, when the growers' houses are filled with Easter stock and followed by heavy freezes, the situation is doubly disastrous.

Among the florists who sustained the greatest damages were: D. H. Schilling, with an estimated loss of 2,000 feet; John Heidenreich, 5,000 feet; F. A. Conway & Company, 3,000 feet; Henry Rieman, 1,500 feet; E. Hukreide, 3,000 feet, and the other gardeners from 30,000 to 40,000 feet.

Relief measures were begun immediately after the storm. Some of the affected ones contracted for their glass and supplies the same evening. Canvas and building paper were hurried to the houses, so that a portion of the stock could be saved from freezing. The other north side florists, among them A. Weigand & Son, E. A. Nelson, Bertermana Brothers Company, and Smith & Young Company, sent a number of their employees to aid in saving the remaining flowers. Single and double glass suffered alike, as none withstood the storm. Truck gardeners removed immense quantities of lettuce and radishes and other products to the commission houses, only to have it condemned because of the small particles of glass remaining. The city greenhouses at Garfield Park presented a dilapidated appearance. Houston Tall, city florist, has taken long strides in saving a large number of bedding plants from total destruction. Reports of heavy storms in surrounding towns, in-

cluding Richmond, are seen in the local newspapers. The direct news of any serious loss has not been received. The local supply of glass was exhausted by Thursday morning and the remainder is anxiously awaited.

I. B.

Boston.

News Notes.

The Gardeners and Florists' Club proposes holding an outing at the establishment of Thomas Roland, Nahant, on April 11.

W. H. Elliott proposes to put another addition to his last built rose house at his New Hampshire place, having just completed a contract for the lumber with the A. T. Stearns Lumber Company. This firm is also supplying lumber to the Flore-x Gardens, Philadelphia, and the Floral Exchange, Edgely, Pa., one house each; to John Burton, Philadelphia, one house; to the Livingston Seed Company, Columbus, O., one house; to C. L. Howe, Dover, N. H., one house, and to John Newman, Woburn, one house.

A. Leuthy has just returned from a trip among the New Jersey growers.

Welch Brothers are handling a high-class grade of American Beauty roses at present; this firm has now an extensive trade with Canada, and will this year again make a specialty of shipping Easter lily plants in cases direct from the grower.

E. J. Rogeau will discontinue selling the products of H. N. Eaton in the Park street market, but will be found handling the goods of Paul Reichwagen and others.

There were many visitors from a distance this week attending the flower show among whom we noted W. A. Manda, South Orange, N. J.; J. E. Lager, Summit, N. J.; F. W. Kelsey and George Struck, New York; John Hay, Philadelphia; J. F. Huss, Hartford, Conn.; and Louis Reuter, Westery, R. I.

Among Bostonians at the Rose Society's Chicago meeting are P. Welch, W. H. Elliott, George Elliott, Alex. Montgomery, Jr., and W. J. Stewart.

News Notes.
The stock of cut flowers is not quite as large this week; carnations have fallen off in supply the past four days, but there is much more stock on the market than the demand is using up. The retail trade is very quiet; all business appears to be done in the early morning hours.
The following have gone on from here to attend the meeting of the American Rose Society in Chicago: William P. Craig, Adolph Farenwald, Martin Santman, John Welsh Young, and G. Epton. Those exhibiting roses from this section are A. Farenwald, Myers & Santman and Robert Scott & Son.
The Spring show of the Pennsylvania Horticultural Society will open on Tuesday next. There are quite a good many new varieties of hyacinths, tulips, and narcissi to be on exhibition in competition for the H. Waterer and Henry F. Michel Company prizes.
Stewardson Brown, Professor of Botany of the Pennsylvania Horticultural Society, has just returned from a trip to Bermuda where he made quite an extensive investigation into the Harrisii lily growing industry. He saw quite a lot of diseased stock, but states that many growers are exercising more care to produce better bulbs. The experimental station work in raising bulbs from seed has resulted in producing a fine lot of lilies this year.
James Dean, Freeport, L. I., was in town on Tuesday.
DAVID RUSE.

OMAHA, NEB.—The Phoenix Nursery Company of Bloomington, Ill., is looking for a site in Omaha and may locate on forty acres of ground at Forty-sixth and Harney streets.

Trade Notes.

The glutted condition of the market remains unchanged; there is a superabundance of nearly all stock and prices are correspondingly depressed.

March came in like a lamb and thus far has maintained most enviable conditions; even the equinoctial period is passing with clear skies and moderate temperatures.

J. M. Hammer & Sons have installed a new six h. p. gasoline engine for pumping water and mixing clay from which they make flower pots.

The annual banquet of the Washington Florists' Club, with installation of the newly elected officers, is to take place at Freund's, 815 Tenth street, N. W., at 7:30 p. m., April 7.

JAS. L. CARBERRY.

Columbus, O.

Club News.

The Columbus Florists' Club seems to have entered upon an era of good-fellowship, and its members find it pleasant and profitable to get together once in a while and cultivate the social spirit.

For the first meeting night of March there was a pleasant gathering of members of the club at the plant of Messrs. E. Metzmaier & Son, on South Fourth street, where a short business session was held in the neat new offices recently erected by the firm and fronting on Fourth street.

C. D. B.

CLEVELAND, O.—Claiming that the late Joseph M. Gasser, florist, was insane when he made his will in December, 1906, Attorney J. A. Mathews, assistant treasurer of the Guardian Savings and Trust Company, has filed papers in probate court asking that he be appointed administrator of the \$250,000 estate.

MILFORD, CONN.—The funeral of Emma P. Comstock, wife of Roger H. Comstock, florist, was held at New Canaan, Conn., on Monday, March 16.

PRUNING SHEARS.—An American consular officer in an Asiatic country reports that there are thousands of pruning shears used in his district during the silk season in cutting off the young branches of the mulberry trees, which are fed with their leaves to the silk worms. The consular officer in question is of the opinion that there is a good field of trade for American manufacturers of strong, cheap, and simply constructed shears. He forwards the names of three firms to whom correspondence on this subject should be addressed. Those desiring these addresses should refer to No. 2066 Bureau of Manufacturers, Washington, D. C.

Chicago.

The Week's News.

Bright, typical Spring weather is having a good effect on the retail trade. Sales are more numerous, and transient business has picked up considerably.

W. H. Elliott, Brighton, Mass., and Alfred Hudson, Boston, formed the advance guard of the visitors to the meeting of the American Rose Society.

B. Eschner of M. Rice & Company, Philadelphia, spent a few days in Chicago on his return from the westernmost limits of his territory.

A State street florist had in his window last week a novelty which drew crowds of curious passers-by, and resulted in many inquiries within the store.

The Winterson Seed Store received a carload of fancy ferns this week, nearly a million fronds, the shipment being one of three carloads to arrive within a few days.

P. W. Martin, East Fortieth street, has in his line greenhouses a lot of nice stock in shape for his Easter trade. He is contemplating the rebuilding of two of his houses in the very near future.

Your correspondent was privileged to see an interesting exhibition of examples of the new color photography, by the Lamiere Brothers of Paris, France, before a society of Chicago art workers last week. The subjects chosen were interiors of the conservatories at Lincoln Park, and the orchids, cinerarias, azaleas, genistas, daisies, lilies and various other plants were strikingly shown in their natural colors and with all the natural tones appearing in a manner beyond the scope of the artist's brush.

Cincinnati.

News Items.

On Wednesday evening, March 18, severe hailstorms passed over Southern Indiana. G. R. Cause of Richmond, Ind., reports a heavy fall of hail. The damage, he says, was not very great in places, yet most of the florists lost more or less. Mr. Cause lost 200 feet. The same storm passed over Wilmington, O., breaking about twelve hundred feet of glass for the Wilmington Floral Company. Xenia, O., also was visited, but at this writing I have not received any reports. Over Cincinnati on the same date we had a severe rainstorm, but it was not accompanied with hail.

Edward Forder of A. Sunderbruch's Sons is indisposed with la grippe. T. W. Hardesty is also at home suffering from the same malady.

Business is now very near to the edge of the precipice, and a little shove will push it clear over.

Green carnations and "green dope" never sold so well as they did the past St. Patrick's Day. The demand was greater and more carnations were sold than on McKinley Day. Enchantress colors up even better than white, and was preferred, being a larger flower and making a better appearance.

C. J. Ohmer of the Florists' Wire Design Company was in Dayton, Friday, Saturday and Sunday on business and pleasure.

The National Cash Register Company closed down tight in all departments except the salesroom. Three thousand people are reported idle from that one factory alone, which makes the outlook rather gloomy for Dayton for a while; but, like water, business will always find its level, possibly not until after the presidential election though.

L. P. Benson, Newport, Ky., left on a business and pleasure trip March 17. Oklahoma and other portions of the West will be visited before his return, which will be in about six weeks.

Max Rudolph is home from the hospital much improved in health since his operation.

Miss Mary Lodder of Hamilton, O., was a caller on the 19th inst.

E. G. G.

St. Louis.

News Notes.

L. Hastings, traveler for A. H. News Company, Cambridge, Mass., called the past week, displaying a fine line of sample flower pots. Mr. Hastings reports a nice business here.

The Grimm & Gory Florist Company purchased, through Vincent Gory, the greenhouses and land from Jesse Von Compenhont at 4560 St. Louis avenue, there being a frontage of 160 feet on that thoroughfare. The firm will operate the houses and grow out flowers and plants for its Cass avenue store.

Kelley & Petschonek have dissolved partnership, Mr. Petschonek retiring; Mr. Kelley will continue under the name of the Kelley Floral Company, taking his brother and father-in-law into the new firm, which will continue at the old stand, 627 North King's Highway.

Fred. Foster, head of the Foster Floral Company, while out driving in the country met with a painful accident; he was thrown from his buggy and sustained a fractured leg and broken rib. The good old Summer time will be here before Fred. will be out again.

Nat Kingsley, head of the Mullamphy Floral Company, disappeared last week Thursday. As his accounts are all in good shape, Mr. Sager, his partner, suspects foul play.

H. Weber and Sons, Sanders' Nursery, Rotenhofer and Schuette, our nurserymen, have had a very busy season in trees and shrubs. Stock of all kinds is selling better than ever before. California privet is having a big run at all these places.

Park Commissioner Scudlan, in making his report to the Board of Public Improvement, says that the Louisiana Purchase Exposition Company is far from completing the restoration of the part of Forest Park on which the World's Fair was held, and is of the opinion that it will take another year before the company could turn over to his department that part of the park completely restored, and that it must be entirely to his satisfaction before he would accept same.

President W. C. Young of the Florists' Club is making a special effort to have a large attendance at the April meeting, which will take place in the new meeting hall, northeast corner Eleventh and Locust streets, Bowman's Hall, third floor. ST. PATRICK.

One of the large conservatories at Washington Park is just now a beautiful sight. A very large collection of cinerarias is to be seen in flower, and in addition is a collection of large, bushy plants of wallflowers in both double and single varieties, some of the individual specimens running fully 40 inches in diameter. There is also a nice showing of camellias in bloom.

C. Hammer of the East End Floral Company, Memphis, Tenn., is in town this week. He reports retail business quite good in his city.

Robert Simpson, Clifton, N. J., and Benjamin Hammond, Fishkill-on-Hudson, N. Y., were visiting the trade early on Tuesday. They spent the afternoon at the Poehlmann establishment, Morton Grove.

W. N. Rudd and George Asmus are in Niagara Falls in attendance at the meeting of the board of directors of the S. A. P. O. H.

O. P. Bassett and Mrs. Bassett are expected home from Pasadena, Cal., the first week in April.

President Leonard Kill and Secretary T. E. Waters were busy men during the early part of the week in the preparations making for the success of the rose show this week.

Vaughan's Greenhouses have just received a carload of box trees, which are opening up in fine shape.

J. H. PRYER.

HAIL NEWS.

Hail losses recently reported are: R. S. Murray, Bellefontaine, Ohio; H. D. Schilling, Indianapolis, Ind.; and Joseph R. Goldman, Middletown, Ohio. JOHN G. ESTER, Secretary F. H. A.

NEW YORK.—The New York Florists' Bowling Club was organized Friday evening, March 20, with W. E. Marshall president and Joseph A. Manda treasurer. Meetings are to be held every Friday evening in the Albion Alleys, 117 West Twenty-third street. Dues are 50c. per night, payable in advance. F. H. Traendly, president of the S. A. F. O. H., has offered transportation to the convention at Niagara Falls next August to the team making an average of over 155 in practice games. These games will begin on Friday evening, April 3. Members who wish to take advantage of this competition should not fail to be present at that meeting. Scores made last week were as follows:

W. E. Marshall	128	163	138
Jos. A. Manda	156	171	181

ELIZABETH, N. J.—The Elizabeth Nursery Company of this place, anticipating an extra demand for hardy trees, shrubs and perennials, has grown an enormous quantity of this class of stock, and is prepared to meet heavy demands along any line of hardy stock. The company has been established so long, and the quality of the stock it sends out is so well known, that only brief mention need be made of these facts here. We may say, however, that never before were the firm's trees and shrubs in such excellent condition as they are this season. Azalea amœna, Catalpa Bungei and viburnums in variety have been specialized to quite an extent, and there is a grand stock of these on hand. The list of hardy perennials is a most complete one, covering about everything that is required for the herbaceous border or flower garden.

Pittsburg.

Trade and News Notes.

The cut flower trade has not shown any improvement, excepting an extra demand for funeral work which helped considerably to move some of the stock which is still coming in too strong. Roses seem abundant and cheap. Carnations are not so plentiful; in quantities low prices are offered, although about \$3 per hundred is the ruling figure for good stock. Violets are in fair demand at 50c. per 100. Bulbous stock sells at any price. Callas are offered as low as \$7 per 100. St. Patrick's Day passed off very quietly; very few green flowers were sold, although the weather was fine.

Plant trade is looking up better since more favorable weather prevails, the market stands outdoor have started up and will continue for the season.

W. C. Beckert, seedsman, was again threatened by high water, the third flood this year; but it only got below his store room floor and the damage was not great, as everything had been removed from the cellar.

One of our large department stores is again offering two-year hybrid perpetual roses for sale at a bunch of ten for \$1, a low price which induces many people to buy. The firm has ordered over 30,000 plants from Holland and the stock looks well.

Mr. Gandy, representing H. A. Dreer, Philadelphia, and B. Eschner of M. Rice & Company were visitors during the week.

George W. Burke, Superintendent of Parks, was presented a diamond stickpin by the members of the Schenley Maritime Club at their annual banquet held last week. E. C. REINEMAN.

Rochester, N. Y.

Trade Notes.

Business for the past two weeks has been exceptionally good; this perhaps on account of deaths of several prominent men of this town, also the Spring openings of the dry goods stores, one of which decorated its windows with hundreds of pots of bulbous flowers.

Last Saturday was evidently bargain day in the florists' stores, for all, without exception, sold special carnations 25c. per dozen. This made an exceptional amount of labor, but was a complete success as far as cleaning out the commission house, everything available being sold out.

No staple price can be given on any commodity, there being plenty of everything, especially lilies, for which there is not much call. American Beauty roses move slowly. A sale was also on violets at 35c. per bunch, all being disposed of. These sales are a great innovation, and a good means to clean out all kinds of stock good, bad, and indifferent, but whether this is to work to the harm of the future prices remains to be seen. Naturally at this time there is no demand, and excessive supply, and the reasonable rates enable everyone to buy.

Easter lilies will be somewhat scarce this year, owing to the lateness of the season, and the poor quality of bulbs, loss of which will easily reach 65 per cent. Speaking of lilies, those from Formosa, one case of which was tested by Salter Brothers this year, were a complete success; out of 200 bulbs, only four were thrown out. The remainder grew beautifully, and bore from 4 to 8 buds on clean healthy stems. Its manner of growth is somewhat similar to that of Harrisii, but the flowers are a trifle longer, and stand well up above the foliage. The trial box proved so successful

How to Make Swampy Land Valuable

There are many acres of wet land in this country that ought to be in use and making money for someone. At a moderate outlay this land can be drained and rendered very fertile and profitable, and it is no wonder many farmers and land owners are availing themselves of this means of increasing their tillable acreage—and consequently their incomes.

One of the best methods known is the use of Jackson's round drain tile, which readily carries off the surplus water and effectively answers every requirement of a perfect drain. Soil drained by the use of tile is earlier in producing than other soils, easier to cultivate, and gives remarkable yields of crops.

It is worth while, if you are interested, to write to John H. Jackson, Third avenue, Albany, N. Y., for information about drain tile, chimney tops, sewer pipe, fire brick, etc.

Mr. Jackson publishes a pamphlet on drainage which he will send free to those in the New England and Middle Atlantic States who are interested in the subject.

Heating.

Growers' Problems Solved by U. G. Scollay.

I have two connected houses I wish to heat by hot water; their size is as follows: Each 16x100 feet, 9 feet to the ridge, 5-foot walls with 2 feet of glass on each side, size of glass will be 16x18. I wish to have two 2-inch flows under the side benches in each house. How many 1 1/2-inch returns must I have in each house to heat it to 55 degrees in zero weather? The houses run north and south. H. J. H.
New Jersey.

—When you state that you desire to put "two 2-inch flows under each side bench." I assume you mean one under each bench. It will be crowding 2-inch connection pretty hard to carry the amount of surface you will require; 2 1/2-inch would be much better. However, to answer your question, I would state that in addition to the 2-inch flow you will require ten 1 1/2-inch pipes, five under each side bench. This would maintain the temperature, but why not use all 2-inch and discard the 1 1/2-inch? You will get better results. If you decide to use all 2-inch, ten lines will do, and you could make a very nice layout by putting four 2-inch under each side bench, and two under the center. I know the latter plan is to be preferred to yours. U. G. SCOLLAY.

I send sketch of boiler you have been kind enough to give an opinion on, but to give further information you ask for more particulars. As you will see by the rough sketch it is a locomotive-shaped boiler; it has been used for marine work. Length over all is 15 feet, fire grate space 4 feet 9 inches x 2 feet 9 inches inside measure; all fire box water jacketed; fire box 3 feet high inside; tubes forty, 3-inch diameter, about 8 feet long. What I want to know is, would such a boiler, if used for hot water, be economical with coal and about what capacity in 2-inch pipe would it have or what capacity in houses 100 feet long by 20 feet wide at a temperature which rarely touches zero? The houses would be used for carnations, lettuce, violets, etc. What I want to find out is if it would pay me to use said boiler, and use coal as fuel, as I have the boiler. It was being used at 90 pounds pressure when taken out of the boat. I wish to use hot water, not steam, if possible, and I want to heat at least three houses, each 100x20 feet, 10 feet to ridge from ground, sash bats 11 feet, 6 inches and no side glass; one end glass. If I could heat more houses I should like to know; also if I could get an approximate idea of fuel consumption. Is clay mixed with coal good for use in furnaces? Would the coal consumption in a boiler as mentioned be a great deal more than in a boiler made for hot water heating? H. B. D. L.
British Columbia.

—The boiler of which you give particulars should be good for 3,000 square feet of radiation, hot water. I do not think, however, that it will be the most economical boiler for your purpose. I would discard the steam dome and put my flow flange connection on the top of the shell. The returns can come in at the base of the fire box. The total capacity of the boiler in 2-inch pipe could be easily run to, I should say, about 7,500 lineal feet. If you pipe one of these 100x20-foot houses for carnations, put about 12 lines of 2-inch pipe, which will give you a temperature of 55 to 60 degrees. For lettuce, which will require 45 degrees, I would add 8 lines of 2-inch pipe; for violets the same proportion as the lettuce. I do not think, however, that the house would be well adapted for violet

growing, and would suggest that you construct special houses for this latter purpose. On average conditions for the amount of glass you mention, I would assume that you will consume about 40 to 45 tons of coal per season for the purposes above mentioned. The boiler has ample capacity to add more glass, but I do not think that you will be using the best type of boiler for your purposes. U. G. SCOLLAY.

Cypress Scores a Victory.

At the convention of the National Irrigation Congress held last September at Sacramento, Cal., the prize offered by the California Wine Growers' Association for the best substitute for white oak for tight cooperage suitable for wine barrels, was awarded to cypress.

The entry for the prize, which was a beautiful white oak cask, with artistic silver trimmings, was made by the Southern Cypress Manufacturers' Association, St. Louis, Mo., manufacturers of red cypress, who are naturally elated at the result.

Cypress has for many years been recognized as one of the foremost woods on the American lumber market. Its great resisting power to atmospheric influences, such as decay and weathering, is practically unequaled by any other wood. The ease with which it can be worked, its comparatively high strength, its beautiful color and finish have made it one of the most eagerly sought for woods in a country where many other woods make claim for recognition. The award of the prize for the manufacture of wine barrels is simply another tribute to one of the peculiar qualities of cypress wood.

Red cypress is used extensively in the making of tanks, plant tubs, and other accessories of the florist, as well as for benches, etc., and is handled by the Louisiana Red Cypress Company, New Orleans, La., which concern is greatly gratified at the success now scored by its specialty. This firm holds testimonials as to the great efficacy of cypress in greenhouse work from many of the leading trade concerns of the country.

 NEPONSET, Boston, Mass.

WOOD—HOW LITTLE WE USE IN OUR HOUSE

YOU know some prefer an all cypress house—and we sell it to them and they are satisfied. But on the other hand, before selling to a man we don't consider it a square deal, not to first point out the many improvements in our construction; show him the principal features that are certain to mean less repairs and a more productive house.

All our moves have been continually toward reducing the wooden members or substituting them entirely with iron. Now take that Semi-Iron House of ours—it has a *Complete Iron Frame*. The Side Posts are of guaranteed wrought bar iron, with our *Patent Galvanized Eave Plate*.

The roof between the eaves is supported by our patented *Clamp Pipe Frame*.

The *purlins* are of 1¼ inch pipe, strongly fastened to the bars by *metal binders*, and clamped to the pipe columns by *Clamp Column Fittings*.

The Giant Arch is a support of great lightness, but has tremendous strength,

and is made by clamping together the purlins, columns and cross-ties.

All columns are set in adjustable *cast iron foot pieces*.

The sash bars are firmly anchored to the eave plate by our *Patent Sash Bar Clasps*, and each pair of opposite bars on either side of the ridge, in addition to being nailed, is bound to it by the *Ridge-Holdfast*.

So you see the entire frame is of iron, and the only wooden members that go into the completed superstructure are the bars, ridge and sash.

Now when you compare estimates—ours with others—compare item for item—actually what is specified in black and white.

When it comes to deciding also bear in mind that L. & B. have a reputation from Main to California for doing everything they do with the greatest care and thoroughness. It costs to do things right in the first place, but it is a great deal cheaper in the end.

Send for Semi-Iron Circular.

The pipe and clamp frame in the Semi-Iron House. The Giant Arch, the central part of the frame, is a "Tower of Strength"

FLORISTS' EXCHANGE

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

VOL. XXV. NO. 14 NEW YORK AND CHICAGO, APRIL 4, 1908 One Dollar Per Year

CARNATION CUTTINGS

We are in unusually good position to supply exceptionally well-rooted, healthy stock. We have such a large quantity of flowering plants that we propagate only from heel cuttings from flowering shoots. Our cuttings are rooted in light, sunny, airy houses, and we are sure will satisfy the most critical buyer.

A prominent carnation grower writes: "You seem to be THE ONLY FIRM IN THE BUSINESS THAT KNOWS HOW TO PACK STOCK AND HAVE IT REACH THE BUYER IN GOOD CONDITION, and I have always found your cuttings cheaper than the same varieties from others at much lower figures."

While our prices may not always be the cheapest, we certainly can give, quality considered, as good value as, if not better than, is obtainable anywhere.

WINSOR which we introduced last year has proven to be the finest novelty introduced in years. We think it is the most profitable variety grown to-day, considering its fine color, splendid keeping qualities, and productiveness. When properly grown, it leaves little to be desired, and almost everyone succeeds with it.

White Enchantress the best all-round white carnation, on account of its large size, long stem, earliness, and productiveness. Our White Enchantress, exhibited at the Carnation Convention at Washington, was the only White Enchantress exhibited that received an award.

Strong-rooted cuttings, now ready for delivery, from sand, \$6.00 per 100, \$50.00 per 1000; from soil, \$7.50 per 100, \$60.00 per 1000.

We offer, also,

BEACON and RED CHIEF, from sand, \$6.00 per 100, \$50.00 per 1000; from soil, \$7.50 per 100, \$60.00 per 1000. Also

VICTORY, MELODY and WHITE PERFECTION, from sand, \$4.00 per 100, \$35.00 per 1000; from soil, \$6.00 per 100, \$45.00 per 1000.

VARIEGATED LAWSON, WHITE LAWSON and RED LAWSON, from sand, \$3.00 per 100, \$25.00 per 1000; from soil, \$4.00 per 100, \$35.00 per 1000.

We can supply, also,

WINONA and AFTERGLOW at \$12.00 per 100, \$100.00 per 1000.

Buyers will find transplanted stock offered from soil well worth the difference in price.

FLOWER SEEDS**

Verbena Mammoth, in colors or mixed, 1/4 oz. 30c., oz. \$1.00.
Salvia Splendens, 1/4 oz. 35c., oz. \$1.25.
Salvia Bonfire, 1/4 oz. 75c., oz. \$2.50.
Lily Valley, Early Foreign, to close out, per 1000, \$11.00.
Fresh Tobacco Stems, Bale of 300 lbs. \$1.50.

W. C. BECKERT, Pittsburg, N. S. Pa.

March 28 and 29.—Travis & Park, one barrel plants; Vaughan's Seed Store, one case plants; McHutchinson & Company, 22 bundles trees; Russman, Galland & Weehmar, one bundle plants; J. L. Vandever, one bundle plants; Tice & Lynch, four cases trees and plants; August Walker & Sons, 24 cases plants, one bale plants, one case plants; C. C. Abel & Company, 21 cases plants; Ammermann & Patterson, six cases plants.

LAWN SAND—SAND MANUFACTURED.—Protest of W. W. Rawson & Co., Boston, heard before Board 3 of the General Appraisers, March 13, 1908. An article involved as climax lawn sand, which was classified as an unenumerated manufactured article under section 6, tariff act of 1897, was claimed to be free of duty under paragraph 671, relating to "sand, crude or manufactured." The following opinion was rendered by Waite, General Appraiser: " * * * This merchandise consists of a chemically treated, finely powdered sand, which is put up in tins and kegs and sold for the purpose of destroying weeds in lawns. According to the testimony of the importer and the advertisement on the tin which is in evidence before us, this sand will burn out the weeds if applied in a dry state; the subsequent application of water neutralizes the acid in the sand, converting it into a fertilizer.

"The report of the United States chemist on the article is as follows: 'Sand chemically treated with about 5 per cent. of green vitriol or sulphate of iron. The sulphate of iron is the active ingredient in the mixture, and is of value as a weed killer by reason of its astringent properties.' The vitriol seems to be the only foreign substance contained in the commodity, and this, we think, will not remove it from the provision in paragraph 671 for 'sand, crude, or manufactured.' The protest is therefore sustained and the collector's decision accordingly reversed. Note G. A. 5006 (T. D. 23319), in which the Board held that a sand which was colored black by the use of some organic coloring matter should be admitted free under paragraph 671."

Seed Trade Notes.

We are certainly destined to have a normal seed selling season; and it does seem good, indeed, to experience once more the old-time rush of March. The weather conditions almost everywhere are favoring the preparation of the ground for the crops, and the first early plantings; we are to have an early Spring, with all the many substantial benefits that go with it. So strong and steady are the orders coming, that even with night work and full time on Sundays by many houses, it is absolutely impossible to keep the orders up-to-date as regards filling.

In line with the advancing tendency of contract prices of practically all seeds for the sales of 1909, the growers of peas and beans are holding for and placing contracts at advances of from 25 to 50 cents per bushel above last season's rates. The explanation and cause of this is found in the steady and perfectly enormous demand of the vegetable canning industry. As a most prominent grower of garden peas said to the writer this week, "Of course, we growers are as always pushing for the bean and pea contracts of the seedsmen for the coming year; but you, of course, know times have and are changing, and what now keeps up the contract prices for beans and peas to a profitable level is the orders of the canners. No longer are we (the growers) obliged to accept, say, \$1.75 to \$2 per bushel on contracts for early peas—those days have forever gone let us hope; it is surely the canner who has saved the bean and pea growing end of the business from bankruptcy."

The retail over-the-counter cash order rush is very rapidly carrying off what little sweet corn our seedsmen have been holding in reserve for these profitable sales; and it certainly is very much to the credit of our seedsmen that they have not taken advantage of the situation and crowded up the retail prices of sweet corn and all the other short items.

Onion sets have reached the jobbing price I set for them to be April 1, many weeks ago; white sets are \$3.75 to \$4 per bushel, with red and yellow sorts \$3.25 to \$3.50. The demand for onion sets of all kinds is very active, but as far as red onion sets go they are becoming very scarce. Another price advance seems sure.

As regards Autumn bulbs, seedsmen, as a rule, are very carefully considering the situation before placing their orders with our Holland friends for hyacinths, tulips, crocuses, etc., for this Fall's trade. That orders for this class of stock given this year will be considerably contracted, as compared with the past two or three seasons, there can be no question. We may, of course, recover from the business depression effects of the recent panic sufficiently by another Fall to make a good bulb business possible, but at present seedsmen feel in a conservative mood regarding bulb purchases.

The market for grass seeds and clovers is still advancing; surely it has been years since both timothy and red clover were so high in price at the same time. When even the best grades must bring \$3.50 per bushel and 28 cents per pound respectively, no wonder customers hesitate a little.

European Notes.

Fifteen days of almost continuous rains in the seed growing districts of western France and a fairly liberal share of frost, snow and sleet in the district lying between Paris and the North Pole are not very stimulating to trade or to the development of our plants. Speaking broadly, the season so far as outdoor cultures are concerned is fully three weeks later than last year and temperatures remain steadily below the normal. Judging by last year's experience there will not be any settled fine weather until Easter, and that is still a far cry ahead.

Continuing our notes on flowers for florists, our cyclamen now make a magnificent display, and are full of promise for seed. The only special features to record are, first, the growing popularity of the salmon-tinted sorts. While the greater number of varieties of this tint are offered in England, both France and Germany are in the running. Up till now the size of the flowers of the best variety is not more than two-thirds of that of *C. grandiflora alba*. The color is very effective by artificial light.

The second point is the great improvement in the size and form of the flowers of the fringed or Papilio section. Plants recently exhibited by some of the English growers are equal in every respect to the best *grandiflora* strains. The firm of Vilmorin is offering as a novelty a sweet-scented variety, but cyclamens with scented flowers have been well known to the writer for nearly fifty years and one at least of the London wholesale firms catalogued corms of this variety in the early seventies.

A great effort is making to popularize the so-called cactus cineraria, but despite several excellent displays from the cultural standpoint the plant does not catch on.

The outlook for novelties and specialties for 1909 will soon commence. Enterprising seedsmen in settled localities would do well to offer roots of the lovely *Incarvillea Fargesii*. It is a distinct species from Northern China, dwarfier than *I. Delavayi* and with flowers very much larger. The color is a rich deep crimson, with a beautiful clear white and yellow throat. The plant is easy of cultivation in sandy loam. Seed will no doubt be offered a little later on. When not in bloom the plant is quite equal in decorative value to many ferns.

It is a big drop from florists' flowers to the clover market respecting which very little has been reported lately because nothing worth reporting has occurred. Trade in this article is practically stagnant because holders of prime yearling seed refuse to part with it unless they obtain what they consider to be its full value. Dealers who have an export trade affirm that all now in store could easily be exported to your side at more reasonable figures, but holders are firm in the belief that buyers must ultimately submit, and appear to be utterly oblivious of the fact that sowing time will soon be over. Only red clover is referred to in the foregoing; the other varieties do not call for any comment.

Henry Nutting, partner in the firm of Nutting & Sons, London, died from heart disease on March 18, surviving his wife just 26 days. Although he had for some time past suffered from *Anzina pectoris* he was able to be in the trial garden the day before his death and wrote a very cheerful letter to his firm in the evening. He was the younger of the two sons of W. J. Nutting, who severed his connection with the firm of Flanagan, Chubb

& Nutting in 1842 and started a wholesale seed business of his own at 46 Cheapside, London. He married a daughter of Mr. Flanagan, also a seed merchant at Mansion House street, London. The latter firm has been out of existence for many years. EUROPEAN SEEDS.

DUTCH BULB GROWERS' SOCIETY OF HAARLEM (HOLLAND).—Since January fortnightly meetings have been organized by this society, at which new and interesting bulbous plants may be shown for certificates and awards. The following awards have hitherto been given. First-class certificate for single early tulip, Brilliant Star, orange scarlet with black base; for Tulipa *Posteriana*, a species with enormous scarlet flowers with yellow or black base; and for *Hippeastrum procerum*, a scarce, mauve-colored species. Awards of merit for single early tulip *La Reine des Reines*, lovely pink; and for single early tulip *Hermann Schlegel* or *Primrose Queen*, a sport from the well-known *La Reine*, flower light sulphur, shaded white. Gold medal for a group of new seedlings of *Freesia Tubergeni*; and silver medals for groups of forced single and double tulips and *Darwin* tulips.

Standard Classification of the Dahlia.

As adopted by the New England Dahlia Society.

Dahlias are double, semi-double or single.

A.—DOUBLE DAHLIAS consist of a close mass of ray florets and in their perfect form show no central disc. They include three types:

I.—The globular or show type, approximately spherical in shape, having florets nearly equal in length and breadth, often quite circular and always incurved, rolled or cupped.

II.—The decorative type, having flowers flat or approximately so, with flat florets.

III.—The cactus type, distinguished by long relatively narrow florets rolled back.

POMPON OR LILIPUTIAN dahlias are small-flowering varieties of the double types.

B.—SEMI-DOUBLE DAHLIAS have two or more rows of ray florets surrounding a well defined central disc.

C.—SINGLE DAHLIAS have a single row of ray florets surrounding a central disc. The typical single dahlia has eight such florets.

Plain flowers have but a single color, or if bi-colored have the ground color lighter than the tips.

Fancy flowers are striped or have the ground color darker than the tips. This distinction applies to all types.

Recognized classes for exhibition are:

SHOW DAHLIAS.

- a—Plain.
- b—Fancy.
- c—Other sub-divisions.

DECORATIVE DAHLIAS.

Any sub-divisions.

CACTUS DAHLIAS.

Any sub-divisions.

POMPON OR LILIPUTIAN DAHLIAS.

Any sub-divisions.

SEMI-DOUBLE DAHLIAS.

- a—Holland Peony-Flowered.
- b—Any other sub-divisions.

SINGLE DAHLIAS.

- a—Collarette.
- b—Anemone-Flowered.
- c—Giant-Flowered.
- d—Any other sub-divisions.

The above is simply a classification, and should not be misconstrued. In the April issue we shall publish a set of rules for judging in connection with a schedule for our Fall exhibit, in which will be enumerated all such varieties of dahlias or types which should be classed as "other sub-divisions."

We intend for once to do away with the annually occurring disputes and arguments on the right of exhibiting certain dahlias, such as Mrs. Chas. Turner, in either the class of cactus or decorative, or both.—*Dahlia News* for March, 1908.

CABBAGE PLANTS

Jersey Wakefield, ready for field, \$1.25 per 1000. Tomato, all kinds, \$1.50 per 1000.

DREER'S HARDY PERENNIALS

Largest assortment of desirable varieties. Plants of proper size to give best immediate results. For complete list of varieties see our current wholesale list.

Many planters not thoroughly familiar with this class of plants have an idea that nothing but a large, field-grown clump will give satisfactory returns for the season. This, as experience has taught us, is in most instances a mistake. A vigorous plant of proper size will, in nearly every case, give quicker and better returns than the best so-called "field clumps" that can be procured.

NURSERY DEPARTMENT.

Conducted by Joseph Mcchan.

AMERICAN ASSOCIATION OF NURSERYMEN.

J. W. Hill, Des Moines, Ia., president; C. M. Hobbs, Bridgeport, Ind., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

Sea Buckthorn, Hippophae Rhamnoides.

A beautiful shrub when in berry, yet one rarely met with in collections, is the sea buckthorn, Hippophae rhamnoides, a native of England as well as of some parts of Asia; the Asiatic one differing but little from the English. The beauty of this shrub lies in its orange colored berries, which are closely set around its shoots, ornamenting the bush greatly in Autumn and early Winter. This fine shrub is quite hardy with us, and no doubt it would be oftener seen than it is were it not for the fact that its male and female flowers are borne on different plants, hence those who have but a single bush of it get no berries. In fact, if one had two or three plants it might be that there would be no berries, as all might be of the one kind. When propagated from seeds, several plants should be set out together, three or four, when the chances would be that both sexes would be among them.

Nurserymen often propagate them from layers. In this case, if the two sexes are known, a group of two or three of the female with a male plant in the center would give a clump of berried plants of great beauty.

The Monkey Puzzle, Araucaria Imbricata.

A friend who writes from Kentucky asks if we think the Araucaria imbricata would succeed on his place in Delaware, a few miles below Wilmington. While we think it doubtful of thriving there, were the case ours and we had a well sheltered place for it, and near the Delaware River, we would certainly try the plant. This curious evergreen will survive the mercury falling to 15 degrees or so for a night or two, but to freeze so much day after day through the Winter, sometimes for weeks at a time, might be its undoing. The proximity of large bodies of water is a great help to it. Record has been made of a small plant of it which passed through more than one Winter in the old nursery of Robert Buist, along the Schuylkill, in Philadelphia, but it probably succumbed to the cold at last. No doubt a little south of Delaware this araucaria could be grown in certain protected places. There are records now of its succeeding in the warmer parts of Tennessee. It would be very interesting to have word from our readers as to how far north they know of its thriving.

In British Columbia it is a popular evergreen; the climate suiting it well; and all gardeners from Europe know how it adorns the lawns in so many places there.

Autumn Fruiting Raspberries.

Many years ago attention was given to the cultivation of the Autumn fruiting raspberries, but whether it was that the experiments were not satisfactory or lack of interest in the subject that caused the disappearance of the plants from cultivation, we are unable to say. There were two prominent sorts at that day—the Belle de Fontenay and the Marvel of the Season—both European kinds, and then the Catanissa was also classed as a Fall bearing one. The latter belonged to the black cap section.

In England these Autumn-bearing sorts are still esteemed and cultivated, the name Belle de Fontenay appearing in the list of sorts, together with two others—October Red and October Yellow—varieties not known here that we are aware of.

The Autumn sees such a lot of fruit of all kinds here that plants out of season, such as Fall-bearing raspberries, do not seem to be as much appreciated as they would be were fruit scarcer. Still, the curiosity of raspberries in late Autumn would make many wish to have such late kinds in their gardens.

These Autumn-bearing kinds need different pruning from those that fruit at the ordinary period. The berries come on the young shoots of the same season; the rule is to cut all the canes to the ground in late Winter or early Spring. When the plants are vigorous the cutting down causes strong shoots to spring up, and these bear the fruit. The Autumn-bearing depends on the cutting down in Spring; in fact, the common raspberries will sometimes bear in Autumn when treated in this way.

Two of the Earliest Blooming Shrubs.

The Jasminum nudiflorum, Lonicera Standishii and L. fragrantissima are early flowering, but none of these is strictly a shrub. The jasminum is a vine, and both the loniceras are of a straggling, half climbing habit.

Among good old standbys in real hardy shrubs that bloom early the Cornus Mas and Daphne Mezereum are reliable. At this writing, March 26, both are in full display of flower. The cornus has small, yellow blossoms set all along its shoots. The flowers are not large, but they are so numerous that the display a bush makes is discernible a long way off.

The daphne exists in both white and pink varieties. It is thoroughly hardy; and, as said, it is now in full display. The white one is a cream white; and the flowers of the daphne are also arranged along the length of the last year's shoots, as are those of the cornus. The value of the daphne is helped by the sweet perfume of its flowers. Children call it "honey scented." In a room a plant when in bloom perfumes the whole space. It is a wonder florists having a city trade do not take up this daphne as a hardy, sweet-scented shrub for selling to their customers. Why, if some of the

State Florists' Association... The Berckmans... golden foliage...

It is not done in the State... of Arbor vita... In the warmer States... frostings are not too early... for pot culture there are many varieties...

This is the season to pot them... They are then ready for Summer use... for use in tubs on lawns... in better condition for later sales...

Popularity of the Rose of Sharon.

An old-time favorite shrub which holds its popularity well is the rose of Sharon, Hibiscus syriacus, the althea, as so many call it. There are many reasons for its extensive planting. It exists in great variety; probably twenty five distinct kinds are carried on the lists of many nurserymen, and at any time from Midsummer until frosts come there are flowers to be had from one kind or another. There are early flowering sorts and late blooming ones, so that, ordered of the right kinds, one or the other will display flowers covering the period named. What adds to the value of this shrub is the fact that it never grows too large. If permitted to grow at will the rose of Sharon makes almost a little tree. On grounds some of this kind may be seen ten feet high and with thick limbs, but the fact is, that one need not have them over any height less than that given, because they not only endure severe cutting back, but actually are the better for it. The flowers come from the new shoots of the same season, so cutting back in late Winter should be done. The strong shoots which follow give fine flowers. It follows that the althea can be planted anywhere without a thought of its growing too large for the position.

The variegated leaved althea, Brist's variegated, makes a beautiful shrub, the variegation being so distinct and the foliage standing out hot Summers well. This one bears dark crimson flowers which never entirely unfold a feature, some think, which rather adds to its value instead of detracting from it.

What has been said of the pruning of this shrub applies with equal force to the well known Hydrangea paniculata grandiflora. It may be permitted to become a large bush if desired, but the best flowers come from bushes kept low by annual pruning back.

Memorial Day Flowers.

Memorial Day flowers are looked on as such as can be utilized for cemetery uses on that day. Grand Army Posts are still the largest users of flowers then, and what they employ in the bouquet line are largely of the character of hardy shrubs. Of all the shrubs blooming at that time none approaches in usefulness the snowballs and the weigelas. These are the mainstays of many Posts, the foundation of the bouquets they use. A few other flowers are utilized with them, but when the snowball and the weigelia can be had, there is hardly a bouquet that does not contain them.

As years go by and the number of graves increases, large quantities of flowers are required and so great is the call that it has become almost impossible to keep up the custom of placing a bouquet on each grave, and pot plants are being substituted.

With the snowballs and the weigelas mentioned, such flowers as iris, veronica, peonies and many herbaceous plant blooms are always useful, but those of a very succulent nature are no good, flagging too quickly. This, in fact, holds good with some of the shrub species. It is always warm at the Memorial Day season, and unless the flowers are of a large nature, they almost disappear in a few hours of hot weather.

Even in design work, as the pieces are usually of a large character, the snowball, the weigelia, the peony and like flowers are much in evidence, together with the usual florists' flowers.

Some of the Philadelphia cemeteries now contain over 1,000 graves of veterans of the war, so it will be understood what a demand Memorial Day creates. It is not alone the G. A. R. Posts that need flowers, it is now the general custom of others to be at the cemetery lots on that day. Joseph H. ...

Hibiscus Syriacus, The Rose of Sharon.

Photo by W. H. Waite.

large department stores could be assured of a number of the plants in pots, more than likely they would engage them. The shrub is never of a large size, being seldom seen more than 3 or 4 feet in height; and when but a foot high it will flower. The common name, "garland flower," is sometimes applied to this daphne, but its application is not apparent.

The Beautiful Gordonia Tree.

One of the rarest of small trees and at the same time one of the most beautiful is the Gordonia pubescens, known as the Franklin tree, at one time having been called Franklinia pubescens. It commences to flower when quite young; plants three feet high will often bloom, and every year of its life thereafter it flowers beautifully. The blooms are like a large single white camellia, having a cluster of yellow stamens in the center, and these flowers are produced from August until November or until freezing weather comes. This lovely tree need not be so rare were its propagation attempted by those who possess a plant of it, as it roots from layers, also from green wood cuttings, made in Summer, and placed in a greenhouse. About the close of August is a good time to make such cuttings, and in a short time they root. Some prefer to grow the young plants in pots altogether until of some size, then plant them outdoors. The most suitable place seems to be a half shady, moist one, with deep soil.

Chinese Arbor Vitae for the South.

Those of our florists and nurserymen who have a Southern trade would find the Chinese Arbor vitae and its varieties good evergreens to recommend and grow for this purpose. This particular species is far more at home in the South than in any of the Northern

The Proposed Pure Seed Act.

Subjoined is the full text of the Mann Pure Seed Bill, briefly referred to in last week's issue:

A Bill to Regulate Commerce in Adulterated and Misbranded Seed and to prevent the sale or transportation thereof, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the introduction into any State or Territory or the District of Columbia from any other State or Territory or the District of Columbia or from any foreign country or the shipment to any foreign country of any seed or bulbs adulterated or misbranded, within the meaning of this Act, is hereby prohibited; and any person who shall ship or deliver for shipment from any State or Territory or the District of Columbia to any other State or Territory or the District of Columbia or to a foreign country, or who shall receive in any State or Territory or the District of Columbia from any other State or Territory or the District of Columbia or foreign country, and having so received shall deliver or offer to deliver, in original unbroken packages, for pay or otherwise, to any other person any seed or bulbs adulterated or misbranded within the meaning of this Act, or any person who shall sell or offer for sale in the District of Columbia or any Territory of the United States any such adulterated or misbranded seed or bulbs, or export or offer to export the same to any foreign country, shall be guilty of a misdemeanor, and for such offense be fined not exceeding two hundred dollars for the first offense, and for each subsequent offense not exceeding three hundred dollars or be imprisoned not exceeding one year, or both, in the discretion of the court. The Secretary of Agriculture shall make uniform rules and regulations for carrying out the provisions of this Act.

Sec. 2. That the term "seed" as used in this Act shall include all vegetable, flower, cereal, grass, clover, forage plant, and other agricultural and horticultural seeds intended for seeding purposes.

Sec. 3. That for the purposes of this Act seeds and bulbs shall be deemed to be adulterated:

First. If seed purporting to be orchard-grass seed contain more than two per centum of seed of rye grass or meadow fescue; if seed purporting to be Kentucky bluegrass seed contain more than two per centum of seed of Canada bluegrass; if seed purporting to be red-clover seed contain more than two per centum of seed of yellow trefoil; if seed purporting to be alfalfa seed contain more than two per centum of seed of yellow trefoil, burr clover, and sweet clover singly or combined; or if any seed or bulbs purporting to be of one kind or variety contain more than two per centum of another kind or variety, such other seed or bulbs being similar in appearance or of lower market value; Provided, That no seed or bulbs shall be deemed adulterated within the meaning of this paragraph when it is accompanied by a statement or label in the form and manner prescribed by the rules and regulations in this Act provided for, giving the name and amount or proportion of each of the kinds or varieties of seeds or bulbs contained therein.

Second. If seed of red clover, alsike clover, alfalfa, or Egyptian clover contain seed of dodder; or if any seed contain weed seed, rendering it unfit for seeding purposes; Provided, That the provisions of this paragraph shall extend only to seed intended or offered for export to or imported from a foreign country.

Third. If any seed or bulbs contain, respectively, dead seed or dead bulbs or any other matter materially reducing the value for seeding or planting purposes; Provided, That this paragraph shall extend only to seed and bulbs intended or offered for export to or imported from a foreign country.

Fourth. If there shall be added to seed any weed seed or dead seed or any other matter materially reducing its value for seeding purposes.

Sec. 4. That for the purposes of this Act seed and bulbs shall be deemed to be misbranded:

First. When one kind or distinguishable named variety of seed or bulbs shall be offered for sale under the name of another kind or distinguishable named variety of seed or bulbs.

Second. If in package form, and the contents are stated in terms of weight or measure, they are not plainly and correctly stated.

Third. If the article be falsely labeled or branded as to the State, Territory, locality, or country in which it is raised or produced.

Sec. 5. That no dealer shall be prosecuted under the provisions of this Act

when he can establish a guaranty signed by the wholesaler, jobber, or other party residing in the United States from whom he purchases such articles, to the effect that the same is not adulterated or misbranded within the meaning of this Act, designating it. Said guaranty to afford protection of the party or parties making the sale of such articles to such dealer, and in such case said party or parties shall be amenable to the prosecutions, fines, and other penalties which would otherwise attach in due course to the dealer under the provisions of this Act.

Sec. 6. That the Secretary of the Treasury shall deliver to the Secretary of Agriculture, upon his request, from time to time samples of seed and bulbs being imported into the United States or offered for import, giving notice thereof to the owner or consignee, who may appear before the Secretary of Agriculture and have the right to introduce testimony, and if it appear from the examination of such samples that any seed or bulbs offered to be imported into the United States is or are adulterated or misbranded within the meaning of this Act, or is or are otherwise falsely labeled in any respect, or is or are of a quality forbidden entry into or forbidden to be sold or restricted in sale in the country from which exported, or is or are intended for adulteration purposes, the said seed or bulbs shall be refused admission under such regulations as the Secretary of the Treasury may prescribe: Provided, That the Secretary of the Treasury may deliver to the consignee such seed or bulbs, pending examination and decision in the matter, on execution of a penal bond for double the amount of the full invoice value of such seed or bulbs, together with the duty thereon, and on refusal to return such seed or bulbs for any cause to the custody of the Secretary of the Treasury when demanded, for the purpose of exclusion from the country, or for any other purpose, said consignee shall forfeit the full amount of the bond.

Sec. 7. That the term "Territory" as used in this Act shall include the insular possessions of the United States. The word "person" as used in this Act shall be construed to import both the plural and the singular, as the case demands, and shall include corporations, companies, societies, and associations. When construing and enforcing the provisions of this Act, the act, omission, or failure of any officer, agent, or other person acting for or employed by any corporation, company, society, or association within the scope of his employment or office, shall in every case be also deemed to be the act, omission, or failure of such corporation, company, society, or association as well as that of the person.

Sec. 8. That this Act shall be known, described, and designated as the Pure Seed Act of 1908.

Sec. 9. That this Act shall take effect and be in force upon the expiration of six months after its passage.

The bill (H. R. 13835 first session of the 60th congress) introduced by Representative Mann of Illinois, January 15, 1908, was referred to the committee on interstate and foreign commerce and ordered to be printed.

On March 20 the bill was reported with amendments, referred to the house calendar, and ordered to be printed.

PRICE, \$1.50
The FLORISTS EXCHANGE, 2-8 Duane St., New York

NEW CANNAS 1908

ROSEA GIGANTEA

This beautiful variety has extra large flowers which are borne in such abundance that the mass of color on each plant is amazing. Single petals are 2 1/2 inches across; color, a deep rich rose, almost a coral carmine. Plants make a vigorous growth, producing unusually fine clumps of green foliage. Height, 4 feet. (A great favorite with visitors to our trial grounds.) Strong plants, \$2.00 each, prepaid; \$18.00 per doz. by express, not prepaid.

GLADIO-FLORA

Remarkable for the unusual shape of the flowers, which look like large Gladiolus. Petals are not long, but short and rounded and so wide they overlap

each other, thus giving a very attractive appearance to the flowers. Color is crimson, changing to carmine rose with an uneven edge of gold to each petal. Height, 3 1/2 feet. Price, strong plants, \$2.00 each, prepaid; \$18.00 per doz., by express, not prepaid.

CANNA METEOR

Meteor is a vigorous grower with healthy green foliage. It is highly valued because of its magnificent flowers, fully four inches across, and abundance of bloom. Color is a deep crimson, very rich; each plant usually throws up five to six trusses of buds which continue blooming luxuriantly all Summer through. Price, plants or dormant roots, 75c. each, postpaid; \$5.00 per doz., by express, not prepaid.

NEW CANNAS OF SPECIAL MERIT

WILLIAM SAUNDERS

(1907) The flowers are large, of splendid form and are borne very freely in immense clusters. The color is a deep rich shining scarlet lightly dappled with crimson. Foliage is a rich bronze

Height, 3 1/2 to 4 feet. We believe that Wm. Saunders is decidedly the most perfect canna of this type that has been introduced. Those who tried Wm. Saunders in 1907 say it cannot be excelled. We offer plants only: 60c. each, postpaid, \$5.00 per doz., \$35.00 per 100, by express, not prepaid.

60 other Varieties. Send for list and prices

R. H. MURPHEY'S SONS, Urbana Ohio

FLORISTS have a splendid opportunity of raising Mushrooms by utilizing the waste space under the benches, and then utilizing the waste material of expended mushroom beds in growing flowers. Lamport's Pure Culture MUSHROOM SPAWN, the best Mushroom Spawn in the market, is sold by all leading seedsmen. A fresh sample brick, enough for a small trial bed, together with large illustrated book on "Mushroom Culture," will be mailed postpaid upon receipt of 40c. in postage stamps. American Spawn Company, St. Paul, Minn.

H. P. ROSES

Splendid quality and large assortment of leading sorts, \$10.00 per 100, \$90.00 per 1000. Dorothy Perkins Roses, 3 years, extra strong, \$7.50 per 100. J. W. ADAMS & CO., Springfield, Mass.

NEPHROLEPIS AMERPOHLI

PHILADELPHIA LACE FERN

\$12.00 per 100, \$100.00 per 1000. 5% off cash with order.

These are good strong plants that were potted November and December last.

We need the room and must move them.

Also a fine lot of 6 1/2 inch pots at 75 cents each, 25 or more at 70 cents each.

This is the most talked about fern of the lot and has been awarded a great many honors, including a medal by the Royal Horticultural Society of London and the "Kitt Cup" by the Pennsylvania Horticultural Society for the most meritorious new plant introduced in 1907.

Equally as good as green for cut flowers or pot culture.

The stock here offered is in superb condition.

WILLIAM P. CRAIG, 1305 Filbert Street, Philadelphia, Pa.

FERNS

MY SPECIALTY

HAVE LILIES FOR ALL

Have lilies, the best in the land. the best in the land, the best in the land.
Azaleas, the finest colors to beat the band, to beat the band, to beat the band.

If you would know the fairest sight your eyes can ever see, Where the most perfect plants are grown, to Aschmann come with me, Why, ne'er since flowers began to bloom was such a glorious show Of all the best that florists need, found in one place to grow. The lilies are the very best yet seen on Easter Day; Azaleas are whole sheets of flowers, perfect in every way. The araucarias matchless are; so are the ferns all green, With bulbs and plumed spires, the best you've ever seen And Aschmann gives a challenge, let every florist hear. For flowers or prices either, no rival does he fear. If you wish to gather dollars, like violets in the Spring, Then send your largest order—his plants the cash will bring.

An immense stock of choice Easter Plants, blooming Easter week or earlier if desired, are now ready for immediate shipment. Never mind about that nonsense hard time talk. Everybody wants plants for Easter, and no joke about it. Our reputation from Atlantic to Pacific in shipping Easter plants for the wholesale market the last twenty years is sufficient ground that we mean business, and have what we advertise.

Have Azalea Indica to beat the band. We take the lead in the American market for them. We never so nice as this year—good foliage well ludded. We make a specialty of importing every year an immense stock of the choicest varieties, popular in America, grown under contract for us by an azalea specialist in Ghent, Belgium. If you need azaleas, do not look in vain around the country for bargains, but come or write direct to us. We will be able to supply you with the best obtainable for the American market, in medium sizes, full of buds, in good healthy condition, right for Easter.

All our azaleas are planted in 6 and 7 in. pots as soon as they arrive in October from Belgium. In justice to all our azalea buyers, we do not sell any in the Fall (having the best picked out for Fall trade), but keep them all for Christmas and Easter orders. We have a whole house full of Mme. Van der Cruyssen (best double pink) that makes your mouth water, all as round as an apple, covered with buds, 60c., 75c., \$1.25, \$1.50, \$1.75 and \$2.00 each. Next we have Simon Mardner (double pink), Verveenaena (rose variegated double), Deutsche Perle (white), Niobe (double white), Bernard Andrew alba (double white), Prof. Walters, Empress of India (double variegated), Apollo (red), and about 6 more varieties.

All goods must travel at purchaser's risk. To save express charges, please mention if plants are to be shipped in or out of pots. Cash with order, please. Strictly no references can be investigated in such busy shipping seasons.

GODFREY ASCHMANN
Importer, Wholesale Grower and Shipper of Pnt Plants.
1012 W. ONTARIO ST. PHILADELPHIA, PA.

PLANT CULTURE
PRICE \$1.00.

A. T. DE LA MARE PTG. & PUB. CO.
2 DUANE STREET, NEW YORK

Prices Advertised in these Columns are for

Price: 60c., 75c., \$1.00, \$1.25, \$1.50, \$1.75 and \$2.00 each. Only large sizes of Bernard Andrew alba, at \$1.00, \$1.25, \$1.50 and \$2.00 each.

Easter Lilies, Japan Multiflorum, of our own importation, raised from best 10 in. bulbs obtainable. Have the finest lot this year we ever had any season; showing buds now; just right for Easter. Medium sizes 13 in. to 40 in., 10c. per bud for plants over five buds, and 12c. per bud for plants under five buds. About 5000 good plants to offer. Owing to fact that demand every year exceeds supply, kindly send order early as possible.

On account of there being so many diseased bulbs among those obtained from Japan, which have to be thrown out the cultivation of lilies is no longer profitable, therefore we ask our customers to order a reasonable amount of azaleas and other stock when ordering lilies.

Cineraria, Hybrid Grandiflora, best improved strain, 5 in., \$2.00 per 100; 6 in., \$3.00-\$4.00-\$5.00 per doz.; right for Easter, in bud, partly in bloom now.

Hyacinths of my own importation, raised from first-class bulbs only. King of the Blues, dark blue; Giant Maitre, lavender blue; Gertrude, pink; La Grandis, white, 4 in. pots, \$12.00 per 100. My hyacinths cannot be compared with those raised from poor, cheap bulbs flooding the market.

Toucan Tulips. This variety is the best double red and yellow variegated, and sells at sight. It is valuable because it will remain open in good condition for 10 days. Price: 2 bulbs planted in a 4 in. pot, \$1.50 per doz., or \$12.00 per 100 pots.

Von Zion Daffodils. This is the best double yellow narcissus on the market; good seller, 3 double-sized bulbs planted in a pot, 5, 5 1/2 to 6 in. pots, price, \$2.00, \$2.50 to \$3.00 per dozen pots.

Roses, Hybrid and Hermosa, 5 1/2 in. pots, two to three feet high, grafted stock, in bud, 10c. 50c. each.

Paris Daisies 5 1/2 in. pots, 25c. each. Moon Vines, or the well-known Pomona Multiflora, which produces flowers as big as a saucer from bloom, very fragrant, and for which I have a reputation as grower and shipper all over the country for the last twenty years, now ready, 2 1/2 in., \$5.00 per 100.

Araucarias Robusta, Compacta and Excelsa. A perfect marvel of nature. We are one of the heaviest importers and growers of this beautiful decorative plant, the Araucaria. Prices: 6-7 in. pots, 6-year-old, 4-5-6 tiers, 28 to 40 in. in height, the same in width, only \$3.00; 6-7 in. pots, 6-year-old, 4-5-6 tiers, 25 to 28 in. high, \$2.00 and \$2.50; 6-7 in. pots, 5-year-old, 3-4 tiers, 18 to 25 in. high, \$1.50 to \$1.75. Excelsa, 6 in. pots, 5-year-old, 5 tiers, 22 to 25 in. high, \$1.00; 6 in. pots, 4-5 tiers, 4-5-year-old, 18-20-22 in. high, 75c.; 5 1/2 in. pots, 3 to 4 tiers, 8-10-14 in. high, 50c. each.

Ferns. Raised in pots, not lifted from benches. Nephrolepis Scottii, 6 in. pots, 50c. to 75c.; 7 in. pots, \$1.00 each.

Nephrolepis Piersoni, 5-5 1/2-6 in. pots, 35c. 10c., 50c.

Nephrolepis Bostoniensis, 8 in. pots, made up of three plants as big as a washub, \$1.25 to \$1.50; 7 in. pots, 75c. to \$1.00; 6 in. pots, 50c.; 5 to 5 1/2 in. pots, 30c., 25c., 40c.

Nephrolepis Whitmani, 8 in. pots, as big as a washub, \$1.25 to \$1.50.

Ferns for Dishes, 3 in. pots, 7c. each. Amerpohl, the new lace fern, 5 1/2 in. pots, 50c. and 70c.

Kentia, Forsteriana and Belmoreana, 4 in. pots, 20 in. high, 25c.; 5 1/2 in., 5 1/2 in., and 6 in. pots, bushy, stocky plants 50c., 60c., and 75c.

Latania Borbonica, 5 in., 20c.

Cocos Weddelliana, 3 in. pots, 10-12-15 in. high, 15c.

Ficus Elastica or Rubber Plants, home grown and Belgium stock, 18-20 to 40 in., 5-5 1/2 to 6 in. pots, 35c., 40c., 50c., 60c., each; 7 in. pots, 75c.

Begonia Flambeau, sells at sight 5 1/2 in. pots, 25c.

Begonia, new improved Erfordi, 4 in. strong, 20c.; 5 1/2 in., 25c. each.

Primula obconica, in bloom, 5 1/2 in. pots, 25c. each.

Hydrangea Otaksa. This is the best pink variety, already in bud, just right for Easter, 6 to 7 in. pots, 10c. 50c., 75c., \$1.00, \$1.25 each.

Spirea Gladstone. We offer only large stock. Our own importation, 6-7 in. pots, in bud now, just right for Easter, 50c., 75c., to \$1.00 each.

10,000 Hardy English Ivy

—AT—
\$5.00 per 100; \$40.00 per 1000

They are fine stock. Tops 1 1/2 to 2 ft., one to three stems to a plant, densely clothed with foliage in perfect condition. Just the thing for hanging baskets, stands, boxes, etc.

J. T. LOVETT
LITTLE SILVER, N. J.

CYCLAMEN

Splendens Gigantum Hybrids. Finest strain in the world, perfect flowers of Giant type in five true colors, twice transplanted from flats, \$3.00 per 100, \$25.00 per 1000; plants from 2 1/2 in. pots, \$5.00 per 100, \$45.00 per 1000.

CANNAS
Alphonse Bouvier, Florence Vaughan, Chas. Henderson, Chicago, Papa, Egandale, J. D. Cabos, Queen Charlotte from 3 in. pots, \$1.50 per 100, \$40.00 per 1000; started from sanded, \$3.00 per 100, \$25.00 per 1000.

EVENDEN BROTHERS, Williamsport, Pa.

THE WEEK'S WORK

Timme's Timely Teachings.

Dahlias.

The beginning of April is about as correct a time for the rooting of dahlia cuttings, the starting of root divisions for that sort of trade and the sowing of seeds for still another phase of the business, as it is possible for the interest of the grower to lit upon after years of arduous endeavor to avoid being either too early or too late. For the propagation by cuttings, of course, roots must be started into growth a week or two sooner, so as now to be able to begin taking off the first batches of cuttings. These roots, stock plants like others, cannot be expected to produce good material for propagation, unless given an opportunity to do so by cultural encouragement, a favorable position, in a warm, well-lighted house, of the bench or the boxes in which they are planted and regular attention to keeping up the required degree of moisture. The length of the newly made growth, which renders it fit to be taken off and rooted, is not the same with all varieties of dahlias; but, as with most soft growth cuttings, so here also it is well to bear in mind that long and especially lanky shoots, necessitating an almost midway cut below a joint, are least likely to root or, if they do, to grow into as fine plants as the short-jointed, sturdy shoots, not much over two inches in length, not cut off but forced off sideways by finger pressure and inserted as they are without ever being allowed to wilt. These will root in about two weeks the entire hundred per cent., and should then be potted up, and as they become established be gradually inured to outdoor conditions. A similar course of treatment suits the seedlings, easily raised and much liked by some people who prefer the single forms to any other better known type of dahlias. The dormant roots and started root divisions are not the stock the public has need to call for at the professional florist's, since every dilettante seems to have solved the problem of successfully carrying through the winter the roots of dahlias, while, on the other hand, in the wintering over of canna roots, however cautiously hoarded, the average householder invariably fails.

Cannas.

Good varieties of canna continue to be much called for and are exceedingly profitable stock every Spring. Three or four potted plants, displaying some top growth, is the kind of stock to offer. Anything in cannas started too early is apt to shoot up into a tall, shabbily appearing and usually flowerless stalk, a thing that nobody wants. To have cannas of certain kinds in bloom and perfect condition as show plants somewhat early is, indeed, a good plan, but requires greater care than is necessary in the forwarding of the general run of bedding stock. Clumps of canna roots, guarded against shriveling, decay or premature growth up until now, firm and solid every piece of them, should show the beginnings of new growth. If this is the case, the clumps, freed of the old soil still clinging to them, are cut up into as many pieces as there are crowns, allowing as near as possible a fairly good piece of root to each crown or cluster of crowns if extra fine plants are wanted, but at the same time trying to have these divisions no larger than is necessary, so as not to go beyond the size easily held and grown on in 3 or 4-inch pots. Pieces of roots, thus falling away in trimming down divisions, are placed in moss or earth either in boxes or some empty bench, are kept warm and moderately moist, and all, or the larger number of them, will push up shoots from latent eyes and are then also ready for being potted up and grown into saleable plants, a method to be adopted also in the case of clumps too backward in distinctly visible top growth for immediate division. Varieties wherever placed should be plainly labeled.

Christmas Solanums.

Cuttings from left-over plants of Jerusalem cherries root readily and also grow into berry-bearing specimens by next Winter, but are never as finely formed plants as those raised from seeds, though it usually requires two Summer seasons of good field culture to grow these latter

When Writing Please Mention THE FLORISTS' EXCHANGE.

into exceptionally fine and amply berried bushes. But it pays to proceed in this manner, as experience has shown. The seeds, sown either in trays or hotted at this season, are quick in sprouting, and the seedlings, once transplanted or potted up, rapidly grow into nice plants, big enough to go into the field at the proper time; or, if this suits the grower better, to be grown on with occasional shifts under continual pot culture a plan circumventing loss of leaves through lifting from the field in the Fall, an operation most bitterly resented by Jerusalem cherries unless performed with the greatest of care. A sowing of celestial peppers could well have been made some weeks ago, although it is by no means too late to start seeds now, should the raising of a goodly lot of these easily grown Christmas plants be on the season's program. Celestial peppers under materially the same treatment as advised for Jerusalem cherries, attain salable size in one season, all pot culture being resorted to in their case.

Campanulas.

Canterbury bells in all the varieties and colors to be had deserve in fullest measure the popularity which won for themselves a conspicuous place among hardy herbaceous plants in every garden. They are raised from seeds, sown thinly in a nicely prepared bit of ground out of doors from about now until the end of May. The seeds are so small and to be had at such a trifling cost that oft-repeated warnings against scattering too lavishly seeds of this character over the soil in sowing them seem necessary to restrain the less experienced from wasting seeds and spoiling seedlings. Sown as early as this the seedlings of Canterbury bells will be ready for being set out in the field by the end of May, will be strong bushes in the Fall and flowering plants the following Spring. As such they meet with ready sales at good prices. If the grower has never flowered these campanulas under glass he is likely to be deceived as to their possibilities under indoor culture from what he sees them do in the open. Let him bring in fifty, a hundred, yes, a thousand of the wintered-over clumps now, plant them firmly into a bench with at least six feet of free headroom—preferably a solid bed—water them well, tie up the fast advancing flower stalks where this is needful, and some time about Memorial Day or school commencements he will begin to reap the reward for his labor, an article in cut flowers, selling as fast as he can ship them, quite different from what it is possible to make Canterbury bells produce in open air culture.

Snapdragons.

Another instance of greatly enhanced value of the cut product by indoor culture is to be found in the case of snapdragons. These are now grown quite extensively, and their culture, simple and in no sense hazardous, is so well understood at present that it seems needless to go into the subject any deeper than merely remind growers that seeds started now, or cuttings taken from selected flowering plants at this season of year, can most readily be grown into prolific stock for next Winter. Constant pot culture is to be preferred until hunched to the open field, since they suffer a severe setback in being lifted in the Fall.

FRED. W. TIMME.

READY NOW

THE NATIONAL FLOWER SHOW, under the auspices of the S. A. F. O. H., will be held at Chicago, November 6 to 15, 1908. William F. Kasting, Buffalo, N. Y., is chairman of the show committee.

Catch This Swindler.

An individual, who signs himself "J. or I. O. Fuller, Rep.," is operating among the trade, passing as a subscription agent for The Florists' Exchange, which he offers in combination with The American Florist and The Florists' Review for one dollar a year. He was last heard from in the vicinity of Hackensack, N. J.

The fellow is described as being about 5 feet 9 inches tall, sandy complexion, clean shaven long face, one of his front teeth partly gold-filled conspicuous when he laughs or speaks; he is fairly well put on, and wears tan shoes, with half gaiters, a black Derby hat, and long tight-fitting overcoat. He generally puts up at a good hotel.

This man is a swindler, and any of our readers whom he approaches will confer a favor by having him arrested and at once notifying us thereof.

Easter Card Literature.

One of the choicest pieces of Easter card literature to reach us this year is that appearing on the announcement of Edward Seery, florist, Paterson, N. J., on cards selected from the advertised collection of the A. T. De La Mare Printing and Publishing Company, New York, which reads as under:

IN TOUCH WITH THE BEAUTIFUL.

"When God planned the universe, He built a vast flower garden.

"Each star shines with a beauty all its own. One is a ruby, another an amethyst. There is an opal! Off in the distance is an emerald and, beyond, a sapphire. When the Great Horticulturist drove His plowshare through the field of azure, He sowed the furrows with stars, which are like vast bonquets in the hand of the Infinite. Up there, we shall see as God sees, with no diminution in 1890 as to distance Orion of the Pleiades, with broad landscapes of marvelous loveliness. The distant Milky Way, which lies like a snow-drift far away, will roll up before us into limitless fields of beauty. The Southern Cross will be a great star and very star an immortal. Vast abysses of gray, dotted with the mingled effulgence which comes from myriads of suns, will lie over all that make up our world. It will be beauty, beauty everywhere.

"Such being our inheritance up there, would it not be a good thing to get in touch with the beautiful down here?"

"Don't you know, that you can gather tints from these suns and stars, and from the rainbow, and weave them into garlands of beauty down here, and brighten up this old squalid world of ours so it will be a prophecy of what lies before?"

The Proposed Pure Seed Act.

Of all the various regulating legislation that has been proposed and enacted by the Federal as well as our individual State Governments during the past few years, the present so-called Mann bill for the prevention of the sale of adulterated and misbranded seeds and bulbs caps the climax for absolute absurdity. The theory of the honorable gentleman who framed the proposed legislation is ideal, but it certainly is a doctrine that will be found to terminate in speculation without a view to practice; simply and solely for the reason that there is no such thing in nature as seeds that are 98 per cent. pure. We do not believe that any commercial seedsman can be found in the world to-day who will risk his reputation by agreeing to supply seeds of any flower, fruit, or vegetable, and guarantee such seeds to be 98 per cent. pure. Mr. Mann in his proposed bill states the matter the other way, saying, "if any seed contain weed seed, rendering it unfit for seeding purposes;" and under the provisions of his act, two per cent. of any matter not of what any seed purports to be, condemns it. Now reverse this requirement, and the seedsman must furnish his customers with seeds that have a purity of 98 per cent. or higher even.

William F. Kasting,
Vice-Pres.-Elect American Rose Society.

From the foregoing it will at once be seen that Mr. Mann considers that two per cent. of foreign matter in any seed sample reduces its quality "materially." We will leave it for seedsmen to determine whether two per cent. of Canada bluegrass seed in a sample of Kentucky bluegrass seed, or two per cent. of medium red clover in a sample of Mammoth red clover should impose upon the seedsman selling such "materially" impure seeds a fine not exceeding three hundred dollars, or an imprisonment not exceeding one year, or both, at the discretion of the court. One cannot help wondering how or where Mr. Mann first became imbued with the fixed idea he seems to hold, that agricultural and horticultural products can so easily be kept in a state 98 per cent. pure. We cannot conceive how any man of intellectual attainments could for a moment even seriously consider such an impossible hypothesis. Did any seedsman while examining seed crops ever meet with a case where he could truly say the purity of the crop stood at 98 per cent.? Mr. Mann is trying to force an impossible standard of seed purity upon the American seedsman. The time may in some future generation come when this splendid standard of purity can be attained, but in the year 1908 we are miles away from such an ideal goal.

Again quoting from the proposed act, "If any seed or bulbs contain, respectively, dead seed or dead bulbs, or any other matter materially reducing the value for seeding or planting purposes, etc." Now bear in mind that all such dead seeds and foreign matter must be contained inside of two per cent., for at all times seeds must be 98 per cent. pure.

Again take the important question of seed germination (as entirely apart from purity of type) and you will note that this question of germination has not been mentioned in the proposed act, except in so far that dead seeds must not exceed two seeds in each hundred. Wishing at this time to be very brief, we will not now go further into the seed germination question; but one cannot but be still further convinced of the absolute absurdity of Mr. Mann's proposed legislation when it is considered that the allowance he makes for non-germinating seeds, as well as divergence from the absolute true type, is only two per cent. altogether. Neither Mr. Mann, nor anybody else, can force seedsmen to sell goods that will average 98 per cent. pure and perfect—simply and solely because such seeds do not exist; there is no such thing in nature.

During the last decade a large amount of legislation has been proposed, to be enforced by not only the Federal Government, but also by almost every State in the Union as well—and all such measures would seem to carry with them the underlying idea that the average seedsman is a very dishonest person, who makes it his life work to sell all the poor seed he can. How little such unthinking opinion realizes what has been accomplished for good by the seedsmen in perfecting all agricultural and horticultural products! No one will welcome legislation that will improve the quality of seeds more earnestly and truly than the seedsmen, but a statute as the proposed act we are now discussing is such a self-evident misunderstanding of the whole situation, that it is fore-doomed to ignominious failure from the very start. The honorable Mr. Mann's "Proposed Pure Seed Act" is an absurd proposition on its face.

We understand that this bill, designated "The Proposed Pure Seed Act," has been referred to the Committee on Interstate and Foreign Commerce, and ordered to be printed. In this connection we will say it does certainly seem very strange that while the Department of Agriculture was given a hearing in this matter before the Interstate and Foreign Commerce, no hearing whatever was granted to our commercial seedsmen, who are so very vitally concerned.

BOOKS RECEIVED.

THE OPEN AIR, THE LIFE OF THE FIELDS, and NATURE NEAR LONDON, by Richard Jefferies. Publishers, Thomas Crowell & Company, New York. Price, 75c. each. Cloth.

These are three delightful little volumes, well printed and made, written by one of the most charming of English authors, Richard Jefferies. The books contain the cream of his essays, most of which deal with Nature in some of its many phases, and show the author's great love for beast, bird and flower; his keen observation and great appreciation of outdoor life generally. His style is simple, and attractive from its very simplicity. The Nature lover will find in these essays much to instruct and entertain him; there is not a dull line in any one of them.

The work of Jefferies is not unknown to American readers, particularly those of tastes kindred to his own. The late lamented George H. Ellwanger includes Richard Jefferies in his valuable little volume "The Idyllists of the Country Side," in which he devotes a delightful chapter to the subject of "Afield with Jefferies." Mr. Ellwanger so fittingly and beautifully describes his English co-worker that we may be pardoned if at this time we give a selection from his book to which we have referred. He says: "Jefferies was an essayist and, above all, the idyllist and painter of country life as it exists in England. To recall his name is to recall the myriad beauties of Nature in all her tenses of the seasons, in a thousand conditions of light and sky and atmosphere; in countless phases of growth and blossoming. To know him is to approach nearer the heart of the flower, the mystic concave of the sky and the elusive verge of the horizon * * * Jefferies' special place in literature and his rank as a sympathizing interpreter of Nature, it is safe to assume, could never have fallen to any other than himself. There can be no second 'Life of the Fields.' Other idylls may instruct and please, but in a different degree. A finer literarian may arise to hymn the pæan of the open air, but the combinative qualities that speak from Jefferies' later work must remain to him alone."

The volumes, as we have said, are attractive in make-up, of handy size for the pocket, and will be found of greatest interest to those who delight in good reading and in unsurpassed pen portraits of the ever fascinating and beautiful landscapes of Old England.

Societies devoted to special flowers seem to be the order of the day. The latest propositions in this connection are an orchid society and a gladiolus society. Soon we may hear of a sweet pea society and an organization to take care of hardy herbaceous plants. Why not?

Obituary

Samuel Gass.

Samuel Gass, one of the prominent men of the North Side, Pittsburg, Pa., died last week of pneumonia and bronchitis. He had been ailing for some time. Mr. Gass was born on the North Side sixty-four years ago and was a florist most of his life, having a stand for many years in the Pittsburg markets. He is survived by his widow and one daughter. Some years ago, he was a member of the local florists' club and of the Society of American Florists. The funeral was attended by many of his friends, and the floral tokens, among which were some very elaborate pieces, were numerous.

E. C. R.

William Scobie.

William Scobie, aged 83 years, a pioneer seedsman of Western Pennsylvania, is dead. Mr. Scobie had gone in November to Ormond, Fla., where he owned a magnificent winter home. His death was sudden, although he had been in poor health for the past several weeks.

Born in Perth, Scotland, September 20, 1825, he went to Pittsburg by the way of Canada in 1860 and located on the North Side. For several years he was associated with Jeremiah Knox in the seed business on Fifth avenue. Later the firm moved to Liberty avenue, and there Mr. Scobie organized the firm of Scobie, Reed & Smith, dealers in farming implements, garden tools, seeds, etc. In 1880 Mr. Scobie retired from the concern, organized the firm of Scobie & Parker, with which company he had been connected ever since, at the time of his death being senior partner and vice-president. He was an old member of the Fourth Avenue Baptist Church, and for some years held the office of deacon in the church. Two sons and one daughter survive him.

Simeon Swindells.

Simeon Swindells, well identified with the florist business and known and admired by all local florists and many others in various sections of the country, died of consumption at his home, 24 Chicago street, Anacostia, D. C., on March 19, after a prolonged illness. Mr. Swindells was one of the pioneer florists of the District of Columbia. In the later seventies and early eighties he was a grower and retailer doing business in the old Columbia Greenhouses on S street in Georgetown, and disposing of stock in the Center Market. In addition to his thorough knowledge of growing he was quite proficient as a botanist, and did much toward the advancement of knowledge along these lines. On account of bad health the greenhouses changed hands about 1887 and Mr. Swindells opened another stand in the market, selling horse-radish, pickles, etc.; later he was assisted by his sons in this business and at the time of his demise a handsome business stands as their reward. Mr. Swindells was in his 59th year, and is survived by his widow, two sons, and married daughter.

J. L. C.

E. D. Darlington.

As briefly mentioned last week, E. Dillwyn Darlington, Doylestown, Pa., died on Thursday morning, March 26, 1908, of pneumonia. His death was a great shock and surprise to his many friends because of the brief time he was ill and the fact that it was not generally known that he was in such a serious condition.

Mr. Darlington was the oldest son of the late Henry T. and Susan Darlington, and was born in Doylestown, Pa., November 20, 1858. His youth was spent in Doylestown, and his early education was gotten in the Doylestown Seminary from which he graduated. Afterward he spent a short time at Swarthmore College. He then entered the office of The Intelligencer, but, because of failing health, was obliged to leave the newspaper business. He then went to West Chester and learned the nursery and florist business with Hoopes Brothers & Thomas, leaving there in 1877 to conduct greenhouses in Doylestown, furnishing plants for Samuel Wilson, a seed grower of Mechanicsville. Shortly after that he became connected with the firm of W. Atlee Burpee & Company, with which he was associated until the time of his death. After the Fordhook Farm, in Doylestown township, was started by Burpee & Company, in the Spring of 1888, Mr. Darlington became manager until his health gave out, when he was succeeded by Howard M. Earl, and became confidential adviser of the firm, taking charge of the trial grounds during the Summer. During the busy season in the Winter he was engaged in the offices in Philadelphia.

Of late years Mr. Darlington had been engaged in considerable literary work, writing many authoritative articles on matters concerning his work. He was an expert amateur photographer and had many handsome views.

Mr. Darlington was married in 1888 to Miss Catharine S. Darlington of Concordville, daughter of Dr. and Mrs. Hillborn Darlington, of that place, who survives him with three children.

The Late E. D. Darlington.

William Griffin.

William Griffin died at his home at Lakewood, N. J., on Thursday, March 26, 1908, of a complication of diseases, after a short illness. He was born in Kent, England, fifty-nine years ago, and commenced his career as a surveyor and landscape gardener. After attaining his majority he came to America, continued in his chosen profession, and had charge of the improvements of many prominent places. Subsequently he was appointed superintendent of the W. D. Sloane Estate at Lenox, Mass., where Mr. Griffin remained for fifteen years, until failing health necessitated the release from his responsible duties. He then became associated with Alex. McConnell of New York in the landscape department, and had charge of the improvements of the Black Estate, White Plains, N. Y.; also the improvements on the grounds of the Flower Memorial Library at Watertown, N. Y. For the last two years he was superintendent of Georgian-court, the winter home of George J. Gould, Esq., at Lakewood, N. J.

Mr. Griffin was a man of ability in his profession, practical in all branches of horticulture, as well as arboriculture. His kindly disposition and genial personality won him many friends, who will sincerely mourn his demise. He was a member of Evening Star Lodge of Masons of Lee and Berkshire commandery, Knights Templar, of Pittsfield. He is survived by a widow, three daughters and a son.

The Late William Griffin.

OUR READERS' VIEWS

The Formosa Lily.

Editor Florists' Exchange

Among the recent introductions of the past season is the Formosa Lily, sent out by the York and Nursery Company. In order to get a varied experience as possible with the limited number of bulbs on hand, a plan was devised whereby a box of the lily was sent to a prominent florist in each of the larger towns and cities in several States. The box sent to Rochester, N. Y., was received by the undersigned, and as grown by them the lily has proven every claim made for it. It is perfectly free from disease, and an improvement on every kind now on the market here. Visiting local florists who have seen it have already placed orders for the coming season, and more satisfactory results are hoped for than we have had this year with the older varieties. In manner of growth it is much like other lilies, but comes into bloom earlier without any apparent effort in forcing. The foliage is of good color, with flowers full and free; in height the plant reaches from 2½ to 4 feet, this varying no doubt with the style of house in which it is grown. The flowers are pure white, larger than those of Harrisii, and when fully open present a beautiful sight, as some of the plants have nine well-developed buds and flowers, while only 14 of the bulbs gave one flower each. This is a remarkable percentage, more so as the plants will average five strong flowers each, through the whole batch. It is an excellent keeper; some, by way of experiment, have been held in a cool house for a month and are still there in good shape.

As far as our experience is concerned we have no hesitation in saying we expect a great deal from this lily, and hope it will keep clean and hold its own for many years to come.

SALTER BROS.

Rochester, N. Y.

The Dahlia Classification.

Editor Florists' Exchange:

That an official classification of dahlias is needed at this time is a fact known to all who are interested in that flower; and especially to those who take part in competitions at our exhibitions. And that the New England Dahlia Society has taken hold of the matter appears to me a step in the right direction. It does seem, however, that it would have been well for the executive committee of that organization to have submitted the proposed classification appearing in the March Dahlia News to dahlia growers, through the horticultural press so that an opportunity would have been given them to present their views on the questions arising; then after a free discussion the classification adopted by the society might be expected to govern at least in New England, and that without question.

The question as has been announced in the Dahlia News, has been settled; and I being a member of the society can, I presume, make no comment on said action without being ruled out of order. However, I wish that under the head of "Double Dahlias" and, in fact, the other classes, no place had been found for fancies; and that instead of a "color line" understood by but few I should have determined classes according to form.

Under the head of Double Dahlias, No. 3, Cactus Dahlias, the rules read "distinguished by long relatively narrow florets rolled back." This is misleading, for as a matter of fact the florets do not roll backward, but generally turn in toward the center, the back roll being only on the margins of the florets.

It is not made clear just what we may expect in the way of subdivision, but in the new class, that for semi-plenas, doubtless all the classes may have their representatives. And it may be that in the case of the sub-division of the show type a place will be found for the Grand Duke Alexis type which might be called "Giant Show."

Under singles it may be noted that no place is found for common single; but a place is given to collobette, anemone and grand-flowered. And why restrict the number of florets in this class to 8 when they may be had in 12 or 16, according to our plansure?

ALEXANDER MACLELLAN.

In its plant breeding work the New York Experiment Station at Geneva has developed some new varieties of strawberries and raspberries that seem promising. A considerable stock of plants has been grown and these are now ready to be distributed for testing by the fruit-growers of the State. The conditions governing this distribution are announced, with a history and description of each of the seven varieties, in Bulletin No. 100. No application for plants will be considered unless it not show that the bulletin has been carefully read. If you are a commercial grower in New York or New Jersey, either of these fruits you should write for a copy of the bulletin.

AMERICAN ROSE SOCIETY

ANNUAL MEETING AND EXHIBITION
AT CHICAGO, ILLINOIS

March 25, 26 and 27, 1908

BUFFALO, N. Y., CHOSEN AS NEXT MEETING PLACE.

Officers elected: President, August F. Poehlmann, Morton Grove, Ill.; Vice-President, William F. Kasting, Buffalo, N. Y.; Secretary, Benjamin Hammond, and Treasurer, Harry O. May, both re-elected.

(CONTINUATION OF REPORT.)

FRIDAY'S SESSION

The meeting on Friday opened at 11 o'clock. The first business was of a routine character, which included the auditors' report.

The Rose Journal

The question of publishing "The Rose Journal," a periodical to be issued by the society, was the first business of importance. Secretary Hammond introduced the subject with a report of the preparatory work he had done in the matter, and produced copies of a prospectus embodying a specimen of the publication, with preliminary advertisements. After some discussion the following motion was offered by F. R. Pierson, and the same was duly carried: Resolved, That a Rose Journal be issued by the society, two issues annually, the dates of the issues to be determined later, provided a sufficient sum of money can be secured by subscription to cover the cost, and that the matter be referred to the Executive Committee, with power to act.

Mr. Pierson offered a subscription of \$25, and Poehlmann Brothers Company offered a like amount.

A June Rose Show

A project, which had been entered into by the executive board with the Horticultural Society of New York to hold jointly a June rose show in New York was next discussed. President Simpson outlined the arrangements made. The show is to be held next June in Bronx Park, and it is expected that the Horticultural Society will provide \$300 to \$400 for premiums, and will endeavor to get its patrons to present cups and other premiums in addition. It is also to offer a medals. The American Rose Society is to offer a medals and certificates, but is not expected to assume any financial responsibility.

August F. Poehlmann.

Pres.-Elect American Rose Society.

The premium list had not yet been arranged, but the executive committee would take up the matter as soon as possible. It was advisable that a resolution be passed at this meeting to endorse the action taken by the executive board, and such a resolution was offered by J. A. Valentine, and duly passed unanimously as follows: Resolved: That this society expresses its appreciation of the generosity of the Horticultural Society of New York offering the American Rose Society an opportunity to participate in its June meeting, and that the action of the executive committee in agreeing to participate is hereby approved by the society, and that the secretary of this society is instructed to convey these sentiments to the Horticultural Society of New York.

J. A. Valentine then read a paper by Alex. Dickson of A. Dickson & Sons, Newtownards, Ireland, on "Hybridization," which was well received, and elicited a vote of thanks to the writer.

End of Fiscal Year

Attention being called to the fact that at a previous meeting the fiscal year of the society was changed to end June 30, but entry on the official record had evidently been omitted. The occurrence being fresh in the minds of several members it was decided to supply the omission. J. A. Valentine offered, in consequence, the following resolution: "Whereas at the meeting of this society held in New York in 1902 the by-laws were amended so as to provide that the fiscal year and the term of office of its officers should begin on July 1 instead of as provided. Therefore be it

Resolved, That this society instruct its secretary to clearly set forth that change in the by-laws. And therefore, be it also

Resolved, That this society shall hereafter conduct its business in conformity with such change. The resolution was carried unanimously.

To Incorporate

The question of the advisability of the incorporation of the society coming up, a motion was made and carried, that the secretary and president of the society look into the matter and report upon its desirability at the next meeting of the society.

The final business was the reading of a paper by Robert Craig of Philadelphia on "Forcing Roses in Pots for Easter." After passing a vote of thanks to Mr. Craig for his paper, the convention adjourned.

Other Awards.

In our telegraphic report of the prizes awarded appearing in last week's issue, some of the items were omitted, among them the following:

J. E. Ammon took second for twelve Bride, also second for Mme. Abel Chateau and second for any other disseminated variety with Alice Roosevelt.

In the class for fifty American Beauty, Poehlmann Brothers Company were second.

For the most artistically arranged vase of roses, prize of \$25 cash offered by Welch Brothers, Boston, was awarded to Robert Simpson.

The Traudly & Schenck prize of \$25 for fifty Bridesmaid was won by Bassett & Washburn, Chicago.

The John C. Moninger Company prize of \$25 for fifty Liberty was awarded to A. Farenwald, Roslyn, Pa.

For American Beauty the Florey Gardens, North Wales, Pa., received the Globe Coal Company's prize of \$25.

For one hundred Richmond the Poehlmann Brothers Company prize of \$50 was captured by George Reinberg.

Wieter Brothers were awarded the prize of \$25 for one hundred Kate Moulton; George Reinberg, Chicago, second prize of \$20 for the same variety.

The Vaughan silver cup, valued at \$25, for one hundred Mme. Abel Chateau was awarded to Poehlmann Brothers Company.

The Pulverized Manure Company's prize of \$25 for one hundred Bride was won by Bassett & Washburn. For one hundred Sunrise The Florists' Review prize of \$25 was awarded to Peter Reinberg.

The American Florist Company's prize went to Poehlmann Brothers Company for fifty American Beauty.

Bassett & Washburn were awarded the prize of \$10 offered by W. W. Barnard & Company for twenty-five Bridesmaid.

Peter Reinberg captured the prize of \$10 offered by George Keller & Son for twenty-five Richmond.

Twenty-five Uncle John, the Newbold prize of \$10 was awarded to Poehlmann Brothers Company.

Twenty-five Bride, the Dietsch Company prize of \$10 was captured by Bassett & Washburn.

The John Davis Company prize of \$25 for 100 Mrs. Marshall Field was awarded to Peter Reinberg.

For the most beautiful exhibit in the hall, decided by vote of the lady visitors to the show, Miss Hammond's prize of \$20 was won by Vaughan's Seed Store.

Special growers' prizes, to the men who did the actual growing, offered by Peter Reinberg.—First (\$25), W. H. Elliott; second (\$15), Poehlmann Brothers Company, third (\$10), A. Farenwald.

The judges commended the exhibit of Julius Roehrs Company, Kuttnerford, N. J., also the five vases displayed by George Reinberg, Chicago.

A certificate of merit was awarded to Myers & Samtman for Wyndmoor.

The sweepstake prize of the Horticultural Society of Chicago (silver medal) was captured by W. H. Elliott. The foregoing awards are taken from the official report supplied by Secretary Hammond.

Hybridization of the Rose.

Paper prepared by Alex. Dickson, Acting Director of Alex. Dickson & Sons, Limited, Royal Irish Nurseries, Newtownards, County Down, Ireland, and read before the American Rose Society at the Chicago Convention.

Introductory.

It was with considerable hesitation that I consented, at the request of your society, to write a paper upon hybridization and cross-pollination in relation to the rose. I may say at once, it is a request I have refused many times from similar organizations here and elsewhere, because I have always felt, and indeed still feel, it is a subject upon which it is extremely difficult to write a satisfactory paper. The subject is one which cannot possibly be dealt with satisfactorily in a paper such as the present, and the chief difficulty one has is selecting the lines upon which to write, or the point of view from which to discuss it. I will do my best to make the paper as interesting and instructive as I can within the limited scope at my disposal. I have given the subject my most careful consideration, and I am convinced that the best method of dealing with it in this paper is to give you in a condensed form some of the results which have accrued from the labors of my brother and myself, extending over a period of almost thirty years.

I would ask those who hear this paper read, and those who may read it for themselves, to remember that it is written by a professional rose grower, and, therefore, by one to whom the practical results, from a commercial standpoint, were of the most vital importance; and of necessity this point of view had always to be

I can render little practical help; that, when all is said and done, hybridization is a science of pure experiment, or rather chance, as I can easily show. To do this it is only necessary for me to assume that everyone—at least everyone interested in horticulture—knows that, so far as seed-bearing plants are concerned, they will reproduce their species in some shape or form, maybe with some variation, or maybe exactly similar. And it follows that, by the fertilization of different varieties of the same species, new varieties, or at least varieties with some distinctive feature, may be produced. It is a different matter, however, to reduce the chaos which results from indiscriminate cross-fertilization to something like definite order—a result far beyond my ambition, or the scope of this paper, if indeed it is at all possible. All I can do in this direction, and indeed it is very little, is to give some results of our labors in hybridization.

Some Practical Results.

We began work in 1879, and naturally our first operations were upon what were considered the finest show varieties of that day. Naturally we chose parents of the choicest colors, having beauty of form and, as far as possible, vigor of habit. The hope, of course, was that the fertilization would reproduce varieties of a different kind, with at least some of the qualities for which the parents had been selected. The results for many years were disastrous. Keen and bitter disappointment followed our experiments. We, however, persevered, always upon fixed lines, carefully recording our crosses and results, making a careful and close observation of the most important features of the offspring of the cross; and I regret to say that, in the majority of instances, there was nothing but dismal failure to record. I think I can safely say that the most certain result of

appeared to me to embody the idea which I had in our ideal, and worked steadily from there.

We had, of course, to experiment upon a very extensive scale, and my point will be readily appreciated when I say that we were only able to retain for use, either for further fertilization or for commerce, about 5 per cent. of the seedlings raised. To appreciate the labor this entails upon the hybridizer one must follow the rose from the hip until it reaches maturity.

Germination Vagaries.

In hybridization, carried out upon a systematic plan such as ours, it means that the plants with which we are working have to be specially selected, planted and grown, and the blooms fertilized. There is then the period required to ripen the hip (and in Ireland this takes considerable time, owing to the cold and dampness of our climate). Then comes the sowing of the seed, and the attention and care during the period of germination. In this respect, it is interesting to note the wide differences in the period of germination in the different cases. In some instances, the seed will germinate in two or three months, and in others I have known it to lie dormant for twelve to fifteen months. I have never been able to give any reason why this should be so, and particularly why there should be marked differences in the periods of germination in seeds taken from the same hip, yet there is very frequently a marked difference. To continue on the point I am making, it takes anywhere from three to six months, according to the vigor of the plant, to bring it to such amount of growth as will enable us to bud it for the purpose of testing outside. Then, when it is budded, of course, it takes a full year to bring the plant to maturity. Here again, one has to face uncertainties, and to be very careful about forming a judgment, as experience has proved

Newport Fairy, Exhibited by Julius Roehrs Company—A Favorite with the Art Students

Pink Roses in the Smaller Classes Staged with a Beautiful Setting

The American Rose Society's Exhibition at Chicago

borne in mind by my brother and myself in our line of experimental inquiry. And it is from this point of view that I deal with it.

The Field of Hybridization.

Hybridization is a subject of intense interest, and the practical application of the science opens up an indefinite and even inexhaustible field of inquiry, but those of us who are professionally engaged in this branch of horticulture must abandon, to some extent at least, the scientific aspect in favor of the practical. With the stern realities of life facing me, I have many times—contrary to my desire—been compelled to abandon scientific lines of inquiry, as against the production of new varieties of commercial value, a situation I regretted but could not help. After thirty years' steady and continuous work, I am inclined to the opinion that the further one pursues the subject of hybridization, the greater the field for exploration. I have often thought, while pursuing my work and watching the results, that the effect was much like that produced when climbing up a steep mountain. The further one rises, the more the plains below are opened up. I will try to explain more fully as I go on exactly what I mean, and the foregoing observations are made with a view to render less keen the disappointment which I feel will inevitably follow the reading of this paper. I am conscious that my observations will be read before, and by, men of practical experience in horticulture, and particularly in the culture or advancement of the rose, and by men keen upon the development and improvement of the rose; and I am sorry, for this reason, that I can give little practical assistance to any who are desirous of entering the field of hybridization on their own account. I may, however, render their disappointment less acute. The main reason why

our crosses in the early stages of our experiments was to convince us of the absolute uncertainty of what our results would be. This prevails even now, though in a lesser degree. Possibly this is one reason why rose hybridization is so intensely interesting. There is always and ever the element of uncertainty in it so dear to human nature. One never knows what the fertilization of any two varieties will produce, or, more correctly, how many different varieties. One seed pod containing four seeds may, and has to my knowledge, produced four seedlings absolutely distinct in every conceivable respect. Many and many a time I have seen produced from the seeds sown from one hip, half a dozen seedlings absolutely distinct in color and form, some as single as the ordinary dog rose, and some so full in substance that it was impossible to get them to open even under glass.

In the early eighties, when we began to see the results of our labors, we abandoned the original basis of our experiments, namely, the fertilization of the better varieties of hybrid remontant or perpetual, and began a series of cross-pollination between the hybrid perpetuals and teas and Austrian briars, and then using the results of this first cross in a systematic course of inbreeding. The main object which we had in view was to produce varieties of roses at once vigorous in their habit, continuous in their bloom, at the same time retaining the absolute essentials of all good roses, namely, beauty of color, perfection of form, and delicacy of perfume. It was, of course, a great ambition, and how we have succeeded we must leave the world to judge. Broadly, I would say that such success as has attended our labors is due far more to the careful selection than to any defined plan of fertilization. As a broad basis of our experiments, we took as parents such varieties as

time and again that in the early stages of culture some varieties have displayed the greatest shyness in flowering, and yet, after a few years' cultivation, have taken their places in the front rank as perfect garden roses, blooming with the greatest freedom. Each year we are compelled to make a very close selection, and to discard every seedling which does not suggest some improvement in, at least, one or two of the essential elements of the perfect rose, otherwise we would have been flooded out with varieties which would have been of no practical value to us, or indeed to the rose world at large.

The Modus Operandi.

The system we ultimately adopted was hybridization in the first instance between hybrid perpetual and teas, and then inbreeding from their offspring, upon the following lines. We made four distinct crosses. We took a seedling of our own, which gave some evidence of possessing at least some of the qualities aimed at, and, in the first instance, this seedling was crossed with the male parent; secondly, the seedling crossed with the female parent; thirdly, the male parent crossed with the seedling; fourthly, the female parent crossed with the seedling. As soon as we were able to form an opinion of the results of this interbreeding, we again made a selection of those most closely approaching our ideal, again inbreeding, but with this difference, that we only made use of a limited number of parents, but in almost every instance making a double cross. For example, if we made a seedling with, say, Marie Van Houtte as the male parent, then during that season we produced the cross making Marie Van Houtte the seedling parent, and the seedling the male parent. We also had ready lays of plants prepared in duplicate for this purpose, and we carefully and methodically recorded each ex-

periment, thus carrying on our work in a systematic manner, the system of selection, of course, always playing the most prominent part in the results. From practical experience we were able to ascertain which varieties, or rather types, gave us the best results, and we were, therefore, able to a considerable extent to lessen the waste and to reduce our methods to a system containing at least some elements of certainty.

We, of course, have made use of varieties of other raisers, where we have been struck by any special feature they contained, which was in our opinion an advance upon anything in commerce. The result of our labors has been to produce what is admittedly an absolutely distinct class, if not family, of roses known as the "Alex. Dickson type." We, of course, claim that the types of roses we have introduced have been a great advance on those previously in commerce. We aimed at producing a type having vigor of growth, freedom and continuity of bloom, the flowers full and perfectly formed, with unusually long petals, at the same time growing on bushes the foliage of which is luxuriant and handsome. How far the varieties we have sent out have done what we claim for them, you must judge.

La France as a Parent.

In our experiments and in struggling with the qualities we have indicated, we felt convinced that La France would prove one of the most useful parents we could possibly have, if we could succeed in making it produce seed. It was, of course, the opinion of most hybridizers that La France was sterile, and with this opinion we were for a long time inclined to agree, and, indeed, the best that could be said for it is that there is just the possibility that it may be fertilized. Out of many hundreds of crosses with this rose only in one single instance did we succeed in making it produce seed; but we feel that the labor we spent was amply repaid, as the ultimate result of it was the introduction of Mrs. W. J.

It is interesting to note, in relation to the La France cross, that the same inclination to sterility is apparent in the rose Augustine Guinoisseau, a sport from La France. Out of hundreds of experiments we have not succeeded in getting a single seed pod from this variety.

Rosa Indica Influence.

The only other point of practical importance which occurs to me, is the fact that in our early experiments, when we had in view the object of producing varieties which would give a greater continuity of bloom, we used in our efforts Rosa indica, and, after a considerable amount of labor, we succeeded in impressing this much valued quality on some of its offspring which are now in commerce.

Hybrid Perpetual Crosses.

In a general way we found it very difficult, and indeed impossible, to place the smallest dependence upon the presumption that hybrid perpetuals would impart to their offspring anything of their own color, and, in a general way we may say that after much experience the chief varieties which we use, and use with the best results, for the purpose of getting blends are the hybrid perpetuals, Horace Vernet, Charles Lefebvre, General Jacqueminot, and also Austrian briars, Persian Yellow and Harisoni.

From what I have said you will readily appreciate the fact that it would be wholly impossible, and indeed I think a waste of your time and mine, to give in detail the results of thirty years' hybridizing; and I have done my best to make clear the general lines upon which our work has been conducted, from which it will be readily inferred that the element of chance must always play a prominent part, and I might aptly use the well-known quotation from Pope—

"All nature is but art, unknown to thee,
All chance, direction which thou canst not see."

of the class of soils known as silt loams. The smooth or greasy feeling that is found in a soil when pressed between the thumb and finger is a consequence of the presence of silt, the finest sized particles excepting clay that go to make up a soil. The amount present may vary to a considerable degree without altering the feeling, although materially affecting the character of the soil. This variation in the relative proportions of the different sized soil particles is the basis of soil classification. Upon it also depends the permeability to air and to water, responses to changes in temperature, retention of moisture, and other physical properties of a soil. It is an important factor in determining the general adaptation of a soil, and there can be but little doubt that modifications in texture greatly affect the adaptation of a soil to varieties. There are other conditions to be taken into account, however, and we must carry our investigations on from a number of stand-points in order to arrive at a solution of this problem. In carrying out the investigation of this interesting and important soil problem it is planned to secure samples of soil from various growers with whom the cultivation of certain varieties is made a specialty, and to obtain from them the necessary information to enable us to understand the conditions under which their plants are grown. To this end a circular letter has been sent a number of growers requesting the samples and information desired. While our studies have not been carried on far enough to warrant our drawing any conclusions at the present time, yet the outlook is most encouraging and we have every reason to believe that before long we will be able to state a definite relation between some of the soils and varieties.

In this matter we must have the co-operation of the growers, and I am glad to say that we have found

Prize-Winning Varieties at Exhibition of American Rose Society, Chicago.

Grant, known to you as Belle Siebrecht, in our opinion one of the finest roses in cultivation, at least from the Britisher's standpoint. In addition to this we have always found from practical experience that the roses descended from this particular cross have always impressed their offspring with some at least of the more prominent qualities of the parents; and it was by pursuing this particular line of breeding that enabled us to produce varieties, which, from a British standpoint, are ideal exhibition flowers, and at the same time the plants are floriferous and of excellent constitution. In this group we might mention Killarney, Mrs. Edward Mawley, Bessie Brown, Liberty, Lady Moyra Beauchere, Lady Ash-town, Mrs. David McKee, Dean Hole, Countess of Derby, Betty, Mrs. G. W. Kershaw, and, last but not least, Mildred Grant and William Shean, two of the finest exhibition roses at present in cultivation in Great Britain. Mildred Grant resulted from a seedling between Niphetos and Madame Willmeroz in the first instance, crossed with a seedling of our own which is not in commerce, and the system of which this is an instance applies pretty generally to all the better classes of roses introduced by us.

A Yellow Tea Scented.

After many years of continuous experiment on various lines we have at last been able to produce what has long been sought for, namely, a yellow tea of good size and color with a very real hardness of the hybrid perpetual. I refer to the Mrs. H. A. Kirk, which is now being grown by most of our growers and you will shortly be able to judge whether it is really as good a promise we have made on its behalf. I think you will not be disappointed.

And I ask such of you as may desire to enter for yourselves upon this interesting field of experiment to go forward with confidence—

"Knowing that nature never did betray
The heart that loved her."

The Adaptation of Soils to Varieties and its Application to Indoor Cultivation.

BY GUSTAVUS E. MAYNADIER.

(Concluded from page 427.)

The Fitness of the Soil.

Just what determines the peculiar fitness of a soil for the growth of certain plants or varieties of these plants is yet to be determined.

The books on rose culture state generally that the proper soil to use is a well drained loam, many authors adding that it should have a smooth or greasy feeling. This description, while somewhat vague, is yet helpful, for it cautions us to beware of heavy clays and coarse sands and brings before us the necessity of good drainage. But the term "loam," even in its technical sense, is a very elastic one and soils may be very different in some of their most important features and still be properly classed as loams. The provision that it should have a smooth or greasy feeling somewhat restricts the original description and brings it within the limits

them ready and willing to supply the information and samples necessary to insure the success of this investigation.

Discussion.

Mr. Thorpe believed as Mr. Maynadier did in special soils for special varieties. Twenty years ago, he said, La France rose was grown at Nyack, and none grown elsewhere equaled them. At Madison, N. J., Cornelia Cook was the great rose. Then a little further down at Summit, Catherine Mermet was the leader. In these particular soils the varieties did well. Other people in other sections grew them, but they could not reach the standard attained at the places mentioned. He also gave other illustrations of successes and failures of skillful growers, all attributed to soil. He believed soil elements had not been given sufficient attention.

Mr. Farenwald instanced the sending by him, with other growers through the country, a sample of his soil to the experiment station, and the analyses in the different cases were much the same. Some years ago he had a prominent reputation for growing Liberty, and everybody who did not grow them as good said, "Oh, Farenwald has a special soil for them." But it was proved that the soil in his case was not different. He had wondered if the water was not a factor.

Mr. Maynadier thought from analyses he had made, that the water did have a remarkable influence. The bureau had been called upon to make analyses of water from a large number of locali-

The American Beauty Class

At Exhibition of American Rose Society, Chicago.

Convention Notes.

ties, especially through the West, and from the letters received, although a systematic study had not been taken up, it was judged from the effects and results described that the water supply was perhaps one of the most important factors entering into the production of any class of plants. In a few months when experiments had come to an end he might be able to say more on soil conditions for roses. In the case of carnations, he had, he believed, good evidence that there were certain varieties which responded better to one particular type of soil than another.

Mr. Valentine said that in the West, where soils are impregnated with alkalis and the salts are carried in solution, the quality of the water seemed to be a very important matter.

Mr. Farenwald believed that some soils take more water than others, and this excess of water might have considerable effect.

Mr. Elliott said he was satisfied that the United States Government was making special efforts to solve some of the trade's problems, and believed if the society would co-operate intelligently in the work some important information might result.

Mr. Maynardier said that the members of the society could rest assured that the Bureau of Soils was at their service and would at all times be anxious and ready to furnish any information in its power.

At this point George Asmus announced that W. F. Kasting was on his way to the hall to invite the society to meet in Buffalo, and Mr. Kasting appearing he made an address in which on behalf of the Buffalo Florists' Club he cordially invited the society to that city in 1909. The invitation was, on motion of Mr. Valentine, unanimously accepted.

Election of officers was next proceeded to, with results as reported.

The convention adjourned, to meet on Friday, at the call of the chair.

There were not so many carnation exhibits in the show as might have been expected. J. A. Bulloug staged a fine general exhibit including Aristocrat, Victory, Winsor, White Perfection, Boston Market and Cardinal, which gained special mention in the judges' report. A vase of the new scarlet carnation Orland P. Bassett staged by Bassett & Washburn, and a vase of Afterglow staged by the E. G. Hill Company, also received special mention.

W. A. Manda, So. Orange, N. J., exhibited some cut flowers of the Cherokee rose, a vase of pink seedling carnations, and four plants of his "green rose," the exhibit gaining special mention.

Jensen & Dekema staged a fine vase of Deliance carnation on Thursday afternoon, too late for presentation to the judges.

A fine collection of plants sent by the George Wittbold Company was a pleasing addition to the show on Thursday. The collection included dracaenas, palms, pandanus, and standard boxwood trees.

Disappointment was voiced everywhere over the non-appearance of displays of outdoor roses. The only exhibit approaching the condition was that made by Vaughan's Seed Store in the class calling for a general display of roses in pots or tubs, bush plants and climbers, covering not less than 150 square feet, the prize for which was a silver cup, value \$100. The varieties included in the collection were La Flamma, Lady Gay, standard and half standard Baby Rambler, Hiawatha, Debutante, Sweetheart, Tausendschön, Farouhar, Dorothy Perkins, Schneewittchen, Baby Dorothy, Crimson Rambler, Frau Karl Druschki, Killarney, Clio, Gen. Jacqueminot, Amy Müller, Mrs. R. G. Sharnan, Crawford, Caroline Testout, Glory Lyonnaise, Paul Neyron, Clothilde Souper, American Beauty, Mme. Gabriel Luizet, John Hopper, Hugh Jackson, Philadelphia Rambler, White Baby Rambler, and Dunsmore.

In the class for the most varied collection of cut roses the exhibit made by the E. G. Hill Company was exceedingly fine, and unusually interesting to the visitors. There were 25 varieties in the collection, as follows: Mme. Simon Beaumerz, Mrs. Myles Kennedy, Countess of Derby, Mrs. E. G. Hill, Peggy, Mrs. John Bateman, Hon. Ira Bingham, Princess, Catherine Mermel, Marie de Quayas, La Gallesiere, Pharisier, Mme. Maurice de Laze, Mme. Philip Rivoire, Lady Fair, Rambler, Phyllis, Dorothy, Rhea Reid, Reine Karola de Saxe, Mrs. David McKee, Franz Deegen, Alice Roosevelt, Princess, Seedling No. 83, and Countess of Gosford.

The Julius Roehrs Company, Rutherford, N. J., staged a beautiful exhibit of the new rose Newport Fairy. There certainly was nothing prettier in the exhibition.

In the class for the best display of cut roses, all varieties, the Dorrance challenge prize was won by the Pochmann Brothers Company, with vases of Bride, Uncle John, Richmond, American Beauty, Prudesmaid, Killarney, Mme. Abel Chateauy, Mrs. Potter Palmer and Perle des Jardins.

The vase of 25 blooms of Safrano shown by Wm. H. Elliott was one of the attractions of the exhibition. The blooms opened to a diameter of 6 inches and more on stems over 40 inches long.

The prize donated by Miss Marion I. Hammond, Pishkill-on-Hudson, N. Y., for the most beautiful exhibit in the hall, was awarded by a special vote of the lady visitors to the show to Vaughan's Seed Store for the excellent display of roses in pots and tubs. The second, third, fourth and fifth in the ladies' favor were respectively Robert Simpson's vase of 25 Mme. Abel Chateauy, Farenwald's vase of 25 Richmond, Bassett & Washburn's vase of American Beauty, and Pochmann Brothers' vase of 100 Killarney.

100 American Beauty, Bassett & Washburn.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

Albany, N. Y.

EYRES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Boston, Mass.

WAX BROS., 143 Tremont St. Orders for New England States receive our careful attention. We are located in the theatre and shopping district. Telegraph and mail orders solicited. Satisfaction Guaranteed. Established twenty years.

Brooklyn, N. Y.

ROBERT G. WILSON, Fulton Street and Greene Avenue. Deliveries anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders well cared for from all parts of the country, and delivered at Theatre, Hotel, Steamer or Residence. Telephones: Prospect 2840 and 4065.

Chicago, Ill.

HAUSWIRTH, The Auditorium Florist, 232 Michigan Avenue. The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

Dayton, O.

W. G. MATTHEWS, FLOREST, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Denver, Colo.

THE PARK FLOREAL CO., 1706 Broadway, J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Indianapolis, Ind.

BERTERMANN BROS. CO. Our facilities for executing orders in an efficient manner are unexcelled. Our shipping territory includes the surrounding states. High grade flowers; expert workmanship.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of reasonable varieties of flowers always on hand. Wire me your orders.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of reasonable flowers always in stock; delivery facilities perfect.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 6297 Plaza.

Retailers desiring a share of out-of-town trade should be represented by a card in this column.

The Rose from a Retail Standpoint.

Synopsis of a Paper Read by John F. Sullivan, Detroit, Mich., before the Chicago Convention of the American Rose Society.

In opening his paper Mr. Sullivan paid a high tribute to the pioneer rosarians of America, many of whom have passed away, but whose work is perpetuated, and "their monuments seen in the present magnitude of the rose industry." He spoke of the rose as being invaluable to the retailers; who "realize that in no other stock of cut flowers can they operate with the same degree of immunity from possible loss"; and also had a good word to say for its shipping and lasting qualities. Continuing, Mr. Sullivan said:

"In depicting the part the rose plays in elaborate decorations, we may say the world cheerfully concedes the tribute this flower alone deserves above all others, it being the very essence of decorative effect in whatever manner it is shown—the individual flower, the vase of blooms, the bank of roses, or baskets of the same; and it is doubtful, indeed, if there can be found in any part of the country a retailer whose establishment lays claim to being first-class in its appointments, who does not give roses pre-eminence of importance in his store as a result of the recognition of their value fundamentally, in decorative effects.

"And of what grandeur of elaborate decorations is the rose not capable? With its gorgeous rich colors in many hues, the most exacting detail of elaborate effect is feasible. It yields itself gracefully to any situation, and in no place—either parlor, church, or hall—will the rose fail to produce the acme of elaborate decorative effect. Any one of the many varieties, without the accompaniment of other flowers or floral accessories, is equal to any occasion when the perfection of floral beauty and magnificent splendor is desired.

Retailers at Exhibition.

"Retailers view with pleasurable gratitude the powerful agency of the flower shows in the development of the rose, and the maintenance of its popularity. In the early days of the rise and progress of this flower, industrially speaking, the retailers were more conspicuous for their zeal in using these shows as mediums to strengthen their individual work in behalf of the rose than they are at the present day, and the retailers are forced to admit the increasingly active participation in these events by the enterprising rose growers and gratefully acknowledge the great good they are doing of a most permanent character.

Growers' Indifference to Novelties.

"At the same time, the retailers deplore the seeming indifference of many growers in the important matter of providing them with more of the novelties in roses, the necessity for which is most apparent. So pronounced and general is this interest, and indeed so eager are the rose patrons to satisfy their delights in new varieties, that I venture to say, were some of the once favorite roses now relegated almost to oblivion, which the so-called up-to-date grower of these times would disdain to grow, resurrected, they would find a ready market and many warm appreciative friends among rose enthusiasts. As an example I might cite the case of Bon Silene, which is now grown in some quarters and is meeting an encouraging demand. And in considering the adaptation of varieties to meet this changing taste of the people, it is well to remember that it is not the size alone that constitutes the chief element in a beautiful and most acceptable rose, as is clearly and constantly shown by even the most fastidious patrons of the retail stores while making their selection. The public is craving for novelty—something different from the monotonous few varieties that greet them on their recurring visits to the florist's store. Any of the older varieties are sufficiently attractive to the casual buyer, but the steady patrons, who are our most valuable ones, must be shown something new to hold their continued and increasing interest in our chief commodity. As an evidence of this tendency on the part of a large portion of the flower lovers for variety and novelties, witness the increasing interest shown by them the last two or three years in the dainty pompon and anemone chrysanthemums, often by identical the same persons who formerly sought the largest specimens of that flower at the time obtainable. Take the now commonly grown Crimson Rambler rose; how frequently it is used in most important social functions for its decorative effect in preference to the concededly more beautiful varieties, simply because, for the time being, this rose carries with it the element of novelty. How eagerly would the rose enthusiasts today seek the beautiful hybrid roses, as they were formerly grown, if now available.

"These are the elements of the changing character of our retail business which serve to sustain our conviction that if we would broaden the scope of the rose and still further popularize it we must create greater diversity in the productions we offer.

"If rose growers who are devoted to the production of cut blooms alone believe, as they evidently do, that a list of a half-dozen varieties of the same, embracing

Window Display of W. J. Palmer & Son, Buffalo, N. Y., During Automobile Show Week

The machine in the picture was made of Carnations and Galax Leaves, the frame being made by the firm's wireworker

merely the primary colors, will, even if ever so well grown and beautiful, satisfy the exacting taste and aesthetic inclination of the flower-loving public, I would ask how can they reconcile such a theory with the most palpable contradiction of it, when we consider the marvelous expansion of the rose plant industry as shown by the firms issuing catalogues? Many of these will tell you that they enjoy the continuous patronage of their old customers chiefly by the latter's intense interest in the newer varieties of roses as they are annually offered.

A Fair Test Imperative.

"But the experimenting must be the burden, if we may so call it, of the growers. They must take the initiative steps. The retailers, zealous as they are, cannot offer to the public a variety having only an imaginary existence or merely prospective value. To the timid but perhaps well-meaning grower I would say: try out the new varieties giving promise of a good future; give them a fair and honest test without prejudice; not as we too frequently see growers half-heartedly assigning the most unfavorable spot in their greenhouse to a few dozen plants of a novelty and thereafter being daily disturbed with suspicions that the stranger among their pet varieties is only another fake, and after a brief experience, seem only too willing to denounce it to other florists and exultantly proclaim that they themselves knew it was no good when they bought it.

"As an illustration of the respective attitudes of the retailers and many growers I will cite the case of the Killarney rose, a variety the superior merits of which are now universally conceded. Witness its struggle for the recognition deserved. Soon after the Killarney's introduction in this country, about nine years ago, a few growers experimented with it in a limited way. The keen, well-trained eyes of the retailers, who by chance came into possession of the cut blooms, recognized instinctively their rare beauty and prospective value, and true to the enterprising methods that had already gained for them a big rose trade, soon acquainted their customers with the distinctive finished beauty of the novelty, the supply of which is as yet limited. The increasing popularity of this variety and the consequent demand for it kept much in advance of the supply, which, fortunately, was augmented rapidly in the hands of but a few growers. Retailers everywhere urged more growers to plant it. The latter, nevertheless, were distrustful, and persistently refused to give it a fair trial, and in this case, as in many others, totally ignored the advice of the man behind the counter. One grower would say that it was too short-stemmed; another called it a cropper, and another thought it a shy bloomer. A few wise ones thought that we had too many pink varieties, but in the meantime a few real wise ones—growers and retailers alike—were doing a big business in Killarney roses and incidentally advancing the popularity of the queen of flowers and aiding floriculture generally.

"The growers' indifference to the constant pleadings of the retailers to awaken to the importance of cultivating varieties that would be particularly available in the warm Summer season, has delayed inexcusably the full development of the lucrative trade for both grower and dealer that is obtainable during this period. The present growers cannot justify their lethargy in the past in this respect by the absence in commerce, as they allege, of such varieties as will by their productiveness, color and quality commend them for the purpose named.

"The retailers often wonder, when contemplating the indisputably proud and exclusive position that the rose holds in the hearts and minds of the people, what would be the extent of the commercial importance and increased popularity of the queen of flowers were it not for its present prohibitory price to the masses, which operates to its disadvantage, commercially speaking. With that barrier removed, appear to them visions of acres of glass being annually added to the existing large area now devoted to rose culture, and the additions of thousands of florists engaged in this healthful and profitable industry; and in view of the vast strides made by hybridizers in recent years, may we not reasonably expect that a type of roses can yet be brought out which in addition to the quality of the flowers will be sufficiently productive to allow them to be sold at a price that will place them in the hands of the masses, and their popularity thus be extended to the full gratification of every lover of the rose? And this blessing may by the same process be extended to the multitudes of homes where outdoor culture of the rose is possible, were the suitable varieties available.

"How frequently, on our premises, the prospective buyer, who is viewing with delight a splendid blooming plant of, we shall say, Frau Karl Druschki, asks if it is hardy. We proudly answer in the affirmative and prepare to take an order. When again questioned, Will it bloom again this season? we reluctantly answer in the negative, as we see our prospective sale fade away. There is where we are deficient. We have not yet adjusted our productions to the actual requirements of the people we attempt to serve. We cannot expect amateur rose growers and the general public to purchase and be satisfied with varieties that, even in the hands of skilled florists, will not succeed under similar conditions. And considering the retailers' part in the future, no one can

question the wisdom of carrying forward with still greater vigilance and enthusiasm the splendid work on the identical lines of those pioneer retailers referred to, whose careers were so strongly characterized by eminently successful results.

"In continuing the practice of these methods let us not deceive ourselves as to their sufficiency unsupported in these times. For to maintain the same state of advancement we must enlist some of the means made necessary by the progressive spirit of the day. The exploitation of our wares being essentially a commodity of luxury, calls for our very best efforts to impress the public with their beauty, and the multiplicity of their uses. We must show our finest and encourage the admiration and consequent use of them. We must advertise; the day is upon us to employ printers' ink; our stores and stock must be made familiar to the people; we must acquaint the daily press with the current news concerning the rose, its development, its beauty and increasing popularity. And, indeed, it is a sad commentary we are forced to admit, that of all the matter recently appearing in the daily press and monthly periodicals, columns, yes, pages of it, relating to the rose, either culturally or descriptively, and eulogistic of it as the queen of flowers, very little, if any, of it emanates from the great army of florists whose interests are so materially

ing shade of unattractive color. We shall mention of 'bullheads' that in a measure serve to distinguish the whole rose family.

"Personally, I should prefer to see half of the glass at present devoted to American Beauty given to a few of our leading sorts and a further extension of our present list of forcing varieties, to include those particularly reliable for Summer blooming, and in this position I fully realize that I am in danger of standing almost alone. But it is a well known fact that no longer are retailers embarrassed when they are unable to answer the call of the critical rose customer for American Beauty if they are prepared to offer as a substitute either that marvelously distinct and strikingly beautiful rose, Richmond, or its worthy and popular companion Killarney; and, indeed, these varieties are now often preferred to American Beauty, irrespective of the cost. Even from classic Boston comes the statement in a trade report as recent as last week, that 'the demand for Beauties is not active, many people now preferring Richmond and Killarney.'

"When we reflect upon the dismal failures attending the attempts of some growers in cultivating American Beauty we are moved to pity, and regret that the same glass and efforts were not devoted to other varieties which would be most certain to yield better, if not entirely satisfactory, results.

"In conclusion, allow me to say to those who are engaged in various ways in advancing the interests of the rose, and who at times feel the encroachment of its reputed rival the carnation supported by its aggressive society, to remember that we too have a society devoted to the queen of flowers; and being faithful in our efforts in its ranks, working along the lines of its noble aims, and prompted by its suggestions, we shall maintain the rose in its glorious ascendancy to which its unrivaled beauty, and adaptability to all phases of decorative adornment justly entitle it, and after having accomplished so much in advancing its popularity, we shall still persevere in its behalf until we have achieved the full realization of our cherished desire and ambition—'A Rose for every Home; a Bush for every Garden.'

Discussion.

Philip Breitmeyer: I want to express my appreciation of this most interesting paper. It reminds us of a great many things. First of all we are reminded that Boston was the prime mover in growing roses for the cut flower trade; and while I am only a youngster I can go back 30 years to the time when Mr. Stewart came to Detroit to introduce Safrano and Bon Silene. Just this fact is sufficient to remind one of the progress which has been made. Mr. Sullivan speaks of Bon Silene and some of the older roses and from a retailer's point of view he hints that people nowadays want variety. When they want a bouquet for certain purposes it is up to the florist to do something for them. Bon Silene has been grown for 8 years as a beginning of a new period from where its growth was abandoned 25 years ago. Since that time we have taken it up in our houses, and just how we could get along without it is a quandary to me. We have used it in debutantes' bunches very largely. Some time ago we had an inquiry from New York for some debutantes' bunches and we sent Bon Silene. I shall never forget the calling down we got. That proved to us that the people wanted something new, and it was up to the florist to introduce something that at least looked new. Old Bon Silene has sold more flowers for us in Detroit than any other rose. I move a vote of thanks to Mr. Sullivan.

W. J. Stewart, in seconding the motion, eulogized the paper as of the highest order. Speaking of the problems presented in the paper he said that in the S. A. F. such problems as the intelligent retailer comes across are largely overlooked. It seemed to him perfectly natural that the taste of the public should figure in the question. To-day, when we have our enormous roses a disparity is presented to an extent which allows us to go back to the small roses and establish practically a new class.

Mr. Breitmeyer: At this time and in this place I presume one may express a disappointment. I was exceedingly disappointed at the absence of a good exhibition of outdoor roses. When the thought came to me last year to offer prizes for outdoor roses I imagined I should see a grand display of hybrids suitable for outdoors. It seems to me the growers should make a business of selling to the amateur gardener, and while the American Beauty, Richmond, and others are grand they are seen every day, and the public has no opportunity to see something they can plant themselves. I hope in future growers of roses for the amateur gardener will take advantage of these exhibitions to interest the public in hardy outdoor varieties.

President Simpson concurred in the remarks made by Mr. Breitmeyer, and said that only the year previous he had expressed regret that there were not at least a half dozen exhibits of plants of various

Carnation Alma Ward.

Cottage Gardens Co., Queens, N. Y.

Photo taken Feb. 24, 1908.

enhanced by such publicity, which, in other words, is real advertising without any cost to the negligent beneficiaries. And if the retailers would maintain their coveted position as the leaders in popularizing the rose in the future as in the past, they cannot ignore this powerful assisting agency so universally available.

"The identification of florists with the civic improvement societies now everywhere so popular and aggressive in their work is another means by which our business may be greatly helped.

"All this missionary work must be carried on in the future as in the past by the retailer, and even with more energy than formerly; for the grower, broadly speaking, is not known to the public or its quota of flower buyers, except those growers of Chicago and vicinity who seem to be as successful in exploiting their work, through the daily press, as they are in carrying it on under their immense areas of glass. The retailer has an established identity. He is in the eyes of the people and to them a real fountain of floricultural knowledge.

The Influence of American Beauty.

"Society has, as a result of a combination of circumstances aided by the florists themselves, forced the American Beauty to a position of prominence that seems at times to discourage the hybridizer in his endeavor to produce a successful rival to that famous variety; but, alas, as every retailer knows, that variety at times is anything but a real beauty. But having been wisely christened, its celebrated name often saves it from the condemnation it too frequently deserves. Originators need not fear for a place in this country for their meritorious productions even if they fall far short of the size of the popular American Beauty. Size alone does not always commend a rose; length and strength of stem, with nice foliage, supporting a flower beautifully distinct in color and form, will never suffer materially in comparison with larger size, coarse texture and vary-

CLASSIFIED ADVERTISEMENTS

Chicago.

The Week's News.

The A. I. Randall Company has been busy in the completion of its new supply quarters on the third floor of its building. The fittings have been put in to adapt the floor to both stock and sales-room requirements.

George Reinberg is about to erect 265 feet long, and planted to American Beauty and Killarney roses.

Charles W. McKellar has completed the installation in his store of a handsome new icebox of large size. It is of special design, part of it having plate glass front and side to allow of the display of orchids.

E. J. Fancourt of the S. S. Penock-Mechan Company, Philadelphia, is a visitor in town.

Mrs. T. E. Waters was an able assistant to Secretary Hammond in the discharge of his duties in connection with the meeting of the American Rose Society last week.

The name of Peter Reinberg is in the list of candidates for aldermanic honors endorsed by the United Societies.

The Chicago Tribune is offering \$1,000 in prizes to amateur gardeners. The awards are to be made to contestants who show the most artistic arrangements of flowers either in a garden situated on their premises, or in some vacant lot, in window boxes or porch decorations. The purpose is to arouse individual effort in making homes and home surroundings more beautiful, a work which should receive the encouragement of every florist. The city is to be divided into five great divisions for the contest, with six prizes for each division amounting to \$200, as follows: Prizes for the best garden, first, \$75; second, \$50; third, \$25. For the best window box or porch display, first, \$25; second, \$15; third, \$10. Seven years ago the Tribune conducted a similar contest, but upon a smaller scale, with the result that its influence, both upon individuals and civic life was widespread. It is stated that 10,000 new gardens were opened in Chicago during the Summer of 1901 as a result of this and other local appeals to the floricultural tendencies of residents.

The Cook County Truck Gardeners and Farmers' Association held its annual banquet at Kolze's restaurant, North Sixty-fourth avenue and West Irving park, March 28.

The automobile parade last Saturday night marked the beginning of a week's carnival planned to open the motoring season. Over 100 automobiles, all florally decorated, took part in the parade, necessitating the use of many thousands of flowers for the occasion. A White Steamer car was loaded to the rail with white carnations. From the Studebaker cars two flower girls distributed flowers to the spectators along the route.

The Rose Society Banquet.

On Thursday evening a banquet was tendered the visiting delegates to the rose show and convention by the Chicago Florists' Club, at the Union restaurant. The large dining room on the second floor was tastefully decorated with greens, and vases of roses comprised the table decorations. The guests to the number of 100 were all assembled at 8:30 and at 9 o'clock the company sat down to an excellent bill of fare. Seats were well bestowed, and there was an absence of anything betokening the formal banquet. With the passing of coffee and cigars President Leonard Kill of the Chicago Florists' Club regretfully announced that the chairman of the reception committee, Phil Foley, who was to have acted as toastmaster, had been called from his seat, owing to an intimation of a bereavement in his family. After welcoming the guests he introduced W. N. Ruld as toastmaster.

The toastmaster inaugurated himself in a neat and brief speech, concluding with a call on the president of the S. A. F. O. H. to respond to the toast of "The American Rose Society."

President Frank H. Traudly upon rising expressed his unpreparedness for response to the toast, and said (to wit) that he was perhaps prepared to say something for the S. A. F. O. However, he did the Rose Society much credit in voicing his praise of the rose exhibition, and the conclusion he had reached that everyone would take a deeper interest in the society's work, a work already appreciated from the fact that so many had traveled hundreds of miles to be present at the meeting.

The toastmaster next introduced President Simpson of the American Rose Society to respond to the toast of the S. A. F. O. H. Mr. Simpson, evidently in a quandary, while gracefully acknowledging the toast to the S. A. F. O. took refuge in the fact that Mr. Traudly was disinclined, perhaps through unfamiliarity with its affairs, to expend his oratorical powers on the Rose Society, and launched out into a laudation of the objects of the Rose Society, its aims, and ambitions. He spoke particularly of the friendly rivalry between the Chicago and Eastern growers at the exhibition and thought it augured well for the society.

The toastmaster then commented at some length upon the relations of the newer societies to the S. A. F. O. which he said posed generally as a big brother to reach out and assist them when they stumbled, and as a call upon one, whom he said had served it longer than anyone else, introduced W. J. Stewart.

Mr. Stewart expressed his pleasure at an introduction in such terms, and said it was worth living 40 years for such heraldry. Although his official connection with the S. A. F. O. was about closed he could not withhold from himself the opportunity to be present with the "bunch," and would always be a camp follower to the end of his life. Referring to the accepted motto of Chicago "I will" he coupled with it the extension of that motto in the work to be done by August Paehlmann, the newly elected president from Chicago of the Rose Society.

Next was introduced in the words of the toastmaster "a modest man, who has not an enemy in the world," Leonard Kill. Mr. Kill took the advantage presented in the introduction, and with a few words resumed his seat, amid cheers.

Philip Brotmeyer was then called upon and took the opportunity to express his pleasure at being able to be once more with his chosen fraternity. As he said, "I have tried to be with them from the smallest kind of a kid up." He could see no reason why the Rose Society should not be as large to-day as the S. A. F. O., but his labors to this end individually had not met with the success he sought. He certainly wished it all success, in fact both societies.

Toastmaster Ruld, then, after some eulogy, introduced Secretary Hammond. Mr. Hammond confined his address, which was lengthy, to his one subject, The American Rose Society, taking the opportunity to detail its history, affairs, and objects, and bespeaking the assistance in the society's work which he knew was possible from Chicago. His plea for an increased membership from the West was both forceful and persuasive.

J. C. Vaughan followed. He opened with a reference to August Paehlmann, the newly elected president of the Rose Society. He remembered, he said, about 16 years ago, hearing that gentleman speak at Milwaukee, and relate that he once lived in that city, and desiring to make a move to Chicago, he took the best road he knew, the tracks of the Chicago, Milwaukee and St. Paul, and walked to Morton Grove, where he stayed, and stayed well. Speaking of horticulture, he said one had only to look in the big store windows on State street to realize how horticulture had advanced. Each one of those enormous establishments had seen fit to use the art for the embellishment of its windows. In the leading stores also were to be seen decorations, horticultural in character. These, he said, were unmistakable signs of the advance of the horticultural and floricultural arts.

The next speaker was W. F. Kasting. After a reference to the exhibition, which in point of quality of exhibits was superior to anything heretofore seen, he made an appeal for a good attendance at the Buffalo meeting next year, promising at that time an exhibition even grander than that in Chicago.

J. A. Valentine, responding to the call of the toastmaster, spoke of the show and the distance he had traveled to see it. He remembered, he said, some years ago seeing a vase of Liberty roses which came from Philadelphia which were worth a journey of 2,000 miles to see. He believed the vase of Killarney which he saw at the present exhibition would remain just as long in his memory.

E. V. Hallow, who was introduced as one who is spending time "educating the kids to become flower buyers in the future," asked whether any could say childhood was not the proper time to do this. "Would you wait until they are 40 years old?" he asked. He then spoke

entertainingly of the Killarney rose. The Killarney rose was an improvement. He would say, the Killarney rose was the product of the Colleen Bawn, the wife of K. Harney. The Scotchman usually believed he could grow the best roses, and this was hard to dispute. When the soil necessary to grow fine rose products was noted, with the enterprise back of it, he could take off his hat to the rose grower.

F. Welch spoke humorously of his visit to Chicago, particularly his visit to the establishments of the wholesale florists. He had been very generally introduced as "a man from Massachusetts," and before he had gotten to the end of the line he discovered that nearly nine-tenths of the trade claimed to be from Massachusetts. What better impetus could the Chicago trade have had? Speaking of the assistance and entertainment given the American Rose Society he said the Chicago gentlemen had earned the everlasting gratitude of all its members and of the profession.

W. H. Elliott, the last speaker called upon, said he was simply a rose grower. Orators were the kind of men in demand that evening, so he would simply allow his exhibits at the show to speak for him. J. H. Pepper.

TRENTON, N. J. Shying at a herd of cows, an automobile belonging to Carl G. Roedling crashed into the home of Mrs. W. J. Chinnick, florist, near the Interstate Fair Grounds, Thursday night of last week, tearing its way through the front walls and almost wrecking the parlor. Mrs. Chinnick and her daughter were in an adjoining room. The older woman opened the door leading to the parlor, looked for a moment at the roaring machine and then calmly inquired, "Is anybody hurt?" No one was hurt, but the automobile was wedged fast in the wall.

LANCASTER, PA.—Albert M. Herr, the popular secretary of the American Carnation Society, is suffering from an attack of the grip.

CANNAS

Our stock is true to Name. Extra Selected, plumb, sound, 2, 3, 4-eyed roots.

Table with 3 columns: Name, Price per 100, and Price per 1000. Includes varieties like Austria, Alba, American, Black Warrior, etc.

DANLIAS, field-grown whole clumps, 40 leading kinds, caucis, decorative and show, true to name, per doz. 45c.; per 100 \$1.00, per 1000 \$30.00. All kinds mixed, per 100 \$3.00; per 1000 \$20.00.

CALADIUMS (Elephant's Ears), sound bulbs, live center shoots, the best quality. Per 100 6-8 in. circumference \$1.50, 8-10 in. circumference \$3.25, 10-12 in. circumference \$5.50.

TIBEROSIS, Dwarf Pearl, the true kind which will produce short stalks with double flowers. 1st size 50c. per 100; \$8.50 per 1000. 2nd size 50c. per 100; \$4.50 per 1000.

GLADIOLUS gand., mixed, 80c. per 100; \$7.50 per 1000. 25 at 100 rate.

All other bulbs, etc., see catalogue. Shellroad Greenhouses, Grange, Baltimore, Md.

- 500 Trumpet Creeper, 4 yrs. at \$5.00 per 100. 300 Yucca Filamentosa, 3 yrs. \$5.00 per 100. 200 Privet, 4 to 5 ft., 5 to 12 branches, at \$6.00 per 100. 300 Berberis thunbergii, 12 to 18 ins., 10 to 12 branches, \$8.00 per 100. 2000 Honey-suckle, 2 yrs., perfect plants at \$1.00 per 100. 200 Altheas, 2 1/2 to 3 ft. Bushy, \$5.00 per 100. 20 Varieties Strawberry Plants, \$2.50 per 1000. Asparagus, 1 and 2 yrs. \$2.50 to \$3.00.

RIVERVIEW NURSERIES, J. H. O'Hagan, LITTLE SILVER, N. J.

AMONG THE GROWERS

The Dreer Nurseries, Riverton, N. J.

A visit to this extensive establishment on Monday of last week found this firm already very busy with the early Spring rush. During the past two months many shipments for the Southern trade have been made; this is now winding up and consignments are being made in other directions. The packing shed is already becoming overcrowded, and this department has commenced working overtime in order to keep the orders cleaned up daily.

The usual cry heard among the trade about the scarcity of palms does not appear possible when one sees the immense stock of these plants on this place. Here is observed a good stock of Kentias Forsteriana and Belmoreana in from 5-inch pots up to 8-inch and 10-inch tubs. The latter are exceptionally fine stock. We noticed quite a number of arecas, rather more than usual; most noticeable were three houses filled with 6-inch pots. These plants are very desirable stock for growing on. This firm has certainly successfully solved the question of growing coconuts; at the present time six houses are devoted entirely to these plants. We see them in all sizes, from the seed pots up to 7-inch. Instead of sowing the seed of this palm in boxes as formerly, the firm starts the seed in small pots; in this way there is no danger of the tap root becoming broken off in re-potting and the plants go right along without a check.

good strong growth, wood well ripened, and all breaking evenly.

In another palm house is a grand lot of Phoenix Roebelenii in from 3-inch up to 7-inch pots; this is certainly a grand acquisition to the palm family and the demand is steadily increasing.

Among the stove plants there is still a strong demand for the many varieties of marantas; these are grown here very extensively, all the young plants being planted out on benches. Under this system they increase very rapidly.

Dracenas are in splendid condition just now; we noticed several fine lots of Goldieana, Massangeana, Lindenii and terminalis, mostly in 3 to 5-inch pots.

Another house is filled with choice and rare palms. There are a great many varieties here which are seldom seen in commerce, therefore this house appeals very strongly to all who are interested in forming collections of these plants.

Some 25,000 dahlia cuttings were being put in on the day of our visit, while the following day's program was 45,000 rooted cuttings potted from the bench. Three long frames are filled with young plants already potted off. So much care has been given to this department that in the past season the firm was able to report its dahlias growing in the field as being 99 per cent. true to name. The concern deserves great credit for its enormous undertaking the past two years in straightening out the nomenclature of dahlias, as these plants have previously got very much mixed up.

In the fern department, the first thing that attracted our attention was a magnificent lot of cibotium in 8-inch tubs. It is seldom one sees so many plants of this size in one establishment. We noted, as usual, large stocks of the various nephrolepis, and from present appearances the trade is gradually getting down to three varieties—the old Boston, Scottii and Whitmanii. The first named variety appears to be coming back in favor more each year. In the case of some of the varieties that have been introduced the past two years, while they are good for cutting, the plants do not stand well when put into a dwelling house. In this department we noticed a new fern, Pteris Childsii. It has a strong erect growth and when properly finished the ends of the fronds are cristated. This is undoubtedly a fine acquisition to the fern family, and is to the pteris family what Farleyense is to the adiantum family; no doubt when sufficient stock of it is procured it will be a ready seller. There is, as usual, on this place thousands of ferns of the fern dish sizes; among these we noticed a very fine lot of Pteris Wilsonii. These are all well finished plants and are becoming more in demand every year.

This firm is stronger than ever in the perennial department. We noticed frame after frame filled with these plants already in pots, ready for immediate shipment. The success of the firm in adopting the method of potting up these plants in the Fall has been wonderful, and while it has doubled the number of plants of many varieties each year, yet even now it is difficult to supply the increased demand. This is plain proof of the satisfaction the stock sent out by this firm has given.

One range of three houses is devoted entirely to anemones in 3-inch and 4-inch pots, all ready for shipping as soon as the weather opens up. Outside we observed thousands of pots of honeysuckles in all the most popular varieties, also a large variety of clematis and wistaria. These, being all grown in pots, can be planted out and immediate results obtained. Two houses are devoted to cannas; already there are thousands of these plants ready to ship, a great many of the choice and rare varieties being grown on to supply immediate demands.

Another range of houses is devoted entirely to bedding plants. Here we find all the latest introductions of both double and single geraniums, also a large stock of variegated and ivy-leaved geraniums; some six varieties of heliotropes and some of the newer ageratums, also quite a stock of the six different varieties of scented geraniums. No matter what one is looking for in this line it can be found on this place, so large and complete is the stock of everything.

Near the packing sheds we pass through the department devoted entirely to bulbs. We noticed here several men already busy picking out orders for dahlias, gladiolus and other Summer-flowering bulbous plants.

The aquatic department is growing larger each year. There is already a very large stock of young plants, both the hardy and tender water lilies, among them being the latest introductions from Europe and this country. Shipments of nelumbium roots are being made. There is also a complete assortment of all aquatic plants and grasses that go to make lily ponds complete and attractive.

DAVID RUST.

tifully arranged as was the display made by Vaughan's Seed Store. Circumstances had prevented three growers who were raising stock for this exhibition from getting it in shape—they missed maturity somehow. He trusted that outdoor roses would be made a feature of the next exhibition, as in their absence was missed one of the objects of the society's educational work.

M. Barker pointed out the fact that it was very essential for growers to know some time in advance what they were expected to grow, and the late issue of the society's final premium list undoubtedly led to confusion on the part of growers as to the requirements of the exhibition; he suggested that next year the list be issued six months ahead.

President Simpson said that it was found impossible this year to get out the list a day earlier than was done, owing mainly to local conditions.

A full report of the discussion on Wm. H. Elliott's paper on the "Proper Size of a Commercial Rose House" will appear next week.

Secretary Hammond of the American Rose Society writes us under date of March 31 as follows.

"I have never before seen so profuse an exhibition of cut roses; I doubt if it is possible to get a better. One alcove with Pochlmann Brothers Company's American Beauty roses in the center, then three vases of other sorts on each side, was a gem of elegance. W. H. Elliott sent in the cap sheaf of all. The Chicago Florists' Club gave us a good reception. T. E. Waters, secretary of the Florists' Club, did us a lot of service. We have added five life members to our roll."

House of Carnation Alma Ward.

Growers, Cottage Gardens Company, Queens, N. Y.

Photo taken Feb. 24, 1908.

TARRYTOWN (N. Y.) HORTICULTURAL SOCIETY: A well attended meeting of this society was held at Good Templars Hall on Friday evening, March 27, 1908. President Angus filled the chair and in the absence of Secretary Noulbrand William Scott acted as secretary pro tem. Two applications for active membership were received, and the executive committee presented the name of Mr. Henry Siegel for honorary membership. Letters were read from donors to our prize fund for next Fall exhibition and most of the premiums given last year will be duplicated, so the outlook is bright for our next November show. The committee in charge is busy preparing the schedule, which will be sent to all concerned in due time.

The prize for cyclamens, presented by William Scott, was awarded to James Stuart, gardener to Mrs. F. A. Constable, Manamouck, N. Y.; also a cultural certificate. Mr. Stuart brought eight plants in 6 and 7-inch pots, which were perfect in every way. The same exhibitor was also awarded a cultural certificate for a large plant of Pseudotsuga noble in full bloom. W. H. Waite, gardener, Greystone, Yonkers, N. Y., received honorable mention for a vase of schizanthus.

Mr. Tibbets, White Plains, N. Y., will, at the next meeting, give an illustrated lecture on "Aquatic Gardens." He is a very successful grower of these plants and we anticipate a plant evening. A prize is offered by Wm. J. Smith, White Plains, N. Y., for best two flowering plants.

L. A. MARTIN.

In going through the several ranges of palm houses, we noticed something new on top of the hot water boilers and was informed that this was a centrifugal pump driven by a small electric motor, and was used to increase the hot water circulation. Some difficulty has been experienced in the past in getting the hot water to circulate freely in these one-acre ranges. Now this range is the best heated one on the place, and in addition some frames at a distance of 150 feet from the range are also heated from the same boilers.

In passing along we noticed large batches of araucarias in both 5-inch and 6-inch pots. While these are imported by the thousands annually, the demand continues so strong that there is never a very large supply on hand at any one time. The bay tree houses are filled with these in all shapes and sizes; also a large supply of box plants in both pyramid and standard shapes.

The range of short span houses is at present filled with roses, there being upward of 50,000 of these, all breaking well and ready for Spring shipments. The varieties include all the best of the European and American collections. We noticed a larger percentage of hybrid tea roses than in former years, showing that the tendency is to plant these in this country. We never saw a finer lot of roses brought together than are seen on this place this year—

THE NEW LIGHT PINK CARNATION MAY

You will find in this variety one which you will want to grow in large quantity after you give it a trial. It is one of the few varieties which come in early and keep continually at it until transplanting time. The color is better than Enchantress and the bloom is better than Fair Maid and it is freer than either of them.

We are now sending out fine, strong, well-rooted cuttings. Let's have your order now. \$12.00 per 100; \$100.00 per 1000.

Also other new and standard sorts. All the best varieties at current prices. Our stock is in prime condition.

REVIEW OF THE MARKET

NEW YORK.—The cut flower business, of which we spoke encouragingly last week, has become worse than ever, and no matter what price the stock is offered at, it is simply impossible to effect a clearance. This applies to everything, but particularly to roses, carnations and the general line of bulbous stock. In our rambles through the market early in the week we noticed that both roses and carnations were in quantity, left over from the previous Saturday—something that has probably not happened before this whole season. There always has been some opportunity to move the stock out to speculators at some price or other, but this week has been an exception, and the supplies absolutely could not be cleared at any figure, thousands of carnations and roses without a doubt going to the garbage barrel. It is but two weeks to Easter, and it is to be expected from now on that plants, particularly flowering ones, will command the attention of the retail dealers. It would not seem, however, that between now and Easter there will be or can be, much change in the cut flower market conditions.

CHICAGO.—There is no improvement noticeable in the condition of the Chicago cut flower market. If anything, the tone is lower than a week ago. While there is practically no change in prices, it is evident that there must be some energetic work done to clean out midweek arrivals, which are too heavy for the requirements of the market. Roses are very plentiful, but the stock is fine, and this fact perhaps more than anything keeps rose prices on their present plane, which is low at best. Carnations are shortening up in crop, but there is no scarcity by any means. Bulbous stock still suffers from the influx of outdoor flowers, which is heavier than ever before. Quantities of Lilium rubrum are arriving, but they move fairly well. Haisies are in abundance, too much so for good clearance, and movement is made at times at figures of a bargain character. Adiantum and asparagus sell fairly well, and are good things in the market. Sweet peas continue in brisk demand. **J. H. P.**

BOSTON.—The market remains poor. Monday is generally a good day for trade, but there has been little improvement this week. There are good grades of all kinds of flowers, but the buyers are scarce. Roses have become very plentiful; in fact, it is hard to move them at any price. Carnations are equally plentiful, there is no demand for any special color or variety. Bulbous stock is abundant, selling at prices which leave little if any profit for the grower. Violets are also in large supply; so are sweet peas, but a few dull days make these latter flowers hard to handle. Lilies are plentiful as are callas. There is not such a demand for lily of the valley as there generally is; in fact, there is a dullness which as yet it seems hard to break. **J. W. D.**

INDIANAPOLIS.—The heaviest funeral orders of the year came as a most welcome relief from heavily laden florists' shops. This work was not obtained by one or two retailers, but all of them enjoyed their share and the grower fared accordingly. Decorations are few, but counter trade indicates better times for the store men. Wholesale prices on stock are lower than last year; this is occasioned by a temperature of 75 to 85 degrees. Roses are cropping and select stock is often sold at half the list price; the quality is uniformly good. Richmond, Killarney, and Kaiserin Augusta Victoria, also La France, sell best at \$2 to \$8 per hundred. Carnations are on a level with bulbous stock in price and numbers, \$1 to \$2 per hundred being the unfortunate price. Home-grown violets are scarce at 50c a hundred. Fancy sweet peas, select colors, are turned readily at 50c to 75c a hundred.

A wonderful profusion of plants is seen in all quarters, only the choicest find a profitable sale. **L. P.**

ST. LOUIS.—The past week business was not altogether satisfactory to the wholesalers and retailers. Stock was

again too plentiful in all grades, and the demand light, still there was not the usual glut. The greenhouse men and seedsmen have little to complain of at present, as they are kept very busy; in fact, they are putting on an extra force of help. Prices on stock remain about the same as the week previous, except on carnations, which were part of the week down to \$1 per 100 for the best grades. Roses, too, suffered in price a little; of these the market has an extra supply in all varieties. Long and short American Beauty are in plenty, the former at \$3 per dozen, the latter, \$2 to \$5 per 100. Other roses bring from \$2 to \$6 per 100. Tulips run from \$2 to \$3; violets, 25c to 50c per 100; sweet peas, 25c to 50c; Dutch hyacinths, \$3 per 100; callas, which are in oversupply, \$6 to \$8 per 100; Harrisii lilies, \$10 to \$12.50.

The growers say that on account of Easter coming so late most of the bulbous stock will be over, also violets. In greens the market is well supplied. **ST. PATRICK.**

PITTSBURGH.—Cut flower trade is still quiet, not much doing but funeral work. Stock is not quite so plentiful yet there is too much of it for the demand. Sweet peas are too abundant and low in price. Carnations are held a little higher; roses remain about the same. Harrisii lilies and callas are coming in strong and the prospects for Easter are good for a fine crop. König, Elina, has about 50,000 to cut in fine shape, from now to Easter and his bulbs are exceptionally good.

Blooming plants are now seen daily in the market; the warm spell of weather makes people feel like buying. The seed trade is very active; at W. C. Peckert's store on the North Side everybody is busy from morning to night. **E. C. R.**

PROVIDENCE, R. I.—The market has improved a great deal the past two weeks, with an abundance of all kinds of seasonable stock both in cut flowers and blooming plants. Funeral work has been very good and the cut flower trade shows a much better demand. Carnations are bringing from \$1.50 to \$2.50 per 100 wholesale; Bride, Bridesmaid, Killarney, Golden Gate and Liberty roses are selling for \$1 to \$10 per 100. Violets are a glut in this market and are bringing \$3 per 100. Bulbous stock is very plentiful and is sold for the best price that can be obtained. Flowering plants are numerous and are not moving very fast. **G. A. J.**

NEW YORK.—Charles Nen, a florist of 74 Bay Thirteenth street, Bath Beach, is in the King's County hospital, suffering from a fractured skull, the result of an assault by a saloon keeper on whom Nen had served a summons in a civil suit. It is said that the florist cannot recover from his injuries.

At the meeting of the Horticultural Society of New York, in the Berkeley Lyceum building, 19 and 21 West Forty-fourth street, on Wednesday, April 8, at 4 p. m., H. H. Saylor, Architectural Editor, Country Life in America, will deliver a lecture on "An Architect's Views on the Use of Plants in Tying the House to the Landscape," illustrated by lantern slides.

The plant auction sales, which commenced at the Fruit Auction Company's warehouses on Wednesday, April 1, and which are to be a daily feature during the season, are meeting with success. At Wednesday's sale there was a good attendance of buyers, and a generous consignment of stock from growers. The fruit peddlers are this year handling plants.

FRANKLIN, PA.—The Bell Floral Company, composed of John, Philip and Edward Bell, has taken over and will continue the general florist business carried on for forty years by W. T. Bell and W. T. Bell & Sons, and intend to remove the plant houses now in use in Franklin to the larger place belonging to the concern at Niles, Pa.

500,000 PANSIES

BEST MARKET STRAIN GROWN

Grown from seed of our own raising, this strain is the result of over 25 years' careful selection and for size, form and substance and wide range of color in clear, brilliant self and novel shades and markings, they will be found unsurpassed. Philadelphia.

Among Growers.

A recent trip to the establishment of Godfrey Aschmann, 1012 Ontario street, found the stock in good condition, ready for the Easter trade. There are about 3,000 pots of multiflorum lilies, well budded, and a large percentage of them of good height. There are upward of 6,000 azaleas in 6 and 7-inch pots; of these 2,000 are VanderCruyssen, 200 Niobe, the balance all good standard varieties—nice plants in just proper condition for shipping. Out in the frames were 6,000 hyacinths in 4-inch pots, 400 pots of daffodils, three bulbs to a 5-inch pot; 2,000 pots of tulips, three bulbs to a 4-inch pot, all looking well and strong. Another house is filled with Spirea Gladstone, well furnished plants, having lots of flower spikes. One house contains 1,000 hydrangeas in 6 and 7-inch pots; the side benches here are filled with moonvines of which 15,000 are sold every Spring. Of cinerarias there are 1,200 plants in 6-inch pots—a very good strain, grown well and clean. There are also some very nice lots of Begonia Erfordi, Primula obconica and daisies all in flower. All the flowering stock is in good condition and at the prices quoted good value for the money.

There were seen a good supply of kentias in from 5 to 7-inch, also a nice lot of araucarias, one batch of Aglaea in 7-inch pots being very good. Of the old Boston fern there are some nice plants in 7-inch pots, while all around, every nook and corner, is filled with geraniums and annuals for Spring trade.

Spring Exhibition.

The Spring show of the Pennsylvania Horticultural Society opened on Tuesday afternoon and while the exhibits were not quite as numerous as in some previous years the quality made up for this lack. The most noticeable varieties of tulips on exhibition were the following: Sulphur Yellow Marillo, Everdina Jacoba, yellow and orange red, Hobbenna, Lord Beaconsfield, Pink Beauty, Prince of Austria, Joost Van Vondel, best white, White Hawk, new satin white. Among the most prominent hyacinths were Rastaijenbloem, white tinted with pink center, Noble Par Merite, pink, Cardinal Wiseman, single pink, Johan, light blue; in daffodils Glory of Leiden is still by far the best. Other good varieties are Princess Ida, small trumpet almost white, C. J. Backhouse.

In spireas superba was the best seen at this exhibition. Of lilies there were some very good plants of both longicornum and Harrisii. One exhibit of four bulbs of Harrisii planted in an 8-inch pot was the best of its kind seen here for many years. Of lilies the principal varieties exhibited were Charles X., Madame Lemoine, Marie Le Graye, Souvenir de Louis Spæth.

The azaleas exhibited by Mr. C. B. Newbold, Samuel Batchelor, gardener, were really better than last year, the three largest plants measuring five feet in diameter, all such a mass of flowers

S. R. LEVY, Binghamton, N. Y.

that not a particle of foliage was visible. We had, as usual, some magnificent plants of geraniums which are always quite a feature of this show; those exhibited by Mr. James W. Paul, Jr., Joseph Hurley, gardener, were plants measuring from three and one-half to five feet in diameter.

Among the newer plants were several collections of amaryllis; these were principally Burbank's California hybrids and most of them presented some very fine markings. Other new plants exhibited were Asparagus Colemanii, Nephrolepis todeoides, and Pteris Childsii. The best plant of the latter was shown by Mr. George W. Childs Drexel, Thomas Long, gardener, and was in an 8-inch pot, the plant standing 26 inches above the pot. There were several very good exhibits of Spirea Alexandra; this is a very pretty plant, but some were not finished quite well.

The principal exhibit of foliage plants was from Mr. James W. Paul, Jr. His collection which took the first prize consisted of Kentia Belmoreana, Pandanus utilis, Alpinia Sanderae, Latania rotundifolia, Phoenix rupicola, Phoenix Robelouii and Dracaena Sanderrana. **D. R.**

Do Not Order Your Easter Advertising Matter Until You Have Examined Our Original

EASTER Announcements

SUCCESSFUL BUSINESS cannot be obtained without special endeavor. One's own personal efforts need backing and the most helpful backer is **WELL-DIRECTED ADVERTISING**, carefully selected and freely used.

For those florists who cater to the **EASTERTIDE TRADE**, we have prepared six graceful and attractive designs which we offer at a price that appeals to the user of good printing. We furnish **THESE EASTER ADVERTISING ATTRACTIONS** in the shape of small oblong four page folders, printed in the finest style and on the best heavy enamel paper, with the engraving covering the front page and the advertisement on the third page. A fine quality baronial envelope is included in the price.

Delivery is F. O. B. New York at the following prices:

- 100 Folders and 100 Envelopes..... \$3.50
- 250 Folders and 250 Envelopes..... 6.00
- 500 Folders and 500 Envelopes..... 10.00
- 1000 Folders and 1000 Envelopes..... 18.00
- Each additional 1000, at same order..... 15.00

On orders for 500 or over customer may select two or more styles without extra charge. If interested, send at once for a sample set of these Announcements. They are original designs, made expressly for the season of 1908, and will interest you. It only costs one cent to look them over.

These Announcements have won immediate favor, and we advise you to act promptly if you wish yours filled in good time. Address

We have received orders from

Rooted Cuttings: \$2.00 per 100, \$15.00 per 1000.

(55) Nuts for Name.—Kindly inform me if the enclosed seeds are beans or nuts; also name of same. They are sold here under the name of "Southern mountain nuts." H. B. M. New Jersey.

—The seeds are those of some pine, probably Pinus flexilis or the Pinon pine. J. M.

(56) Coconut Fiber.—Where can coconut fiber be purchased and at what price? Ohio. B. C. B.

—We do not know of any dealer handling coconut fiber at the present time. Perhaps some reader can supply the information desired.

(57) Wire Worms.—Can you inform us as to the worm we send herewith? We have tried lime, but without success. What will kill the insect, and what is the name of it? We have our house planted with Asparagus plumosus nanus. New Jersey. P. B.

—The insect sent for examination is the well-known wire worm, which is a great feeder on the roots of plants. Sterilizing, or freezing the soil thoroughly through the Winter time, is the only effectual remedy for this pest. The worms can be kept fairly well in check, however, by using sliced carrots as a bait, laying a piece here and there along the benches and examining it every day, destroying such worms as have been attracted.

(58) Press Schedule.—Kindly explain to a beginner just what you mean by the press schedule (column 1, page 344). Are publications upon the subjects there given offered for sale, and if so, at what price and by whom? Penn. W. G. N.

—The press schedule referred to is merely a list of the subjects that the National Council of Horticulture will have prepared and published in the daily press this year. These articles are written and sent out with a view of interesting the public at large in everything pertaining to horticulture, and are published by the leading newspapers of the country.

(59) Slugs Destroying Carnations.—We send some carnation buds which have been partly eaten by some insect; we have failed to discover what it is. Can you tell us, and also suggest a remedy? Tenn. W. & M.

—The flower buds of the carnations have been eaten by slugs. One of the best remedies for this pest is to take a lantern and go over the plants at night and pick off the slugs. Do this two or three nights in succession and give the surface of the soil a good dressing of fresh lime occasionally. In this way the slugs can be eradicated.

(60) Mushrooms.—I have the finest lot of mushrooms—big, white, like snow. My employer complains about the mushrooms getting black after cooking. Do you think it is the fault of cooking? I do not see very well how it could be my fault. Do mushrooms require to be cooked at all? They are not open when I pick them, and I gather them every morning. New Jersey. C. H.

—Mushrooms will turn black when cooked if they are old, or even if they are cooked too long. However black they may get by the cooking, we do not believe that their flavor is impaired or that they are spoiled in any way. Perhaps in this case the cook does not use them while strictly fresh, and perhaps cooks them too long. Mushrooms should always be cooked before eaten; they may be eaten raw of course, and so may a potato, but they have then little flavor.

(61) A Beginner with Carnations.—In the purchase of 1,500 carnation plants by a beginner, what varieties

should he buy, and in what proportion for a village of 7,000? Also, as I am just starting in, how am I to get the wholesale prices advertised in your paper? A. O. C.

New York.

—If it is desired to market the flowers from the carnation plants to the local trade, we would advise planting in about the following order: 100 red, using either Ileana or Victory; 400 white, using White Perfection or White Lawson; 400 light pink, using Winsor, Welcome or Enchantress; 400 dark pink, using Mrs. Thos. W. Lawson or Afterglow; 100 crimson, using Harry Fenn or Harlowarden; 100 variegated, using Mrs. M. A. Parten. If, however, it is desired to market the flowers at wholesale, shipping them either to Buffalo, New York or Boston to any of the wholesale dealers, it would be better not to plant so many varieties. In fact, with a stock of only 1,500 plants we would grow only white and pink, cutting out the red, crimson and variegated altogether. By ordering plants, or cuttings, from any dealer advertising in The Florists' Exchange, stating where you saw the advertisement and sending your business card, showing that you are in the trade, and the cash, you can obtain the goods desired at the prices advertised.

(62) Sterilizing Carnation Soil.—Could you inform me as to the best way to sterilize soil to be used in carnation benches, as I have no steam? Would it be advisable to construct a galvanized box and keep fire under same until the soil is baked? My soil is full of wire worms, and hundreds of toadstools make their appearance all through the Winter. Would the baking process take from the value of the soil? Mass. G. C. B.

—I do not think it would be practicable or desirable to construct a sterilizing plant on the basis you suggest. If you have a large commercial establishment I think you will find it to your advantage to purchase a boiler which will carry 40 to 60 pounds steam pressure with safety and arrange a regular sterilizing box of one of the types suggested by the Massachusetts Experiment Station, in Bulletin 55. The dry heat which would be produced in the system you suggest will burn the soil and injure its mechanical texture. While it will undoubtedly accomplish the destruction of the spores and insects with which you are now annoyed, it will burn out the organic matter to such an extent as to make the soil undesirable for the use to which it is wished to put it. The advantages of sterilization are, I believe, sufficient to warrant the installation of a boiler, or the hiring of a portable boiler, for the purpose of sterilizing the soil in which roses, violets and vegetable crops are grown. Carnations do not suffer as much from soil troubles as do many other greenhouse crops.

L. C. CORBETT, Horticulturist, Bureau of Plant Industry, Washington, D. C.

New Orleans.
News Notes.
At the meeting of the New Orleans Horticultural Society held on March 19, there was a good attendance of members, and a revival of interest was shown in the proposed chrysanthemum show, which it was decided to hold on November 12, 13, 14 and 15, 1908.

Ed. Baker, for several years superintendent of Audubon Park and later in business on his own account as a landscape gardener, has given up gardening to take the management of a large ice cream company.

Francois Grucoy, who has been located for several years at the corner of Garondelet and Washington streets, has recently become the owner through purchase of that corner.

James A. Newsham sailed recently for Central America on an orchid collecting trip. R. Lockerbie will have charge of his business during Mr. Newsham's absence.

Owing to our very mild Winters geraniums and other flowering plants are moving slowly. Geraniums are to be seen in the different gardens which have survived several Winters and have grown to be large bushes, and at this time are profusely covered with flowers. Another distinctive feature of New Orleans gardens are the rubber trees several years old, and very attractive bushes they make.

Justin St. Mard is receiving congratulations on the birth of a son.
CRESCENT CITY.

SIoux CITY, IA.—The Sioux City Nursery and Seed Company, competing with ten out-of-town nurserymen, received the contract for planting 1,500 trees in Fairview Park.

Cincinnati.

News Notes.
 There is no improvement in business since last report; therefore, an overstocked market. The outlook for Easter is a problem, but there will probably be enough flowers to go around.
 Mr. Schenck of Columbus, O., was in the city on March 28, looking for Easter novelties in plants, and, of course, had to go to Peterson's, as he is the only novelty grower in Cincinnati.
 Friday and Saturday (March 27 and 28) the temperature reached 80 degrees, but on Sunday a heavy storm dropped it back to 40 degrees where it remains at time of writing.
 The flower market on Saturday, the 28th, was packed with all kinds of stock, but the business done was not up to the standard by a long way.
 George & Allan, our large bulb growers, have been heavy losers so far this season, and it is certainly a shame to see such fine stock go to waste.
 E. G. G.

Boston.

News of the Week.
 Notwithstanding the dull trade prevalent not only in the flower business, but in all other industries, the prospects of the Easter plant trade are bright. Lilies will be none too plentiful, that is, good lilies; but there are many this year that are not up to the standard. Azaleas will be plentiful and good; and there will be no lack of all kinds of plants. Violets have always been great favorites at Easter in this city, but this year the date is so late and the season so mild that prominent growers of these flowers predict a scarcity.
 At W. W. Rawson & Company's trial grounds at Marblehead many varieties of Spring bulbous plants will soon be in bloom; already several species of the pretty dwarf Asiatic irises have gone by, opening their pretty blossoms with the last days of Winter.
 Zinn the Beacon street florist presented his foreman, Wm. Chase, a silver service last week in consideration of his ability and faithful attention to duties during the past ten years.
 J. A. Cartwright, salesman for the Waban Rose Conservatories, has been on the sick list for the past week, suffering from kidney trouble. P. J. Donoghue had to cut short his visit to the Chicago rose show, on account of Mr. Cartwright's illness.
 The sweet pea houses of William Sim are a glorious sight at present; there are seen many thousands of blooms in all of the finest Winter-flowering varieties.
 At the last Saturday meeting of the season of the Massachusetts Horticultural Society a conference was held on growing hardy grapes. W. C. Strong presided. An interesting paper was read by Mr. Rich that had been prepared by C. W. Libby, and Messrs. A. C. Hixon, Worcester; H. A. Cook and Jos. Chase gave interesting talks on their experience in grape growing. A paper on the subject by N. B. White was also read by Mr. Rich and there was considerable discussion by other members interested in the subject.
 The Gardeners and Florists' Club outing at the establishment of Thomas Roland, Nahant, on April 11, will be one of the most interesting ever held, as members will have an opportunity of seeing what Mr. Roland does in the Easter plant line. Those intending going will leave North Station, Boston, for Lynn at 12:30 and all who possibly can go should avail themselves of this trip.
 J. W. DUNCAN.

STRATFORD, CONN.—The Frank E. Conine Nursery Company have received a car load of exceptionally choice stock from France and Holland. The shipment this year is larger than it has ever been before. This looks as though despite the strenuous times the trade along this line had not been greatly affected, as many of the choicest plants consisting of roses, rhododendrons and evergreens are already ordered in advance. The business of the company has been growing in a marked degree during the past two years.

GREEN BAY, WIS.—Charles De Clerc, North Adams street, was the victim last week of a check forger, losing \$10 for floral designs ordered and \$8.20 in change. The usual game was practiced, and the forger is still at large.

FORT THOMAS, KY.—Otto Bradley, an employee of Smith & Goeckel florists, died on Thursday, March 19, 1908. He was 46 years of age, and single.

New York.
The Week's News.
The Lord & Burnham Company recently had a visitor from the West. A man from Goldfield, Col., came all the way to this city to buy a Burnham boiler. He was in such a hurry for the article that he did not have time to have it sent by freight, but had it expressed at a cost of \$725. The boiler itself cost \$170. This would certainly indicate that the man was in a hurry for a Burnham boiler, and he was bound to get it and have it delivered early at any cost.
Secretary Young of the New York Florists' Club informs us that for the next meeting, which will be held in the Grand Opera House Building, Twenty-third street and Eighth avenue, there will be a very fine display of roses and other flowers. The Julius Roehrs Company, Rutherford, N. J., will send Newport Fairy; the E. G. Hill Company, Richmond, Ind., Rhea Reid; Myers & Samtman, Philadelphia, Pa., Wyndmoor; John Cook, Baltimore, Md., My Maryland; Poehlmann Brothers, Chicago, Ill., Mrs. Potter Palmer; W. P. Craig, Philadelphia, Pa., Mrs. Jardine; W. A. Mandat, South Orange, N. J., the new Cherokee rose; and A. Jahn, New Bedford, Mass., carnation Lloyd. No doubt others will decide to exhibit at this meeting.
Lectures will be delivered in the lecture hall of the museum building of the Garden, Bronx Park, on Saturday afternoons, at 1:00 o'clock as follows: May 2, "A Botanical Expedition to Jamaica and Cuba," by Dr. Arthur Hollick; May 9, "Early-Flowering Trees and Shrubs," by Dr. N. L. Britton; May 16, "Plant Life of the Sea," by Dr. M. A. Howe; May 23, "Ornamental Shrubs: Their Selection and Arrangement," by George V. Nash; May 30, "Plants that

enormous. It would seem that every grower is right in the midseason with his crop, and one wonders what the conditions will be in two weeks from now when Easter strikes us.
N. Lockes & Company, wholesale florists and dealers in Southern green at 53 West Twenty-eighth street, have been incorporated with a capital of \$9,000. The directors are David C. Page, Rich and I. Claus, Donald P. Hayme, all of New York.
John Young is cutting from 300 to 500 special grade American Beauty blooms from his range at Bedford Station, N. Y.
W. J. Palmer, Buffalo, N. Y., and Carl Jurgens, Newport, R. I., were visitors this week.
The members of the New York Florists' Bowling Club at its meeting on Friday, March 27, made the following scores:
Chas. H. Tully, 130 125 111
A. Faulkner, 105 91 101 96

St. Louis.
News Notes.
At the rose show held in Chicago last week those who attended from here were Otto G. Koenig and Fred H. Meinhardt. Fred Ammann of Edwardsville, Ill., was also there; he exhibited some of his well-grown roses in Class B, and from reports of the show succeeded in capturing a number of prizes in this class. The trade here were much gratified over this, as Mr. Ammann's stock is all consigned to this market and handled by Knehn.
It has been reported that the Eggeling Floral Company, Jules Burdett and A. P. Riessen must vacate their places within the next year, as the Shaw Estate on which they are located will be graded and laid out in lots. This tract of land is from Grand and Lafayette avenues west to Vandeventer avenue.
Nat. Kingsley, who was reported missing in last issue, has turned up safe and sound, and reports that he was visiting friends in the southern part of Missouri. His partner, Mr. Sager, is much relieved at the return of Mr. Kingsley.
Fred Foster of the Foster Floral Company was not as badly hurt as first reported, and is out again, but with the aid of crutches.
Ostertag Brothers had quite a busy week in decorative work for Spring openings; C. Young and Sons Company and Charles Beyer were also busy with this kind of work.
For the hardware men's convention held here last week, Miss Badarnacco furnished several thousand carnations which were distributed among the visiting delegates during the week.
The Grand avenue florists—Waldbart Ayers, Bergestermann and Eggeling—are displaying extra fine blooming plants in their show houses. C. Young and Sons Company are the only florists downtown displaying blooming plants. In North St. Louis, Bentzen Floral Company and Adolph Brix have an attraction in fine blooming plants.
Union market florists report a good business week in the plant line.
Herman Riessen died here the past week. Though not connected with the florist business, he was a brother of Mrs. Buechel, head of the Riessen Floral Company. Mrs. Buechel has the sympathy of the trade here.
E. W. Guy, Belleville, Ill., was a visitor the past week; he reports the outlook for a large Spring plant trade good.
The members of the Florists' Club should not forget the April meeting which takes place next Thursday afternoon at 2 o'clock in the new meeting hall, Eleventh and Loonst streets.
The St. Louis Horticultural Society has adopted practical means for the development of "The City Beautiful" by the offering of prizes for the best kept gardens, window boxes and home surroundings. In order to create a keen interest in the competition, bulletins on the care of plants and flowers will be given to all who send in their request to Otto G. Koenig, 6171 Florissant avenue. The Spring flower show was pronounced such a success by the officers of the society that a more comprehensive exhibition soon will be arranged.
St. PATRICK.

Pittsburg.

The Week's News.
Visitors the past week were W. P. Craig and a representative of H. Bayersdorfer & Company of Philadelphia; R. E. Hall of Reed & Keller, New York, and Edwards & Docker's representative, Philadelphia.
The next meeting of the Florists' Club will be held Tuesday, April 7, in our meeting room, and the subject for discussion will be "Easter Stock," with an exhibition of suitable material, also a competitive display of plants. This will undoubtedly prove an interesting subject and will be of help to many who handle stock for Easter.
John Bader has a fine and large stock for Easter—azaleas by the thousands and all other sorts of blooming plants and ferns. His trade the past week has been very satisfactory, shipping business especially.
Blind Brothers are making good progress with their new store room and conservatory on Center avenue, East End, and will be ready for business before Easter.
E. C. REINEMAN.

Detroit.

Trade Notes.
The only redeeming feature to trade last week were the decorations in dry goods and clothing stores; but these jobs are given out to the lowest bidder and therefore pay only very little above the actual cost of doing the work. The carnation glut seems to have passed, thanks to cool, cloudy weather and the crops of the principal growers being exhausted.
For many months local florists have awaited the decision of Judge Murphy in the case of Knauss vs. Leadley. The latter had sold his business to Mr. Knauss a few weeks before Christmas, 1906, presumably on account of his health; but only two weeks after that transaction he opened a store again two blocks from the old location. By the decision of Judge Murphy it is ordered that Leadley turn the flats back to Knauss and that Knauss give the floral business back to Leadley.

Newport, R. I.

A Presentation.
The regular meeting of the Newport Horticultural Society, on March 21, was an important one in that our recording secretary, David McIntosh, who is about to leave Newport to take charge of his employer's estate at Tuxedo Park, N. Y., tendered his resignation, which was accepted, with a rising vote of thanks for his faithfulness in office for over six years. He was presented by the members a beautiful gold watch for himself, and silver ware for Mrs. McIntosh, both gifts being suitably inscribed. Treasurer Colonel A. K. McMahon in making the presentation said, "Since the beginning of the society in 1890, no member has done better work or given more of his time to the society, and for six years as secretary he has done an invaluable work in a trying position. He was the first member to suggest a fund for a building for the society, and through his efforts considerable headway has been made in this direction. This occasion is in many respects a sad one, meaning as it does the going away of one of the society's best workers, but there is one consolation that he is going where he can do better work." Mr. McIntosh was taken by surprise, but in a few words expressed his appreciation of the gifts, that for his better-half being especially appreciated.

At the short business session previous to the presentation, President John T. Allan occupied the chair. Daniel J. Coughlin was elected to succeed Mr. McIntosh as recording secretary, and Andrew S. Meikle was elected in place of Mr. Coughlin as financial secretary. Colin Robertson was elected a member of the executive committee; and the president announced that he had appointed Alexander MacLellan on the board in the place of Alderman B. M. Anthony resigned.

The executive committee presented a premium list for the Fall show which was laid over until next meeting so that the time could be given up to a social session which the committee had arranged, and which was enjoyed to the full by all present.

Notes.

F. L. Ziegler has opened his Bellevue avenue store, and it is one of the most up-to-date on the avenue.

William Anderson has resigned as gardener to Mrs. T. J. Emery, and is succeeded by William Donald.

It was a notable fact that two members of the Newport Horticultural Society—Messrs. James Boyd and George Mackay—should be delegated by the St. Andrews Society to present to David McIntosh on Tuesday evening a gold watch chain and appendage, Mr. McIntosh being an active member of that body.

Indianapolis.

News Items.

The hailstorm sufferers are well on the road to recovery. The present conditions are a tribute to their pluck and energy. August Rieman was one of those not mentioned as a heavy loser; not a hundred panes of glass were left him by the storm. Baur & Smith were among those who sent relief to the southsiders; a half-dozen of their employees rendered valuable service.

The State Florists' Association will hold its monthly meeting April 7.

Three cheers for the Eastern growers at the Rose Show! It will cause our Western leaders to put forth greater efforts, even though their laurels have been many.

Tomlinson Hall market shared in the large buying of the retailers this week. Retail business was satisfactory.

Visitors: Bert Eschner, W. J. Stewart, and J. C. Karius.

I. B.

FORT WAYNE, IND.—For a number of years W. J. & M. S. Vesey, florists, have had their flowers on sale at Lydia E. Auger's, but with the first of March this year have made a change and will not have any agent in the city, but will hereafter sell their flowers themselves direct from their extensive greenhouses on Thompson avenue.

News Items.

James B. Canning has returned from his trip among the florists of New York and Philadelphia. Mr. Canning said he never saw such a great display of flowers as he did in the Philadelphia and New York markets.

William Patry with John F. Wood has returned to his position, after a very successful operation, performed on him for appendicitis.

The many friends of John A. Macrae are very happy to hear that Mrs. Macrae is on the road to speedy recovery from a very serious operation.

George Hunt, a milk dealer, has entered the florist business here. He has built two nice up-to-date greenhouses, each 100x30 feet, on Burnside street, to be devoted mostly to carnations and bedding stock.

G. A. J.

A Boiler Explosion.

A mysterious boiler explosion, which took place Monday, March 23, 1908, at the greenhouses of the South Bend Floral Company, 801 East Duball avenue, South Bend, Ind., wrecked one section of the greenhouse, entailing a loss of fully \$1,500, and injured O. A. Wood, of 724 Blaine avenue, who was working on the steam pipes. No cause for the accident has been ascertained. A new boiler has been ordered and the work of repairing the damaged section is in progress. If freezing weather does not set in, no serious results to the plants are anticipated.

The front of the damaged section was blown across the street and the supporting walls collapsed. The boiler was thrown a distance of 15 feet and fell into the pit. The interior was badly twisted, but the shell of the exterior did not break. Mr. Wood received painful burns about the hands, arms, face and head, but his injuries are not serious. The fire was banked and but 20 pounds of steam pressure were shown on the gauge when it was last looked at.

Trade and News Notes.

Business is in its usual Lenten lethargy with a great many flowers coming in, and not enough sales to move them fast enough to cause any decrease in the glut. Visitors coming to town see windows displaying signs reading: "Roses, three cents; violets, twenty-five cents per bunch of fifty; jonquills, two dozens for fifteen cents; carnations, twenty-five cents per dozen." In this way stock has been moving fairly well. Surely somebody is losing, as the flowers certainly cannot be grown to be sold at these prices.

Mr. and Mrs. W. J. Palmer are visiting New York and Philadelphia. Mr. Palmer is getting in touch with Easter stock for his immense trade.

The weekly bowling party is pretty well attended. The florists have four of the best bowling alleys in town at their disposal. We ought to have some professional players at convention time.

NEW YORK CENTRAL IRON WORKS CO., Geneva, New York

Heating.

Growers' Problems Solved by U. G. Scollay.

I have a greenhouse, 16x36 feet which I heat by steam. The boiler is located at one end of the house, so low that the top of it is 2 feet below the greenhouse floor. The gas bill is too high for the size of the greenhouse. How would it work if I put an elbow at the top of the boiler and run my stack through the greenhouse under the middle bench, and out at the other end, so that I can make use of all the heat which is escaping now? In very odd weather I could use the steam besides. If it works, would it be better to install pipe or fire brick through the greenhouse? W. H. P., Pa.

The smoke outlet from your boiler could be carried through the greenhouse as you suggest. Either brick or tile I would prefer to iron, for it would be safer. The iron stack under the bench would probably become too hot, and be a source of danger. I do not recommend, however, smoke connections of this kind. You say that you heat by steam. It is a very extravagant method to heat a greenhouse, size 16x36 feet, by steam. If you will change your system to hot water, I know that you will save much fuel. I am not claiming that steam is inferior to hot water, but I do claim that for such a small house hot water should always be used, unless taken from a larger boiler which is used for other purposes, where steam is constantly kept up. The boilers you have could doubtless be used for hot water, and if you place twelve lines of 2-inch pipe in this house, I feel that you will see immediate benefit. U. G. SCOLLAY.

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

VOL. XXV. NO. 15

NEW YORK AND CHICAGO, APRIL 11, 1908

One Dollar Per Year

CARNATION CUTTINGS

We are in unusually good position to supply exceptionally well-rooted, healthy stock. We have such a large quantity of flowering plants that we propagate only from heel cuttings from flowering shoots. Our cuttings are rooted in light, sunny, airy houses, and we are sure will satisfy the most critical buyer.

A prominent carnation grower writes: "You seem to be **THE ONLY FIRM IN THE BUSINESS THAT KNOWS HOW TO PACK STOCK AND HAVE IT REACH THE BUYER IN GOOD CONDITION**, and I have always found your cuttings cheaper than the same varieties from others at much lower figures."

While our prices may not always be the cheapest, we certainly can give, quality considered, as good value as, if not better than, is obtainable anywhere.

WINSOR which we introduced last year has proven to be the finest novelty introduced in years. We think it is the most profitable variety grown to-day, considering its fine color, splendid keeping qualities, and productiveness. When properly grown, it leaves little to be desired, and almost everyone succeeds with it.

White Enchantress

the best all-round white carnation, on account of its large size, long stem, earliness, and productiveness. Our White Enchantress, exhibited at the Carnation Convention at Washington, was the only White Enchantress exhibited that received an award.

Strong-rooted cuttings, now ready for delivery, from sand, \$6.00 per 100, \$50.00 per 1000; from soil, \$7.50 per 100, \$60.00 per 1000.

Buyers will find transplanted stock offered from soil well worth the difference in price

F. R. PIERSON CO., Tarrytown-on-Hudson, New York

We offer, also,
BEACON and RED CHIEF, from sand, \$6.00 per 100, \$50.00 per 1000; from soil, \$7.50 per 100, \$60.00 per 1000. Also
VICTORY, MELODY and WHITE PERFECTION, from sand, \$4.00 per 100, \$35.00 per 1000; from soil, \$6.00 per 100, \$45.00 per 1000.
VARIEGATED LAWSON, WHITE LAWSON and RED LAWSON, from sand, \$3.00 per 100, \$25.00 per 1000; from soil, \$4.00 per 100, \$35.00 per 1000.
 We can supply, also,
WINONA and AFTERGLOW at \$12.00 per 100, \$100.00 per 1000.

Vaughan's Asparagus Plumosus Nanus

We handle this Asparagus both in seeds and plants of all sizes, in very large quantities and make very close prices on large amounts on application. Our seed is pure, fresh, of best germinating quality and extraordinary vitality.

Northern Greenhouse-Grown Seed.
 Per 100 seeds, 60c.; 250 seeds \$1.25; 1000 seeds, \$1.00; 5000 seeds \$19.50; 10,000 seeds, \$37.50. Price for larger lots on application.

TUBEROSES

True Dwarf "EXCELSIOR" Strain.

Our stock of Excelsior Pearl has been bred up by many years of careful selection from bulbs producing the shortest stalks with full heads of double flowers. But two or three firms can supply this extra dwarf "Excelsior" strain. First size bulbs, 100 \$1.00 1000, \$9.00.

TUBEROUS BEGONIA

Single white, yellow, pink and scarlet 35c. per doz., \$2.50 per 100; single mixed 30c. per doz., \$2.25 per 100; double white, yellow, pink and scarlet 60c. per doz., \$1.50 per 100; double mixed 50c. per doz., \$1.00 per 100.

Seed Trade Report

AMERICAN SEED TRADE ASSOCIATION.
 George S. Green, Chicago, Ill., president; M. H. Duryea, New York, first vice-president; F. W. Belgiano, Washington, D. C., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; Leonard H. Vaughan, Chicago, assistant secretary.

BINGHAMTON, N. Y.—E. W. Conklin & Son have reincorporated their business with an increased capitalization of \$300,000 to do a wholesale seed business. There will be no change in the business of the company; the new incorporation is made for the purpose of handling the increase of business. The stock is held as follows: Horace E. Conklin, \$200,000; M. N. Rogers, \$3,000; P. J. Quilter, \$3,000; C. P. Woodward, \$2,000; J. C. Hillis, \$2,000. The stockholders are the directors of the company. The life of the corporation is to be 100 years.

SANTA ROSA, CAL.—Luther Burbank, who has lived in Santa Rosa for many years without ever taking part in local political affairs, has come out in a signed statement indorsing the Municipal League movement and agreed to preside at its mass meeting Monday evening last. His action has created quite a stir in the ranks of the politicians. He says: "I believe that the time has come when our city officers should be divorced from politics and when citizenship should be placed above partisanship. Having read the platform and the statement of principles of the Municipal League, I wish to express my appreciation of the movement and my hearty indorsement of its candidates."

SEED TESTS BY THE GOVERNMENT.—The number of samples of seed received for testing has increased rapidly during the year. In many cases more than five samples a month have come from the same source. Up to the present time the number of tests made for one firm or individual in any one month for either mechanical purity or germination has been limited to five. In order to meet the growing demand for this work, arrangements have been made to increase the number of tests for germination not to exceed ten in any one month. The number tested for mechanical purity will remain the same as formerly, not to exceed five a month. **EDGAR BROWN,** Botanist in Charge of Seed Laboratory, Washington, D. C.

THE DEPARTMENT OF AGRICULTURE MAKES A RETRACTION.—In Circular No. 26, issued by the Secretary of Agriculture, among the list of firms published as having supplied adulterated or misbranded seed appeared the name of N. J. Burt & Company, 108 Main street, Burlington, Ia., it having been accused of furnishing the Department with seeds purporting to be meadow fescue, but which, according to the circular, were found to be adulterated. Messrs. Burt strongly denied that any such seed had been purchased of them by the Department or its agents, as the firm does not carry meadow fescue seed in stock. The Department, on investigation, finds that an error has been made in the seed laboratory, and has now re-issued the circular, with the name of Burt & Company stricken therefrom, and the following notice: "The name of N. J. Burt & Company, 108 Main street, Burlington, Ia., was published through error, as the seed referred to was properly labeled by them, and was not offered for sale as meadow fescue." It is needless to say that a great injustice has been done the firm in question, which the present retraction by the Department will fully offset.

Seed Trade Notes.

We have reached "high-water-mark" in the seed sales for the season of 1908 and, surely, the enormous business being done by every member of the trade, without regard to location or particular line, certainly gives ample cause for the very satisfactory feeling that is so manifest among our seedsmen. When the final clear-up does come, I believe it will be found that the total volume of business done in the month between March 15 and the middle of April will compare most favorably with the average of recent years. Yes, we are certainly having an old-time busy seed-selling season; night-work, and even Sunday work, would seem to make as yet no perceptible impression upon the reduction of the orders on hand and coming in increasing volume by every mail.

I have, during the past few days, taken especial pains to find out how well our seedsmen are keeping up with the filling of their orders; and, with one or two exceptions, all would seem to be very much behind in this regard. Some seedsmen say that they are a week, but the larger proportion write me that they are even more behind than even this. There is no better barometer of general seed trade conditions than this test; it tells the whole story. The seed trade in every branch is certainly enjoying a substantial boom this season.

There has been very little time lately to think about anything but filling orders, but the "Proposed Pure Seed Act" of Representative Mann of Illinois, was such a "hot shot in the locker" that our trade has been quite interested to learn how such proposed legislation would be considered by the general seed-planting public. As a whole our seedsmen do not take the proposed measure seriously, as it is so perfectly absurd upon its face. No thinking and proper minded seed planter expects or demands the impossible, and when you arbitrarily say that unless all seeds are ninety-eight (98) per centum pure, that the party selling goods falling below this requirement shall be fined heavily, or imprisoned, or both; you make such an antagonistic plan as opposed to the real facts of Nature, that any such proposed legislation is foredoomed to sure defeat. No, our seedsmen do not take this matter seriously; most opinion looks upon it as simply a political move made to secure the farmer vote for the candidate of the powers "that be." I will not use any more of your valuable space for this subject—only let me say that ninety-eight (98) per centum pure seeds are not as yet a possible reality.

There are now a great number of exhausted stocks on the list; and naturally they would be the most called for varieties of seeds. As I pointed out some weeks ago, this condition of affairs is very much increasing the sales of the more or less neglected sorts. The final result will be a very even clean-out of all seed stocks.

Onion sets are going to end the season in very short supply, and at high prices. Red sets have been practically out of the market for some two weeks; white sets are still obtainable, but in limited quantities and at about \$4 per bushel, a price that reduces the sales to practically retail quantities. As regards yellow sets, these are sold out with many seedsmen, and as it is now so well advanced in the season and the price of over \$2 a bushel considerably, seems so high, there will not be much more replenishing of stocks in this line. It has been years, if ever, since all sorts of onion sets have had a larger or more profitable sale with the entire trade.

One of the very short seed stocks this season has been practically all varieties of Lima beans; and many seedsmen have even now sold so low on them that they have not enough left to carry them over the small counter-cash seed sales of the rest of this month and May. There are still several lots of Lima beans, in various varieties, obtainable from first hands, but the result of last year's poor growing season is so apparent in them that no one would seem to care to risk their sales. Lima beans, at their very best, grow poorly enough.

Sweet corn, in almost all the favorite varieties, is yet to be obtained from the larger seed houses; but only in very limited quantities and by regular customers. Several's Evergreen and Country Gentleman, still hold very firm at \$3.50 to \$7 per bushel, while the early sorts at \$1 to \$2 a bushel are yet to be had. But as the push of sweet corn retail or-

ders has not yet hardly begun to be placed, I expect a sharp advance all through the sweet corn list any day now.

One word and I am done for this week. Seed and bulb novelties are selling hard this season. Outside of "Burpee's Spencer Sweet Peas," "Toddington's Lady Lenox Cosmos," and one or two others, sales have been very light as compared with the great run for standard seeds. But this is an after-panic year, a year for the sales of solid business seeds. In bulbs or plants I do not call to mind anything that is enjoying much of a run. Some few of the vegetable seed novelties are doing fairly well, but nothing alarming; Livingston's New Coreless Tomato is perhaps the most prominent.

Good weather from now on makes sure a great season. V.

IMPORTS OF SEEDS, ETC.—March 31.—Dr. N. L. Britton, one box plants; April 1.—D. Schmidt, one case plants; Wadley & Smythe, four cases plants; P. H. Peary Company, four packages trees and plants; Maltus & Ware, 10 cases plants; Davies, Turner & Company, four packages bulbs, etc. April 2.—Funch, Edge & Company, one crate trees; Ammermann & Patterson, 14 cases plants; C. C. Abel & Company, 36 cases bulbs; L. D. Crossmond & Company, two cases plants; H. Frank Barrow, 154 cases plants; Wm. Elliott & Sons, 20 cases plants; McLutheison & Company, 34 cases plants, three packages plants; Maltus & Ware, 39 bushels seed, 110 cases plants, 45 cases trees, six tubs trees; H. Nungesser & Company, 30 bags grass seed; P. Onwerkerk, 95 cases trees; Julius Roehrs & Company, 11 cases trees; C. B. Richard & Company, 55 cases trees; Julius Roehrs Company, 25 cases trees and shrubs; C. B. Richard & Company, 178 cases plants, etc.; Vaughan's Seed Store, 24 cases plants; Wadley & Smythe, 25 cases plants; Cockley Milling Company, 155 sacks clover seed; Maltus & Ware, three cases plants. April 3.—Davies, Turner & Company, two packages plants.

European Notes.

There is no fear of a water famine for some time to come, for the clerk of the weather has been away on a vacation this week and left the rain tap turned on with the result that we are simply deluged. At the same time the atmosphere is warm, so that our seedlings that are not drowned may pull up a little of the lost time.

The heavy rains have seriously retarded the planting of our beets, some of which are still in the siles. We are, however, able to see already that this will be a short crop again this year. Many of the plants are small and poorly developed and under most favorable conditions can only produce a very light crop, while any unfavorable change will cause them to perish. The foregoing remarks apply to all varieties of table beets; there will be no surplus.

The mangel plants are doing better at present. One of the London firms is claiming that a variety of mangel which it offers keeps good for fully 13 months after lifting and the roots exhibited at the Smithfield show in December last fully substantiate the claim. The variety greatly resembles, if it be not identical with, a variety introduced by another London house a few years back for which it was justly claimed that it was the heaviest cropping mangel in commerce, so that here we have quality and quantity combined.

H. Nungesser of New York was on the clover market in London recently, and the result of his operations has been to harden values for red, and encourage holders to believe that their patience would be profitably rewarded.

EUROPEAN SEEDS.

TREE AND GRASS SEEDS IN GERMANY.—I take pleasure in reporting as follows: Pinus sylvestris (Scotch fir) failed almost entirely in this country; limited quantities of German seed are in the hands of some of the larger seed extracting establishments, which paid particular attention last year to this product of German cones owing to the fact that it is getting more and more popular with the majority of German foresters. It is obvious, however, that the small yield is not sufficient to cover requirements. It will no doubt be necessary to secure a quantity of seed from other producing districts in order to fill the principal demands. According to first German authorities the nearest product which can be recommended to replace German Scotch fir is the Belgian

seed, the crop of which is also limited. In the face of the fact that this year's crop is very short, this species will have to be quoted at abnormally high prices.

Picea excelsa (common spruce) also Larix europaea (larch) yielded no crop this year. The quantities available are proportionately small, but of magnificent growth.

Limited quantities of Abies pectinata (common silver fir) could be harvested this year only in the Black Forest; the rise in the wages of pickers is the cause of the higher prices as compared with normal years. The quality is satisfactory, and early orders for seed required for cultivation in Spring can still be filled.

Pinus strobus (Weymouth pine) produced fewer cones than last year, and good home-grown seed of reliable growth is sought.

All evergreen tree seeds are quoted throughout at higher prices; it must be deemed advisable not to delay buying on account of the small stocks, and it cannot be recommended to put back planting, especially not with fir, as an equally short crop is generally expected next year.

Pinus cembra (Swiss stone pine) again failed this year in Tyrol, and very little could be imported at high figures.

Pinus austriaca (Austrian pine) as well as Pinus maritima (maritime pine) suffice for the small requirements; whereas Pinus montana (mountain pine) and Pinus laricina (Corsican pine) are not on the market this season.

The crop of the various deciduous tree seeds leaves also much to be desired except Quercus pedunculata (common oak) which yielded a short crop on the Belgian-Dutch frontier; the quality is satisfactory.

The parcels which have been taken into the winter stores are not coming very much into question on account of the brisk Fall trade we had; therefore it can only be recommended to cover requirements as soon as possible, if necessary for future delivery.

Acorns of Quercus robur (sessiliflora) (cluster oak) are only on the market this year intermixed with common oak, whereas the genuine acorn, which grows principally in the Spessart Forest, yielded so little that the picking had to be stopped, as it did not pay, the mixed product will therefore have to replace it.

Of Quercus rubra (American red oak), which in previous years could be supplied at reasonable prices, there was such a scanty supply last Fall that prices had to open high.

Pagus sylvatica crop was a total failure this time.

Acer platanoides (Norway maple) and Acer pseudoplatanus (sycamore) failed almost entirely. Of Alnus glutinosa (red alder) very little could be secured. A better yield can be reported of Alnus incana (white smooth alder). Very scanty supplies are on the market of Betula alba (birch). Crataegus oxyacantha (common hawthorn) will suffice to cover requirements, also Fraxinus excelsior (ash); Carpinus betulus (hornbeam) is not on the market, whereas Robinia pseudacacia (acacia, black locust) sufficient to be available.

Both lime tree species, Tilia grandifolia (large leaved lime) and Tilia parvifolia (small leaved lime), came somewhat late and in small lots. Spartium scoparium (broom) is short, and the demand is brisk; nothing could be secured of Ulex europaeus (furze) and Ulmus campestris (elm).

Among American tree seeds those species which have been recommended for cultivation by authorities on forestry deserve particular attention. The popular species Pseudotsuga Douglasii (Douglas fir) is said to have yielded very little, whereas sufficient quantities of Picea sitchensis (Tid-land spruce), Pinus Banksiana (Sir Joseph Bank's pine) and Pinus rigida (pitch pine) may reach the market. The variety of abies such as Abies amabilis (canabilis fir), Abies grandis (California white fir or tall silver fir) and Abies magnifica (magnificent silver fir) leave little to be hoped for after all the reports which have come to hand.

Larix leptolepis (Japanese larch) will no doubt miss this campaign; Japan up to the moment has sent neither reports nor offers.

It can be reported about grass seeds that Agrostis capillaris (creeping bent grass) has yielded an average crop in America, and the quality is good; but the German species, Agrostis stolonifera (horin, or marsh bent grass) yielded only a small quantity, and this is also the case with Aira caespitosa (tufted hair grass) and Aira flexuosa (yellowish oat grass of the trade).

Although Alopecurus pratensis (meadow foxtail) produced a better yield than last year in regard to quantity, high prices had nevertheless to be paid for the better parcels. Anthoxanthum odoratum (sweet scented vernal, true) is again on the market in good quantity at normal prices, but the quantity is limited; on the other hand, Anthoxanthum pulchrum (sweet scented vernal pulchrum) is scarce.

The quality of Avena elatior (tall oat grass) and Cynosurus cristatus (cristed dogstail) is good, and the seeds can be

supplied advantageously. Avena flavescens (yellowish oat grass, true) also Dactylis glomerata (cockfoot), markets of these are high in consequence of a distinctly small yield and because stocks are now limited.

The various kinds of festuca, in the first place Festuca duriuscula (hard fescue) and Festuca ovina (sheep's fescue), are much in demand; what with a fine heavy quality and short yield prices run considerably higher than last year. Festuca ovina angustifolia (fine leaved fescue) had a shorter crop than last season, even Festuca pratensis (meadow fescue) necessitates high markets on account of the smaller crop in America.

Prices of rye grasses, Lolium perenne (English rye grass, perennial) and Lolium italicum (Italian rye grass), advanced from the beginning of the season continuously until to-day, owing to a small yield and heavy demand. Of Phleum pratense (timothy), the yield is somewhat short and quotations run higher than last year.

The brisk demand which had set in last Fall for Poa nemoralis (wood meadow grass) rapidly exhausted stocks, and there are only a few stray lots left for the Spring season.

Poa pratensis (smooth stalked meadow grass), markets opened high this year, as the crop in America was considerably smaller than last season, and it will be safe to moderate expectations as to growth. Poa trivialis (rough stalked meadow grass) can be particularly recommended at reasonable prices in excellent quality.

In regard to the crop of clover seeds the essential feature of the season is that red clover yielded a very short crop everywhere, and the demand is exceedingly heavy; this explains the unusually high prices. Markets of Lucerne, and more especially of the preferred Provence seed, are also high in connection with the shorter yield. White clover is again on the market in beautiful qualities and at normal prices, whereas the crop of alsike is short and prices rule high. Yellow trefoil is very much in demand, and stocks are now limited.

The majority of agricultural seeds, particularly lupins, sainfoin, serradella, vetches, mustard, seed peas, etc., yielded a more or less short crop, and prices had to be raised. Darmstadt, Germany CONRAD APPEL.

CATALOGUES RECEIVED.

J. A. PETERSON, Cincinnati, O.—Price List of the most popular Begonias, Iris and other plants. Adiantum Farleyense is one of Mr. Peterson's specialties.

HARLAN P. KELSEY, Salem, Mass.—American Hardy Rhododendrons, The Right Way to Grow Them; the best Native Species and Hybrids, and other Plants and Bulbs for the Rhododendron Bed; also Andromeda, Azaleas, Kalmias, Galax, Leucothoe, Rare Ericaceae, etc.—Beautifully illustrated, and giving cultural directions and full descriptions of the best varieties.

THE YOKOHAMA NURSERY COMPANY, Limited, 31 Barclay street, New York.—General Catalogue for 1908 of Flowering and Ornamental Trees, Shrubs, Bulbs, Herbs, Climbers, Fruit Trees, etc. This catalogue, printed in Japan, is a most interesting one. It describes fully the great majority of the subjects offered, and is profusely illustrated with gardening views in Japan, plants, flowers, etc. In addition, there are interspersed throughout the pages handsome colored illustrations of Iris Kämpferi, a fine collection of foliage of Japanese Maples, Prunus pseudo-cerasus, Mount Fuji, Viola pinnata var. charophyllodes, Shortia uniflora var. grandiflora, also a collection of Porcelain Flower Pots. The cover designs, also in color, show representations of Nandina domestica, of the flowering cherry, and of the pretty Rosa Yessoensis. Particularly comprehensive are the offerings of Lilies, Tree and Herbaceous Peonies, Iris, Candelias, Conifers, Evergreens, Bamboos, etc.

VEGETABLE PLANTS

TOMATO, Mayflower, Lorillard, Earlham, Early June Pink and Early Jewel, 30c. per 100; \$2.00 per 1000.

BETS, Egyptian and Crosby's, 20c. per 100; \$1.25 per 1000.

CELERY, White Plume and Golden Self Blanching, 20 cts. per 100; \$1.25 per 1000.

PETTER and EGG PLANTS, ready for transplanting, 40c. per 100; \$2.00 per 1000.

R. VINCENT, Jr. & SONS CO., White Marsh Md.

ASPARAGUS ROOTS, Conover's Colossa

Strong, two year old, tied in bundles of 25 lbs. per 100; \$1.00 per 300; \$3.00 per 1000.

Giant ARGENTEUOL, extra strong and fine, 75c. per 100; \$2.00 per 600; \$4.00 per 1000. For STRAWBERRIES and other small fruit plants, etc., send for price list. Address,

CHAS. BLACK, Hightstown, N. J.

DREER'S HARDY PERENNIALS

Largest assortment of desirable varieties. Plants of proper size to give best immediate results. For complete list of varieties see our current wholesale list.

Many planters not thoroughly familiar with this class of plants have an idea that nothing but a large, field-grown clump will give satisfactory returns for the season. This, as experience has taught us, is in most instances a mistake. A vigorous plant of proper size will, in nearly every case, give quicker and better returns than the best so-called "field clumps" that can be procured. It will be noticed that the majority of the stock offered in this list is described as being 3, 4 or 5-inch pots. This does not necessarily mean that the plants have been altogether pot-grown, but that they have been field-grown and dug and potted up during the Fall and early Winter months, and such stock can be planted, even late in the Spring, with practically no loss, which, in the case of clumps, is often quite serious.

HARDY PERENNIAL PHLOX We are Headquarters for these. More than one hundred and fifty thousand one year old field grown plants now in pots

Collection of Choice Standard Phloxes

Aquillon (Tall). Bright Tyrian Rose with crimson-red eye.
Andreas Hoffer (Medium). An early and continuous pure white.
Bouquet Fleuri (Dwarf). Pure white with crimson-carmine eye; free-flowering; each branch a perfect bouquet.
Bridesmaid (Tall). White, with large crimson-carmine centre.
Beranger (Dwarf). Ground color white, delicately suffused with rosy pink and distinct amaranth-red eye.
Bacchante (Tall). Tyrian rose with crimson-carmine eye. (Lara Benz (Dwarf). Lovely carmine rose, with deeper eye.
Champs Elysee (Medium). A very bright rosy magenta of an effective shade.
Eclairer (Tall). Brilliant rosy magenta with large lighter halo; an excellent variety.
Eugene Danzwiller (Tall). Lilac, shading white toward the edges; large white centre.
Esclarmonde (Tall). Lilac marked with white; aniline-red eye.
Graff von Ungerer (Tall). Large flower; white suffused throughout with rosy lilac and dark crimson centre.
H. O. Wijers (Tall). Pure white, with crimson-carmine eye.
Henry Murger (Tall). White, with crimson-carmine centre.
Inspector Felker (Tall). Purplish mauve, washed with white.
Jeanne d'Arc (Tall). A late-flowering pure white.
La Vague (Medium). Pure mauve with aniline-red eye; one of the best Phlox in our collection.

Otto Thalacker (Dwarf). Tyrian rose with red eye and light halo.
Obergartner Wittig (Medium). Bright magenta, with crimson-carmine eye; large flower and truss; the best of its type.
Pantheon (Tall). Bright carmine rose.
Pecheur d'Islande (Tall). Crimson red, suffused with cochineal-red and carmine-red eye.
Pacha (Dwarf). Deep rose pink suffused with soiferino-red and carmine-purple eye.
Professor Schömann (Tall). Pure mauve with crimson-carmine eye; an effective late flowering variety.
Papillon (Medium). Bright violet purple, marked with white.
K. P. Strathers (Tall). Rosy carmine with claret-red eye; one of the best Phlox in cultivation.
Sunshine (Dwarf). Large flower, aniline-red with crimson-red eye and light halo.
Thebalde (Dwarf). Carmine lake with brighter shadings and aniline-red eye.
Von Goethe (Tall). Tyrian rose, suffused with carmine lake and carmine-red eye.

Price Choice Standard Varieties: Strong, one-year-old field-grown plants. 75c. per doz., \$5.00 per 100; \$40.00 per 1000.

New and Rare Hardy Phloxes

	Per 100	Per 1000
Albion. A variety which originated with us several years since. It is a remarkably strong, vigorous grower, producing very large panicles of pure white flowers with a faint aniline red eye. An excellent sort for massing.....	\$6 00	\$50 00

	Per 100	Per 1000

Horticultural Notes.

Those who have some object in their garden they desire to conceal could not do better than to plant along side of it the Clematis paniculata. A strong pot plant would make a good showing the first season, and then there are the clusters of fragrant white flowers in late Summer.

As mentioned before, those who have preserved their holly seeds in moist soil for a year should sow them now. The seeds take a year in moist soil before sprouting. Hollies grow slowly for the first few years from seed, hence those who have facilities should grow them under glass.

The fine tree of Magnolia grandiflora, long an object of interest and admiration, which grew at Broad and Sansom streets, Philadelphia, Pa., in the garden of the Lippincott mansion, has been cut down, we are told, to make room for building operations. The tree had grown there for over 50 years.

What a lovely evergreen is the little Daphne Cneorum! Quite hardy, yet liking a sheltered place. For the sake of its foliage, it is greatly admired in early Spring when every one of its shoots is crowned with a head of pink flowers, and how very few other blossoms equal it in fragrance!

The Winter just over has been a favorable one for evergreens. What little freezing occurred was without cold, high winds, and best of all, the soil was full of moisture. Practically nothing is hurt. When the setting in of Winter finds the soil full of moisture, great injury to evergreens rarely occurs.

The common form of Japanese maple, Acer polymorphum, is not only of shapely growth, but its foliage, near at all times, is of a bronze crimson color in the Fall. It is, too, the one used for stocks for the blood-leaved and other pretty leaved forms of this maple.

Ilex crenata, the Japanese holly having small, bright shining leaves, is quite hardy for general planting. It is much appreciated by gardeners. The berries are of a black color. It is a pity they are not red; it would add so much to its attractiveness.

When planting beech, especially the fern-leaved variety, do not overlook the giving of a severe pruning. Planted unpruned the chances of their living are but small. The beech is on the planter's list of "hard cases" when it has to do with planting.

It is accepted by many as a fact that cherries and many other fruit trees fruit far better when more than one tree is planted than when one stands alone. A single tree in a garden will often fail to fruit well, even when it flowers freely, and often it is from lack of fertilization which the flowers of another tree would accomplish. The hanging of branches in blossom from another tree on the one from which fruit is wished would help matters.

Figs buried for the Winter should be uncovered as soon as Winter is over. Set the bushes in a warm, sunny position. The first crop will start to swell in a short time; and an early start means ample time for the second crop to ripen.

Propagation of Magnolias.

The Chinese and Japanese magnolias are propagated nearly altogether from layers. This is the time to cut down all stool plants in order that strong shoots may be made to serve for layering purposes. Cut them down to within two or three eyes of their base. Then by June many of the shoots will be of length sufficient to layer; and one after another layering may be kept up until the close of August. The layers will root very soon, but all propagators agree that it is much better to let the layers have two seasons for rooting, then to cut them off and let them be set out as separate plants.

It is not often these species seed freely. Of the whole number there is but one that does it—the M. kobus. This one forms seeds for almost every flower, the pods being of most grotesque forms, like young birds, many of them. The well-known Yulan, or Chinese white, M. conspicua, rarely bears seeds. The M. stellata, supposed to be a true species, never seeds, so far as the writer is aware, though old bushes have been under observation. Of the many hybrid forms, the M. Soulangeana, M. speciosa, and like sorts rarely seed, while M. Lenzii is a well-known seed bearer.

Excepting that some of the rarer native species are bodded on other strong growing stocks, such as the tripetala and acuminata are, they are raised altogether from seeds. The seeds of these as well as of all other sorts are collected in Autumn, washed free of pulp, or the pulp rotted off by the seeds being kept a while in damp

Thuja occidentalis.
American Arbor vitae.

sand, and then washed, after which they are placed in boxes of damp soil and kept in any cool place until Spring, when they are sown. Some propagators prefer to clean the seeds of pulp and sow them outdoors in Autumn, but there is no need of this, as Spring is as good a time if sowing is made early; and it may be that preference may be given to sowing them in boxes in a greenhouse.

Golden Forms of Arbor Vitae.

The present golden Arbor vitae of the Thuja occidentalis type is without doubt the one called George Peabody. Its foliage is finely edged with gold the whole season through, and it is particularly pleasing to look at in late Spring, just as its new growth is well formed. There are other golden sorts, as well as some variegated ones, but they do not keep their character so well as the George Peabody, one of them, in fact, almost losing their differing tints at some seasons of the year. The George Peabody has to its credit, too, that it is of the beautiful pyramidal conical shape many of the common Arbor vitas possess, being well filled out in all its parts.

Leaving this section and considering that of the Chinese, the Rollinson's golden leads all others in its desirability. There is no time of the year that it is not good to look at. The color is a bronze yellow, and this color is more intense when the sun has full play on the foliage. It is of much more compact form than the common Chinese Arbor vitae, Thuja occidentalis, while retaining the somewhat flattened outline of it, but its growth is sturdier and slower. This is a gain, for the common Chinese sort grows rapidly, making height without much strength of limbs. By starting with a plant fairly well filled out, then giving attention afterward in the way of pruning, a well rounded conical evergreen can be had of the Rollinson's golden Arbor vitae.

These are two golden Arbor vitas that can be recommended to all planters, good for the lawn and for growing in pots; and this is the season to see to potting or to planting them.

Thuja Occidentalis.

One of the best known of our native evergreens is the Thuja occidentalis, everywhere known as the American Arbor vitae. It is so well known because of the many uses to which it is put, chiefly the planting in close bodies for screening unsightly objects or for windbreaks, and for forming a hedge. For these purposes it is as popular to-day as it ever was, and for the good reason, there is no other evergreen that could take its place to good advantage. Its particular style of growth is what makes it so valuable for the purpose. Note the illustration herewith and then agree with us that there is no other tree that would give the height and take up less space in width than this Arbor vitae does. It is quite common to see trees 20 feet high and but 3 to 4 feet in width at the base. When it happens, as it so often does, that height is wanted where there is no space for a wide-spreading tree, the Arbor vitae is the only available evergreen for the purpose. The photograph is of a typical tree, one planted when young and never disturbed afterward. We consider it a beautiful specimen, and think a great deal of the Arbor vitae as a worthy evergreen for a lawn.

The hardiness of the American Arbor vitae is another point in its favor. Inhabiting the coldest parts of our country, from Canada to Pennsylvania, and particularly the Northeastern States, it naturally is more at home in colder States than in warmer ones, and this accounts for its doing better North than South. It has been found that the Chinese Arbor vitae is a better one for the South than is our own species, the one of which we write.

In its wild state the Arbor vitae is found along the rocky borders of streams, lakes and in swamps, but when in the latter position it is on elevated ground, for when on wet, undrained ground it does not flourish at all. As in all similar cases, this tree does not demand like conditions to its wild representatives. It does well any where where the soil is deep and good; and even in light sandy soils it thrives if the soil is deep, as in that case it is usually moist.

This tree is often called white cedar; and really the common names of trees cannot be accepted as guides at all. The white cedar of older days and botanists is the evergreen known under the old name of Cupressus thujoidea, the well-known cedar of the New Jersey swamps, so it is better always to keep to botanical names as far as possible.

There is another Arbor vitae native here, but in the far off Pacific States, in Washington and British Columbia it is a grand tree, reaching a height of sometimes 150 feet, and its timber is very valuable. Its foliage is of a lively green color, more so than the one of our notes, Thuja occidentalis. The Pacific coast one is the T. gigantea. Unfortunately, it is not hardy, the Winters being too severe for it even in Pennsylvania; but we are still hoping to find a hardy variety of it some day.

JOSEPH MEEHAN.

BOSKOOP, HOLLAND. On Friday, March 20 last, J. Blaauw & Company had the pleasure of receiving a Royal visit from Her Majesty, Queen Wilhelmina and His Royal Highness Prince Henry of Holland. With great interest, and in view of the propagating business, packing sheds and Jeanne's pavilion in the nursery. A fine collection of Cyclohedrons in bloom, which included some seedlings from the new large flowering hybrid kinds, attracted Her Majesty's special attention.

NEPHROLEPIS AMERPOHLI

PHILADELPHIA LACE FERN

\$12.00 per 100, \$100.00 per 1000. 5% off cash with order.

These are good strong plants that were potted November and December last.

We need the room and must move them.

Also a fine lot of 6 1/2 inch pots at 75 cents each, 25 or more at 70 cents each.

This is the most talked about fern of the lot and has been awarded a great many honors, including a medal by the Royal Horticultural Society of London and the "Kilf Cup" by the Pennsylvania Horticultural Society for the most meritorious new plant introduced in 1907.

Equally as good as green for cut flowers or pot culture.

The stock here offered is in superb condition.

WILLIAM P. CRAIG, 1305 Filbert Street, Philadelphia, Pa.

HAVE LILIES FOR ALL

Have lilies, the best in the land the best in the land, the best in the land. Azaleas, the finest colors to beat the band, to beat the band, to beat the band.

If you would know the fairest sight your eyes can ever see, Where the most perfect plants are grown, to Aschmann come with me; Why, ne'er since flowers began to bloom was such a glorious show of all the best that florists need, found in one place to grow. The lilies are the very best yet seen on Easter Day; Azaleas are whole sheets of flowers, perfect in every way. The araucarias matchless are; so are the ferns all green. With bulbs and plumed spires, the best you've ever seen. And Aschmann gives a challenge, let every florist hear, For flowers or prices either, no rival does he fear. If you wish to gather dollars, like violets in the Spring, Then send your largest order—his plants the cash will bring.

An immense stock of choice Easter Plants, blooming Easter week or earlier if desired, are now ready for immediate shipment. Never mind about that nonsense hard time talk. Everybody wants plants for Easter. Wake up, open your eyes; success sure to come. Come and see our activity in shipping azaleas and other plants. Will you follow? Now is the time to order while our stock is large. All get served alike—the man who comes right here to the spot or the party who buys by mail. Don't forget, we have the best Azaleas and Lilies this year in the market, and no joke about it. Our reputation from Atlantic to Pacific in shipping Easter plants for the wholesale market the last twenty years is sufficient ground that we mean business, and have what we advertise.

Have Azalea Indica to beat the band. We take the lead in the American market for them. Were never so nice as this year—good foliage well budbed. We make a specialty of importing every year an immense stock of the choicest varieties, popular in America, grown under contract for us by an azalea specialist in Ghent, Belgium. If you need azaleas, do not look in vain around the country for bargains, but come or write direct to us. We will be able to supply you with the best obtainable for the American market, in medium sizes, full of buds, in good healthy condition, right for Easter.

All our azaleas are planted in 6 and 7 in. pots as soon as they arrive in October from Belgium. In justice to all our azalea buyers, we do not sell any in the Fall (having the best picked out for Fall trade), but keep them all for Christmas and Easter orders. We have a whole house full of Mme. Van der Cruyssen (best double pink) that makes your mouth water, all as round as an apple, covered with buds, 60c., 75c., \$1.00, \$1.25, \$1.50, \$1.75 and \$2.00 each. Next we have Simon Mardner (double pink), Veranoena (rose variegated double), Deutsche Perle (white), Nisbe (double white), Bernard Andrew alba (double white), Prof. Wolters, Empress of India (double variegated).

All goods must travel at purchaser's risk. To save express charges, please mention if plants are to be shipped in or out of pots. Cash with order, please. Strictly no references can be investigated in such busy shipping seasons.

GODFREY ASCHMANN

Importer, Wholesale Grower and Shipper of Pot Plants.

1012 W. ONTARIO ST.

PHILADELPHIA, PA.

ASPARAGUS PLUMOSUS NANUS

Strong plant, 4 in. pot, from seed, 50c. per doz. 100c. per doz. Holly Ferns, 50c. per doz.

R. G. HANFORD, Norwalk, Conn.

gated), Apollo (red), and about 6 more varieties. Prices: 60c., 75c., \$1.00, \$1.25, \$1.50, \$1.75 and \$2.00 each. Only large sizes of Bernard Andrew alba, at \$1.00, \$1.25, \$1.50 and \$2.00 each.

Easter Lilies, Japan Multiflorum, of our own importation, raised from best 10 in. bulbs obtainable. Have the finest lot this year we ever had any season; showing buds now; just right for Easter. Medium sizes 13 in. to 40 in., 10c. per bud for plants over five buds, and 12c. per bud for plants under five buds. About 5000 good plants to offer. Owing to fact that demand every year exceeds supply, kindly send order early as possible.

On account of there being so many diseased bulbs among those obtained from Japan, which have to be thrown out the cultivation of lilies is no longer profitable, therefore we ask our customers to order a reasonable amount of azaleas and other stock when ordering lilies.

Cineraria Hyb. Grandiflora, best improved strain, 5 in. \$2.00 per 100; 6 in., \$3.00-\$4.00-\$5.00 per doz.; right for Easter, in bud, partly in bloom now.

Hyacinths of my own importation, raised from first-class bulbs only. King of the Blues, dark blue; Giant Maitre, lavender blue. Gertrude, pink; La Grandis, white, 4 in. pots, \$12.00 per 100. My hyacinth cannot be compared with those raised from poor, cheap bulbs flooding the market.

Touresol Tulips. This variety is the best double red and yellow variegated, and sells at sight. It is valuable because it will remain open in good condition for 10 days. Price, 3 bulbs planted in a 4 in. pot, \$1.50 per doz., or \$12.00 per 100 pots.

Van Zion Daffodils. This is the best double yellow narcissus on the market; good seller, 3 double-nosed bulbs planted in a pot, 5, 5 1/2 to 6 in. pots, price, \$2.00, \$2.50 to \$3.00 per dozen pots.

Roses, Hybrid, (double European stock), 6 in. pots, three feet high and over, such as Paul Neyron Irish Brunner, Mrs. John Laing, 50c. to 75c. each. Hermosa and Baby Rambler roses, 5 1/2 in. pots, 10c. to 50c. each.

Paris Daisies—5 1/2 in. pots, 25c. each. Moon Vines, or the well-known Ipomoea Multiflora, which produces flowers as big as a saucer, free bloomer, very fragrant, and for which I have a reputation as grower and shipper all over the country for the last twenty years, now ready, 2 1/2 in., \$5.00 per 100.

Araucarias Robusta, Compacta and Excelsa. A perfect marvel of nature. We are one of the heaviest importers and growers of this beautiful decorative plant, the Araucaria. Prices: 6-7 in. pots, 6-year-old, 4-5-6 tiers, 28 to 40 in. in height, the same in width, only \$3.00; 6-7 in. pots, 6-year-old, 4-5-6 tiers, 25 to 28 in. high, \$2.00 and \$2.50; 6-7 in. pots, 5-year-old, 3-4 tiers, 18 to 25 in. high, \$1.50 to \$1.75. Excelsa, 6 in. pots, 5-year-old, 5 tiers, 22 to 25 in. high, \$1.00; 6 in. pots, 4-5 tiers, 4 1/2 year-old, 18-20-22 in. high, 75c.; 5 1/2 in. pots; 3 to 4 tiers, 8-10-14 in. high, 50c. each.

Ferns. Raised in pots, not lifted from benches. Nephrolepis Scottii, 6 in. pots, 50c. to 75c.; 7 in. pots, \$1.00 each. Nephrolepis Piersoni, 5-5 1/2-6 in. pots, 35c., 40c., 50c.

Nephrolepis Bostoniensis, 8 in. pots, made up of three plants as big as a washbub, \$1.25 to \$1.50; 7 in. pots, 75c. to \$1.00; 6 in. pots, 50c.; 5 to 5 1/2 in. pots, 30c., 35c., 40c.

Nephrolepis Whitmanii, 8 in. pots, as big as a washbub, \$1.25 to \$1.50.

Ferns for Dishes, 3 in. pots, 7c. each. Amerpohli, the new lace fern, 5 1/2 in. pots, 50c. and 60c.

Kentia Forsteriana and Belmoreana, 4 in. pots, 8 to 20 in. high, 35c., 5 1/2 in., 5 1/2 in., and 6 in. pots, bushy, stocky plants, 50c., 60c., and 75c.

Ficus Elastica or Rubber Plants, home grown and Belgium stock, 18-25 to 40 in., 5-5 1/2 to 6 in. pots, 35c., 40c., 50c., 60c. each; 7 in. pots, 75c.

Begonia Flambeau, sells at sight, 5 1/2 in. pots, 25c.

Begonia, new improved Erfordi, 4 in. strong, 20c.; 5 1/2 in., 25c. each.

Primula obconica, in bloom, 5 1/2 in. pots, 25c. each.

Hydrangea Otaksa. This is the best pink variety, already in bud, just right for Easter, 6 to 7 in. pots, 40c., 50c., 75c., \$1.00, \$1.25 each.

Spirea Gladstone. We offer only large stock, our own importation, 6-7 in. pots, in bud now, just right for Easter, 50c., 75c., to \$1.00 each.

200 VINCA VARIEGATA and 35 GREEN VINCA

2-year-old, 4-in. pots, from 10 to 16 shoots, good and strong plants, \$10.00 per 100.

THE WEEK'S WORK

Timme's Timely Teachings.

Easter.

It is unlikely that among the thousands of florists, all fully aware of what Easter means to them and their business, a single one could be found yet unprepared for the holiday, still waiting for his cue, the rallying cry: "Bestir yourself; get ready!" The real weight of the thought that to be in readiness for any one of the great holidays is of prime importance rests on the mind of the plant grower for months, yes, for often more than a year before the arrival of these events, so anxiously looked forward to. Easter with us is one of the busiest, and in preparing for it brought this year somewhat more than its allotment of work and worry. The local florist after years of practice learns to understand that with proper judgment and attention to order, system and neatness in final arrangement much more may be accomplished during the last days before Easter toward securing his rightful share in the anticipated rush of trade than by any belated over-exertion in his capacity as a grower to overcome impossibilities. Taking good care of the stock now ready or promising to come to a finish at the last moment is now of foremost importance. All flowering plants, hard-wooded stock in particular, roses, deutzias, plums, hydrangeas, azaleas, spiraeas, even if kept in ever so cool a place, must be watered regularly and faithfully lest a single drying out of the roots now might result in utter ruin, or at least great decrease in value. It is not too late to stock up in some lines of holiday supplies, specialties, Easter novelties, even in plants conveniently to be obtained, should this seem needful. It is better in every way to be well supplied with anything certain to contribute to the volume of trade and not likely to amount to an actual loss if not disposed of at Easter, than to run the risk of losing sales by not having it in stock or being compelled to waste valuable time in trying to procure it when the rush is on. There is also still time to be found in this short last week for the filling of baskets, dishes and boxes with bulbs of all flowering kinds and plants of various species, now in bloom, and for the making up of tastefully arranged plant pieces in many ways, suggesting themselves to the alert mind of the experienced in this line of business. There should now be a vast amount of suitable material for the purpose in and about the establishments of actual growers. Never crowd the more expensive and principal subjects in making up elaborate plant combinations; it mars the effect aimed at with flowering as well as foliage plants. Rather be less sparing in the use of rooted sprigs and small plants of such kinds as tradescantia, panicum, ferns and lycopodium, all most serviceable in covering with living verdure every remaining bare spot. The filling of high-priced baskets and fancy Easter receptacles with plants from trays or pots—as, of course, also with flowers in a cut state—should be deferred until the last; a few as samples, the remainder to order. The main aim in the final arrangement of all the stock on hand for the occasion, single and made-up plants, decorative greens, Easter specialties, cut flowers and flowers ready to cut, should always be wisely to combine attractive display with the utmost convenience for patrons and attendants in moving about while transacting business at the liveliest rush hours. But at no time should the press of business furnish an excuse for carelessness in the taking or execution of orders or in their being promptly delivered.

The Early Plant Trade.

Ordinarily it requires a full fortnight of balmy, Spring-like weather—only too often followed by another gust of cutting cold—to awaken keen interest in outdoor gardening, to beguile people into the belief that bleak Winter has departed for good. Not so this year. The weather up to date has been anything but agreeable, continues still with but few breaks in its steadfast behavior, to be wet, chilly and unfavorable for any outdoor work. Despite all this, more inquiries have been made respecting character, price and adaptability of plants; and more orders booked accordingly at so early a time

than in previous seasons. Enthusiasm in the beautification of home grounds and in the making of gardens seems to have never before been so markedly keen as this Spring. While this is certainly most encouraging to plantmen in general, to the home grower or local florist the fact that, in this early start of the plant trade hardy roses, hardy climbers, hardy herbaceous perennials led in the call for what was wanted, should prove of special interest, lending as it does additional force to the oft-repeated advice to provide for this particular line of trade so as to be amply supplied at the approach of Spring.

Hardy Stock.

There is no difficulty in finding willing buyers for nearly all kinds of hardy plants, but the florist, locally established, who decides to go somewhat heavily into this branch of business may meet with difficulties in properly keeping and handling a great many kinds. It is wiser to keep in stock ample quantities of the best known, most easily grown and oftenest called for varieties, than a few each of a great many things, most of them untried in his particular locality and some of them sure to prove unsatisfactory.

Most in demand among hardy vines and climbers for permanent planting are clematis, wistaria, humulus, ampelopsis, akelia and climbing roses; hop-suckles, aristolochias and trumpet vines come next, and the number of other varieties occasionally asked for is small, though it cannot be gainsaid that thus many an excellent climbing plant is denied a chance to prove its superiority for certain situations over any of those named. All of this kind of stock, as also garden roses, a few trees and shrubs and the greater part of hardy herbaceous plants and roots, are easily obtained in season, from any reputable nursery, bought and sold while in a dormant state. Unless florists as such are more favorably situated than most of them appear to be for the raising of their own stock of the above-named kinds, they will find buying and selling to be the more profitable way of dealing in stock of that character. Bundles or packages, wrapped and labeled, should on their arrival be undone, each specimen labeled separately, re-wrapped and stored in a moist but cool place or be heeled in open ground. The point of importance is to keep this stock in a dormant condition as long as possible, to keep the roots from drying out, the wood from shriveling or starting into growth, to have all at handy reach and true as to name of variety. Of perennials quite a number are easily raised from seeds or multiplied by division or cuttings. These sell nearly all Summer—some from the open border, others from frames, these mostly pot-grown. Favorites with buyers are hardy phloxes, asters, pinks and ferns, iris, pompon chrysanthemums, Shasta daisies, aquilegias, dicentra, larkspurs, peonies, lychnis, tritomas, campanulas, lily of the valley, pyrethrums, stokesias, digitalis, gaillardias, spiraeas, lobelias and myosotis.

FRED. W. TIMME.

(63) Peonies for Cut Flowers.—Can you tell me which are the best varieties of peonies for cut flowers that would be safe for a beginner to grow in the vicinity of New York?
New York. J. W. B.

—It is difficult to decide what is positively best to grow for any market. Soil, climatic conditions and popular demand all play important parts. Some varieties sell well one year and fall out of use another; some are good keepers and shippers, others are not. The following list of varieties has been grown at the Cottage Gardens (N. Y.) and sold well on the New York market, those marked * having done especially well with us: *Duchesse de Nemours, *Festiva Maxima, *La Coquette, *Mme. Crousse, *Alba Sulphurea, *Alexandre Dumas, *Festiva, *Mme. de Verneville, *Mme. Ducler, *Mme. Forel, *Marie Lemoine, *Modeste Guerin, *Mons. Dupont, *Mons. Jules Elie, *Prince Imperial, *Reine Victoria, *Sarah Bernhardt, *Delicatissima, Couronne d'Or, Delachei, Duke of Wellington, Felix Crousse, Jeanne d'Arc, La Tulipe, Louis Van Houette, Mme. de Vetry, Modele de Perfection, Mons. Bouchardat, aine, Queen Victoria, Triomphe de l'Exposition de Lille, Golden Harvest, Rosea Superba, Officialis rubra fl. pl.
G. W. WARR.

(64) Black Spot on Field Roses.—We have some kind of disease on our rose bushes in the field. About the time the leaves get matured, black spots appear and the leaves turn yellow and drop. What shall we do to check it?
Louisiana. S. S.

—The disease on the rose foliage is no doubt the common black spot, a good remedy for which is found in the following: Take five ounces carbonate of copper, three quarts ammonia; mix with sixty gallons of water; spray the plants very finely and thoroughly once a week, four weeks in succession.

(65) Vegetable Values.—I am a florist in a small town and have never bothered with vegetable plants, as flowers have taken all my time and room. This season, however, I have a lot of the best varieties of vegetable plants started and would like to know what would be a fair price for the following, per dozen: Tomatoes, egg plants, peppers (large varieties), cauliflower, also cabbage and celery by the hundred, transplanted in flats. All to be of suitable size for immediate planting.
New York. QUIZ.

—The best way to arrive at the proper price to charge for the plants mentioned would be to figure up their cost and allow a reasonable profit for the growing. In order to ascertain what other dealers are charging for such stock, we would advise consulting the advertisements of vegetable growers, as they appear in The Florists' Exchange.

(66) Waterproofing Shades.—I wish to make several shades out of heavy cotton cloth on frames three feet by six feet, to use as covers for plants in hotbeds and in cold frames. What I wish to know is, what kind of a preparation can I put on the cloth to make it lasting, waterproof and to strengthen it?
New York. W. F. T.

Wholesale Plants

—In order to make cotton cloth suitable for a watertight frame cover, take linseed oil, three pints; sngar of lead, one ounce; rosin, four ounces. Beat or grind up the lead with a little oil until thoroughly mixed, then add the rest of the oil and rosin. Place the whole in a kettle over a fire and heat it thoroughly. Tack the cloth loosely on a frame and apply the liquid with a brush.

(67) **Nitrate of Soda**.—How would nitrate of soda act on young roses in open ground, and how much should be used? We want something that will make a quick growth. S. S. Louisiana.

—Nitrate of soda, if used at the rate of 200 or 250 pounds per acre, would help to give the roses a luxuriant growth.

(68) **Carnations for City Sales**.—I would like to know what varieties of carnations to plant for shipping to market in cities. What is the time to plant so I can clear the house by March 15, as I grow vegetable plants for Spring sales? Also, what varieties of violets are best for market? P. J. H. Ohio.

—Whatever varieties of carnations are grown, it would be a great sacrifice to throw out the plants in the middle of March, but, of course, if the young vegetable plants for Spring sales are considered more important and profitable than it is possible for the carnations to be, that course would be all right. Among the best varieties for commercial purposes at the present time are White Perfection, White Enchantress and White Lawson for white; Beacon and Victory for red; Harry Fenn and Harlowden for crimson; Winsor, Welcome and Enchantress for light pink; Rose Pink Enchantress; Mrs. Thos. W. Lawson and Afterglow for dark pink. The best time to plant them in the greenhouse will be early in August.

The best violets for commercial purposes are Marie Louise for double and the new variety Boston for single.

THE TRADE ONLY— When Writing Please Mention THE FLORISTS' EXCHANGE.

NEW CANNAS 1908

ROSEA GIGANTEA

This beautiful variety has extra large flowers which are borne in such abundance that the mass of color on each plant is amazing. Single petals are 2 1/2 inches across, color, a deep rich rose, almost a coral carmine. Plants make a vigorous growth, producing unusually fine clumps of green foliage. Height, 4 feet. (A great favorite with visitors to our trial grounds.) Strong plants, \$2.00 each, prepaid; \$18.00 per doz. by express, not prepaid.

GLADIO-FLORA

Remarkable for the unusual shape of the flowers, which look like large Gladiolus. Petals are not long, but short and rounded and so wide they overlap

each other, thus giving a very attractive appearance to the flowers. Color is crimson, changing to carmine rose with an uneven edge of gold to each petal. Height, 3 1/2 feet. Price, strong plants, \$2.00 each, prepaid; \$18.00 per doz., by express, not prepaid.

CANNA METEOR

Meteor is a vigorous grower with healthy green foliage. It is highly valued because of its magnificent flowers, fully four inches across, and abundance of bloom. Color is a deep crimson, very rich; each plant usually throws up five to six trusses of buds which continue blooming luxuriantly all Summer through. Price, plants or dormant roots, 75c. each, postpaid; \$6.00 per doz., by express, not prepaid.

NEW CANNAS OF SPECIAL MERIT

WILLIAM SAUNDERS

(1907) The flowers are large, of splendid form and are borne very freely in immense clusters. The color is a deep rich shining scarlet lightly dappled with crimson. Foliage is a rich bronze.

Height, 3 1/2 to 4 feet. We believe that Wm. Saunders is decidedly the most perfect canna of this type that has been introduced. Those who tried Wm. Saunders in 1907 say it cannot be excelled. We offer plants only; 60c. each, postpaid; \$5.00 per doz., \$35.00 per 100, by express, not prepaid.

60 other Varieties. Send for list and prices

Bloomsdale Seed Farms.

ROSES

The weather in the vicinity of New York has been very erratic, Summer one day and Winter blasts the next, and we can expect more just like it for the balance of this month. Keep the fires going, even if the nights are warm; it is better to leave on an inch of air and a little heat; this makes a circulation that is very beneficial. It is some time yet before replanting and therefore the plants must not be neglected if any returns are to be expected for the flowers; the very best at present bring little. No attempt should be made to hold flowers for several days for Easter; it comes so late that at best there will be but a small advance and pickled stock will find no other place than the ash barrel.

From now on keep the plants as cool as possible, thus making the foliage hard and the blooms large and full, and don't omit regular feeding if you do not want disease the first warm spell. With the exception of Beauty, syringe the plants every clear day as spider multiplies very rapidly, and must therefore be kept in check. Watering from now on is a simple matter, as the plants dry out so rapidly that an overdose is almost impossible. Keep the young stock moving, and never allow it to suffer for want of water, especially the front rows; these will need attention twice a day in clear weather; on the other hand, allow the pots to get fairly dry before watering, as, with the plants in benches, it is better to water thoroughly once a week than dribble along every day; the latter practice results in a weak growth only.

Keep the pots free from weeds, and when well rooted, repot into larger pots; 4 inch is best for all purposes, though if plants are ready to shift now, and will not be needed till late in July, it would pay to use 3 or 3 1/2 inch now and repot later into 4 inch; this will keep them from becoming potbound. When repotting, see that ample drainage is provided, and to the soil a little bone meal can be added at the rate of a 4-inch pot full to an ordinary wheelbarrow load. The soil, of course, should be screened, and the rough parts, such as pieces of sod, etc., make ideal crocking. When potting, have the plants nice and moist, not wet nor too dry, firm them well and then give a good watering, so that the whole ball is nicely moist, not mud, and water slowly so that the soil does not puddle, as this would form a hard crust on the pots. Do not set pots on soil; better remove all or at least part of it and have at least an inch of ashes screened for the pots to set on. Look over the grafted plants frequently and see if the ties are all right; some may be too loose or too tight; a beginner with this class of stock might lose several through this cause.

Asparagus Roots

We offer an extra select lot of two-year-old Asparagus Roots in the following varieties:

NEW CRIMSON CARNATION

HARVARD

New Carnation FAUST (Brilliant Scarlet)

The colors are very rich crimson. The habit is free and continuous, every shoot producing a flower. Blooms borne on long, wiry stems from 24 to 32 inches and over. Price \$12.00 per 100, \$100.00 per 1000. Usual discount on large quantities.

This novelty very fine for Christmas' ductiveness all that can be desired. Price \$6.00 per 100, \$50.00 per 1000. Usual discount on large orders.

Mr. J. D. COCKCROFT, Northport, N. Y.
NEW YORK, January 16th, 1908.

Dear Sir:—We desire to congratulate you on the two varieties of Carnations, GEORGIA, and HARVARD, which you have been sending us. Georgia we consider to be the best white carnation that comes to New York, and can easily sell from 50 per cent. to 100 per cent. more than regular white. Harvard we think to be the best dark red coming here, easier to sell at double the price of any other dark red. With kindest regards, we remain, Yours truly,

TRAENDLY & SCHENCK, Wholesale Florists

A COMPARISON OF COSTS

\$46⁸⁰

Is the cost of a one inch advertisement in every issue of *The Florists' Exchange* for one year, 52 issues. Total circulation, 369,200.

\$140⁴⁰

Is the cost of a three inch advertisement in every issue of *The Florists' Exchange* for one year, 52 issues. Total circulation, 369,200.

\$280⁸⁰

Is the cost of a six inch advertisement in every issue of *The Florists' Exchange* for one year, 52 issues. Total circulation, 369,200.

\$3692⁰⁰

Is the cost of the **one cent stamp** required to mail 369,200 circulars, exclusive of the great additional cost of paper, printing, addressing, etc.

The advertisements in The Florists' Exchange are ALWAYS read. The circular generally goes into the waste basket, *without being read.*

Success with House Plants

BY LIZZIE PAGE HILLHOUSE.

A complete text-book and guide to the care, cultivation and propagation of all plants in the garden and the home.

The volume is written by a woman for women, in plain, concise language, easily understood, and the book has the special merit of giving directions which can be readily followed, the methods prescribed being of the simplest, and the material suggested to be used easily within reach of all.

12mo., 232 pp.; profusely illustrated, with complete and ready reference index to all plants enumerated. Price, Cloth, \$1.00; Paper, 50 cents.

To Retail Florists. The old thought, that it was dangerous for a customer to know much about the care of plants, has passed away, being superseded by the newer and more intelligent one, viz.: that the more successful a customer is with plants, the greater quantity will he or she buy.

We offer Special Inducements to all who wish to handle this book. It is a good seller.

One of Six Houses of Ferns.

House of Hybrid Perpetual, Crimson Rambler and other Roses. Finished Stock.

At Vaughan's Greenhouses, Western Springs, Ill.

AMONG THE GROWERS

Vaughan's Greenhouses, Western Springs, Ill.

There is considerable activity at Vaughan's Greenhouses, Western Springs, Ill., Spring trade having set in quite heavily. The packing and shipping shed, 350 feet long—which divides two ranges of greenhouses, twenty-five in all, each 150 feet long, and running 18 to 25 feet wide—presents an exceedingly busy appearance, in its general trade and mail order departments, every foot of the shed area being constantly utilized for the handling of the large business conducted here.

The stock in the greenhouses is in first-class shape, everything showing unmistakable signs of careful and intelligent culture. An open section of five houses is devoted almost exclusively to ferns, and just now is making a grand showing. The sorts seen are *Nephrolepis falcoides*, *N. Amerpholi*, *N. Scottii*, *N. Whitmani*, and *N. bostoniensis*. Some specimens of *N. Amerpholi* grown in baskets are particularly attractive. In one of the houses is a quantity of well-grown young stock of *Adiantum Farleyense*.

As might be expected there is to be seen a very large and well-grown stock of hybrid perpetual and Rambler roses occupying several houses. In a house filled with potted young stock was noticed at the time of the writer's visit, temporarily located prior to shipment, a standard Crimson Rambler 10 feet high. This was one of a pair specially imported for planting at the gateway to ornamental grounds for train-

ing to a canopy effect. Another house is filled with matured rose stock of all kinds, the varieties including Killarney, General Jacqueminot, La Fiamma, Lady Gay, standard and half standard Baby Ramblers, Liawatha, Débutante, Sweetheart, Tausendschön, Parquhar, Dorothy Perkins, Schneewitchen, Baby Dorothy, Crimson Rambler, Frau Karl Druschki, Olio, Amy Müller, Caroline Testout, Glory Lyonaise, Paul Neyron, Clothilde Souper, American Beauty, Hugh Dickson, White Baby Rambler, Mme. Gabriel Luizet, and Dinsmore. The White Baby Rambler stock makes a splendid showing, many of the larger plants being covered with immense flower trusses.

Among the flowering plants grown for Easter requirements are some genistas of medium size, shapely and well flowered; rhododendrons, hydrangeas, primulas, spiraeas, azaleas, and a nice lot of Queen Alexandra daisies in 4-inch pots. Pelargoniums are a specialty here. There is a nice collection of American varieties; and a number of European kinds which are being tried out for selection. A stock of *Begonia Triomphe de l'Esté* is making a notable showing. This variety commences to bloom in February, and is about at perfection by Easter. They were brought into the house last September in 2-inch pots and are now in 5-inch pots, a mass of flowers which do not seem to drop like those of other varieties. *Begonia Gloire de Sceaux* is also seen to advantage. Several houses devoted to bedding and soft wooded plants look well, the coleris and salvias making a brilliant show. The latter run from 2-inch to 3-inch pots, the larger in full bloom. Verbenas are done well here. There is a large stock in 2-inch pots ready for potting into 3-inch, and to be sent

out as nice branching plants. Geraniums are, of course, to be seen in quantity and great variety. There is a nice house of young chrysanthemum stock, and part of a bench is reserved for plants to be exhibited at the National Flower Show next November, which already are well advanced.

There is a fine house of cannas, with plants in various stages. A house of finished general stock includes some grand specimen plants of rhododendrons, genistas, palms, hanging baskets of *Asparagus Sprengeri*, and *Ardisia crenulata*. Some well-flowered standard plants of *Prunus triloba* are also to be seen.

A house of mixed stock all graded to the concern's catalogue is interesting as forming part of the system employed to take care of mail orders.

A section covering three houses is devoted to decorative plants. Here are to be seen a large stock of kentia seedlings and kentias in various sizes. *Phoenix Rehelenii* is noticed in good commercial sizes, and is much liked here for its growing qualities—it is also a favorite with the customers of the house. There is a nice collection of crotons, and an excellent lot of *Ficus pandurata* in sizes from 4-inch to 10-inch pots. *Dracaenas* are grown in the leading varieties, the stock including several fine specimen plants. An attraction is found in what has been called *Dracena gloriosum* for purposes of distinction, experts so far having failed to determine its proper name. It is a beautiful broad-leaved variety, with variegations running from light yellow to red; very handsome. The original plant came with a lot of imported canes of *Dracena terminalis*. *Araucarias* and *Pandanus Veitchii* were also noticed in good shape.

Chrysanthemum Plants. Advanced Stock at the right is for exhibition at the forthcoming National Flower Show.

Part of a House of Crotons.

At Vaughan's Greenhouses, Western Springs, Ill.

Packing and Shipping Room.

Showing Office Department and Timekeeping System.

At Vaughan's Greenhouses, Western Springs, Ill.

A large shed running from the main one is 250 feet long, and has a 75-foot extension. This is used for the storage of shipping boxes, flats, pots, and other necessaries. The basement of this shed is used for the storage of dormant and other stock, and just now is an important part of the establishment. A carload of box trees has just been put into stock, the lot being described by Mr. Wilson, the manager of the establishment, as the best ever received. *Retinispora pl. aurea* was noted among the stock of conifers. It is in both bush and pyramid form. The bushes have 25- to 30-inch heads, and are 18 inches in height. The pyramids are 4½ feet high. The variety is a light yellowish green in color, and the specimens unusually shapely. For contrast with somber plantings it should prove a grand introduction. Many of the specimens received have been already sold. J. H. P.

maximum of the Odier type, *Medeola asparagoides* (smilax), etc. The medeola at that time was largely used in Germany, especially for hanging baskets and vase work. But America then was not on the jump to hail anything new. In many cases the imported plants were disposed of at prices far below their value. Brethren in the business called frequently and admired the collections and in not a few cases carried away stock. In this way the smilax got scattered, and in 1872 or '73 news came from Boston that the plant was being grown on strings for use, as is in vogue to-day. There is no doubt but that smilax was first introduced into the United States by the firm of Kretschmar Brothers & Company.

"A well informed plantsman advised the firm about 1867 that it would starve if it waited for sales of that class of stock, as the public was not yet educated up to its use. As a consequence most of the valuable plants found their way to the dump heap, and the growing of a general line of bedding plants, together with the production of cut flowers, as carnations, bouvardia, heliotrope, eupatorium, etc., was resorted to.

"One of our new oleanders (*nerium*) was grown in sizes that realized from 50¢ to \$3 per plant wholesale. Tuberoses were forced in the greenhouse for the months of May and June which brought \$5 to \$6 per hundred, and found a ready sale. General Jacqueminot roses, developed in the open ground with endless numbers of buds, taken up with balls of earth and potted in good sized pots, sold for from 50¢ to \$1.50 each. Our good azaleas, flowering in March, were disposed of at half the price they bring to-day.

"For years the *Tettani amaryllis* was increased; stalks realized 25¢, and plants sold at from 50¢ to \$1, but sales were few.

"From 1870 on, the love for flowers and the call for them was on the increase, with little satisfaction as to supply. Bouvardias, which had been grown for flowering, were cut back by New Year's, raised, propagated and potted into 3½-inch pots and later repotted into 5-inch

pots. After a few years these bouvardias were given 6 and 7 inch pots, and made large plants by Spring with numberless clusters of flowers. Plants were sold at from \$4 to \$8 per dozen.

"About 1871 or '72 a new double geranium of a very brilliant scarlet was put on the market under the name of Summit of Perfection. Introduction sales at \$1 apiece were few, but when the next year the plants were thrown on the market by the thousands, everyone who had an eye for something beautiful made a scramble to put in a stock for propagation. After another year standard geraniums, 3½ to 4 feet high, were raised. Imagine the grower, who in those days supplied the wants of Canal street market, opening his eyes, when the first lots of about two dozen standards of Summit of Perfection found their way into that market one night, a sheer mass of fiery scarlet flowers, with not a leaf visible! Just before unpacking time, before daybreak, every seller and buyer collected around the wagon, not believing what they saw. After unpacking the plants soon disappeared at \$3 each. *Fuchsia speciosa* sold at \$2 to \$3. *Fuchsia Elm City*, grown to standards, realized 75¢ to \$1 and more. Azaleas, a white variety of our production, were grown in large numbers, in medium-sized plants, and 5-foot standards, more than three feet in diameter. About a hundred of them served the then firm of Hanft Brothers in their annual decorations for the Arion Ball at Madison Square Garden.

"In those days *Vinea major* was more or less grown by some in small numbers, through the tedious process of propagating by cuttings. We gathered seed and produced with comparative ease thousands each season in various sizes. Meantime the late Julius Kretschmar interested himself hybridizing petunias, and as a result, every year or so, new varieties of beautiful doubles were added to the list of older ones. Plants raised in from Finch all the way to 6-inch pots brought \$8 per dozen for the latter and retailed for \$1.25 to \$1.50 each.

"There is yet living proof to be obtained as regard the truthfulness of these statements."

Reminiscences of a New York Plantsman

Herman G. Kretschmar of the former firm of Kretschmar Brothers, florists, Flatbush, N. Y., among the pioneer plant and cut flower growers for the New York market, recently furnished The Florists' Exchange with a few reminiscences of market conditions and prices as these existed at the time the firm first engaged in business, some 45 years ago. The particulars he gives will, we feel sure, be read with interest by present day growers.

"My father, who was in business in Germany, brought with him when he came to this country in 1861, most of the then novelties of Europe in seeds and plants: There was the choicest collection of Odier pelargoniums, including Lady Pollock, a large collection of azaleas, hybrid roses, a few new oleanders, laurestinus, amaryllis, among which was the famous *Tettani*, *Ficus elastica*, two large collections of the best dahlias, palms in variety, gloxinias, divers stove plants, etc.

"Among the seeds were those of asters, *Viola tricolor*

THE NATIONAL FLOWER SHOW, under the auspices of the S. A. F. O. H., will be held at Chicago, November 6 to 15, 1908. William F. Kasting, Buffalo, N. Y., is chairman of the show committee.

BOOKS RECEIVED.

FERNS AND HOW TO GROW THEM, by G. A. Woolson. Publishers, Doubleday, Page & Company, New York. Price, \$1.18 postpaid. Garden Library Series. Illustrated.

This is a practical and interesting volume, written by a man who knows and loves ferns. After treating on the various structural parts of the plant, the author tells where hardy ferns can be grown, mentioning as ideal places "a ledge or a pile of rocks, a shaded bank, a bit of swamp and a brook, with consequent irregularity of surface, where the gardener may successfully simulate Nature." Comments are made on growing ferns around the house, soils and their making, and some valuable information imparted on moving and establishing mature specimens, transplanting, etc. Ferns in the mixed border are likewise fully treated upon, and the sorts best adapted to this work enumerated. Rockwork for ferns next receives attention, such matters as soils, species suitable for this purpose, together with other accompanying plants, being intelligently dealt with. An interesting chapter is furnished on hardy ferns for indoor culture and how to select them, receptacles, fern dishes and such like being specified and described. The best ferns for a living room during Winter and their treatment, fern rockeries indoors, culture under bell glasses and in the Wardian case, with illustrated instructions as to how the latter are constructed, all receive attention, as does the subject of growing exotic ferns without a greenhouse. There is likewise a chapter devoted to "Aerial Fern Culture," in which the popular fern ball and other ferns are touched upon and pictured. The book closes with an enumeration of ferns for special purposes, being a handy classification of the plants specified in the text.

The volume is profusely illustrated, and should be in the hands of every florist cultivating the plants with which it deals. Particularly will it be found of greatest service to the retailer, who may, with safety, recommend it to his customers, for the sound advice and instruction it contains.

Copies of the work can be obtained through the publishers of The Florists' Exchange at the price mentioned.

Society of American Florists and Ornamental Horticulturists.

Annual Meeting of the Executive Board.

The executive board met at the Prospect House, Niagara Falls, N. Y., March 23 and 24. President Traendly and Messrs. McClure, Hallock, Wirth, Farquhar, Asmus, Young, Stewart and Rudd were present. Messrs. Kasting and Cowell were appointed to fill the vacancies caused by the absence of Mr. Murray and Mr. Beatty. The usual routine business was transacted.

The program for the August convention was discussed and the main features decided upon, the details being left as usual to the president and secretary.

As the charter provides that the main office of the society shall be in the city of Washington, the president was instructed to appoint an official representative of the society in the city of Washington who should maintain such an office.

Mr. Hallock was appointed a committee to revise parts of the proceedings relative to school gardens, to make such additions thereto as seemed advisable and put them in shape for publication for general distribution, carrying out recommendations made by the society.

It was resolved that the president of the society be authorized to offer the silver and bronze medals of the

and therefore the board could not concur, and the matter was referred back to the society for further consideration. It was the sense of the executive board that it was neither feasible nor desirable for this society to attempt to fix the commercial value of any plant or flower under present conditions.

In view of the fact that it would soon be necessary to republish the by-laws, the committee discussed them in detail and recommended certain amendments to be submitted to vote at the next convention, most of them being merely verbal corrections.

An examination of the treasurer's report showed that the society now has in its permanent fund about \$5,300 and nearly \$4,000 in its general fund. This showing was very gratifying to the members of the board and it was believed it would also be pleasing to the members in general.

The members were more than pleased with the hearty and cordial manner in which the local people assisted them in their work and especially with the manner in which Mr. Cutler more than redeemed all the promises made at Philadelphia.

Practically the entire lower floor of the Cataract House has been placed at the disposal of the society as well as the grounds adjoining. This will give ample space for the trade exhibit and the meetings under one roof and on one floor, and will also give room for the planting of flower beds for the exhibition of plant novelties. Mr. Isaacs, the proprietor of the Cataract and International Hotels, assured the committee that he would be glad to have any such planting done and would furnish without charge a competent gardener to care for the plants up to exhibition time. As these accommodations are all furnished without expense to the society, it would seem that the financial results of the convention at Niagara Falls must necessarily be better than ever before.

Following the custom of some years past the accrued interest on both the permanent and general funds was ordered added to the reserve fund.

George W. McClure was appointed chairman of the committee on sports, and J. R. Cloudsley was appointed as a member of that committee, the third member to be announced later.

Mr. Ewing and Mr. Philpott of the Canadian Horticultural Association met with the committee on the last day and arrangements were partially completed for joint sessions of the S. A. F. and the Canadian Horticultural Association, details being left to be settled at a later date. The question of international games was left to the sports committee. It was decided that the bowling games should be held at Buffalo during the last day and evening.

The final resolutions which were adopted with enthusiasm expressed the appreciation of the board for the "many courtesies shown us by everybody we came in contact with during our visit." Ex-Mayor Cutler, Mr. Isaacs of the International Hotel Company and Major Butler of the Natural Food Company and ex-President and Mrs. Kasting were personally thanked in the final resolutions, both for assistance offered and hospitalities extended, and the board adjourned more than pleased with the kindness and courtesies shown and with the highest anticipations for a successful and enjoyable convention.

It should be noted by the members of the S. A. F. that Mr. Isaacs offered, in case enough early reservations of rooms were made at the Cataract House, to reserve the entire hotel accommodations of the building for the members of the S. A. F. If this offer be taken advantage of, it will result in an ideal and unique situation in the experience of the society—trade exhibition, meeting hall and hotel accommodations all under one roof. The rates are from \$3 to \$5 per day, American plan, that is, meals included.

W. N. RUDD,
Secretary.

Alderman Peter Reinberg Re-elected.

Peter Reinberg, the well-known Chicago cut flower grower, was on Tuesday last elected for the third time to the Board of Aldermen of the City of Chicago, with a good majority. Mr. Reinberg received the nomination of the Democratic party, and his nomination was indorsed by the Municipal Voters' League, the United Societies, and the press, on account of his record for square dealing and devotion to the best interests of the city, even in measures at times conflicting with private interests of his own. The Republican party of the twenty-sixth ward, the ward returning Mr. Reinberg, put up a hard fight, but the esteem in which Mr. Reinberg is held by the residents of the ward, and his record, were amply sufficient to assure his re-election.

Peter Reinberg, Chicago.

Re-elected for the Third Term to the Board of Aldermen.

society at the horticultural exhibitions in this country for new and meritorious plants or flowers of American origin, provided that he is convinced that the exhibition at which they are proposed to be offered, shall be more than local in scope and of sufficient extent to warrant recognition by this society. No more than one medal to be awarded to the same plant or flower.

Charles H. Keitsch of Buffalo having been nominated by the Buffalo florists was elected superintendent of the trade exhibit.

The secretary was instructed to correspond with the Census Bureau with a view to having the method of obtaining the census statistics in so far as they relate to floriculture more carefully considered and that certain changes be made which will render the results more reliable and more valuable.

Considerable attention was given the action of the society regarding the nomenclature committee and registration, and it was the sense of the board that the following out of the proposed course would entail an indefinite but large expense on the society in the future

The Golden Rule in Business.

A contributor to the Saturday Evening Post, desirous of ascertaining whether the business world was growing worse or better; whether we are living in degenerate or regenerate days, addressed the subjoined inquiries to a number of American merchants, and from the responses received he has been impressed with "the high purpose and idealism revealed in almost every reply * * * They also reveal a high standard of business honor."

The questions were:

1. Is the Golden Rule practical in the business world? If not, why?
2. Are there any commercial methods sanctioned by trade which do not square with the teachings of Christianity? For example, must a man lie or misrepresent to succeed?
3. What, in your observation, are the great evils, if any, in the business world?
4. Are standards higher or lower than when you entered business?

Among those sending responses was W. Atlee Burpee, Philadelphia, who answers the questions propounded as follows:

1. The Golden Rule is not only practical in the business world, but is an absolutely necessary foundation for any permanent success.
2. It is no more necessary for a successful merchant to lie or misrepresent than it is for a successful minister of the Gospel. In fact, any houses that are known to misrepresent will so quickly lose the confidence of their customers that their trade cannot be permanent.
3. It would be difficult to point out any great evils in the business world to-day so far as general merchandising goes, other than those which have had sensational exposure and which were really a vindication of business as it is conducted by the majority of business men.
4. Speaking for my own line of business in particular—and this is the same, I believe, in business in general—standards are higher to-day than when I started in 1876.

Mr. Burpee's statements will, we think, be accepted as fully meeting the querist's requirements in a general way.

The list of seed houses and concerns connected with other branches of the horticultural industry, some of them in continuous operation for from over a century down to forty, fifty and sixty years, prove that the Golden Rule "the absolute necessary foundation for any permanent success," must have pervaded the transactions of all these firms; and that their business standards were and are such as enabled and still enable them to persist and to keep abreast of modern competitors, whose standards are said by Mr. Burpee to be "higher than when I started in 1876." This is something of which any industry might well be proud, and we think the fact worthy of this particular mention.

We do not believe, however, that the so-called higher business standards of to-day have arisen altogether from any voluntary individual effort at regeneration of trade ethics. The modern merchant in horticultural lines is, to a very large extent, supervised by the operations of our trade organizations, and he must "hew to the line" closer than did his predecessors, who, being less (or none at all) held in check by such bodies, are deserving of all the more credit for their correct business methods that made for the permanency and continuity of their respective houses. And, too, the better education of the public of to-day in matters horticultural contributes its quota toward the regeneration or reformation of business ethics, consequently to the higher standard said to exist now.

There are, however, even to-day too many known instances, where neither the Golden Rule nor any other elevating basic principle, permeates trade transactions. There is still with us the "foul competitor," so forcefully and fully designated and described recently by Mr. Skidelsky; and, we presume, he will remain as long as "man alone is vile." It is natural, however, to suppose that his number will become smaller as the standards of trade ethics ascend; and that if his own unworthy practices do not drive him from business circles, the greater improved moral force with which he is surrounded and must of necessity contend against will ultimately make it impossible for him to exist. And no one will regret his complete extermination, for than the "foul competitor," in any line of business, no baser being ever trod this fair earth of ours.

PUBLICATIONS RECEIVED.

THE WESTERN NEW YORK HORTICULTURAL SOCIETY. Proceedings of the fifty-third annual meeting held at Rochester, N. Y., Wednesday and Thursday, January 22 and 23, 1908.

A most interesting publication, replete, as usual, with valuable information. The report is illustrated, and we observe that this year the portraits of the various essayists are presented with their respective papers. A considerable feature of this document is the publication of brief obituaries of the members of the organization who have died during the year. The membership list is a long one and continues growing. At the annual meeting a suggestion was made by Editor Collingwood of The Rural New Yorker that the society erect its own building in Rochester, which was characterized by President William C. Barry as a "happy undertaking, and something for this society to look forward to." The present report, like its predecessors, reflects great credit on John Hall, the efficient secretary of the society.

OUR READERS' VIEWS

Parentage of Carnation Mrs. Lawson.

Editor Florists' Exchange:

Your correspondent Job says I err in stating that carnation Mrs. Thomas W. Lawson was a cross between Tidal Wave and Daybreak, but this is not so. "Van Leeuwen" was simply Tidal Wave re-named, which fact is well known to many growers. ROBERT CIVATO.

Job Doesn't Know Scripture.

Editor Florists' Exchange:

Such a man as your critic Job, who says "I like correct quotation above everything else," should be more familiar with the Bible, before he draws his illustrations from it. In his Reflections on Current Topics, he writes, "The Scripture distinguishes friends from flatterers, when it declares faithful are the wounds of a friend; such a friend as Nahum was to David, for instance." The fact is, that David was dead probably 300 years before the Prophet who foretold the overthrow of Assyria was born. JAMES BONNYMAN, Warwick, N. Y.

That Hydrangea Question Again.

E. Y. Teas, Centerville, Ind., writes us briefly concerning the communication of Fred. H. Lemon, which appeared on page 311 of The Florists' Exchange of March 7, 1908. Mr. Teas asserts that some of the charges made by Mr. Lemon against him in that letter are not in accordance with the facts, and regrets that the discussion has resolved itself into personal attacks which have no bearing on the main point at issue. He hopes Mr. Lemon will modify or correct the statements made by him, to which he has called his attention in a private letter to that gentleman.

Editor Florists' Exchange:

I believe, Mr. Editor, that an apology is due from me to the readers of The Florists' Exchange and to the Editor, for my share in cumbering the columns of that valuable paper with matters which cannot be of interest to outside parties. Except for this note I shall under no condition answer any assertion made by Mr. Teas, as I do not desire to continue a discussion which certainly has no place in the horticultural press.

My previous article was true as to all salient points, but such discussions do not interest readers, and I shall not continue this one publicly. FRED. H. LEMON.

Formosa Liliun Longiflorum.

Editor Florists' Exchange:

As we are the original introducers of the Formosa Liliun longiflorum we think it will be of interest to your readers to state some facts about these bulbs, as there seems to be very little knowledge as to the origin of this comparatively new type of lily.

As the Liliun longiflorum business is of the greatest importance for our concern in Yokohama, Mr. Uhei Suzuki, the founder and president of our company, did not spare either expense or trouble to bring a lily on the market that could compete in earliness with the Bermuda L. Harrisii. New plantations were started on different islands in the southern part of Japan, with stock from our regular plantations in the vicinity of Yokohama, but they only resulted in entire failures and large loss of money, because, although the lilies produced good bulbs, they did not give the desired results when forced. Finally, Mr. Suzuki discovered on one island a lily of the longiflorum type growing wild. He had the bulbs collected and cultivated in the same way the cultivations are made on the mainland. They proved to be a success, but we had to wait for the results of forcing them in the United States. Three years ago we received the first six cases in miscellaneous sizes of this stock and they turned out excellent. The following year about sixty cases were consigned to us and again gave such satisfaction that we cabled to our Yokohama house to plant as many as possible. As a result we received over 300 cases last year and expect over 2,000 cases the coming season.

The Formosa lily blooms in the month of February on its native island, or about two months earlier than the Bermuda L. Harrisii. The bulbs are thoroughly ripened the end of May when shipments will commence, which we count on reaching New York the end of July or beginning of August. The long rest the bulbs have until they can be potted will be decidedly in their favor. The Formosa lilies should not be forced as hard as the Harrisii lilies, otherwise they grow too tall.

Nothing need be said about the quality of Formosa longiflorum lily bulbs, as they are sufficiently recommended by the growers who have tried them.

THE YOKOHAMA NURSERY CO., LIMITED.

New York.

Obituary

Laurence J. Stuppy.

Suffering a stroke of paralysis at his home, 604 North Eleventh street, St. Joseph, Mo., just one week after he had returned from a trip to the Pacific coast, Laurence J. Stuppy, a veteran florist, died on March 31, 1908.

Born in Ste. Genevieve, Mo., in 1859, Mr. Stuppy moved to St. Joseph with his parents one year later, and had been a resident there since that time. After having been graduated from St. Benedict's College, in Atchison, he learned the drug business, and his first commercial venture was in a drug store on Fifth street, with his brother, J. B. Stuppy. They later conducted a drug store at Sixth and Edmond streets. In 1873 he started a florist establishment, which has been in existence since. He is survived by a widow and six children—two sons, Frank X. and John, and four daughters.

Edward H. Pratt.

Major Edward H. Pratt, president of the T. S. Hubbard Nursery Company of Fredonia, N. Y., died on Wednesday, April 1, 1908. Major Pratt was born in Dansville seventy years ago, and at the outbreak of the Civil War organized a company and with it served through the early campaigns of the Army of the Potomac until after Gettysburg, when with his command he went West and saw service at Chattanooga. He also served as a member of the staff of Fighting Joe Hooker at the battle of Lookout Mountain. Major Pratt went to Fredonia twenty-one years ago to become president of the Hubbard Nursery Company, and served two terms as village president. He was a member of the State Organization of Fruit Growers and of the American Association of Nurserymen. He is survived by one brother, two sisters and three daughters.

Charles Ingram.

Charles Ingram, who was well known as a grower in the locality of Boston, Mass., died Saturday night last suddenly at his home in Wellesley, Mass., heart failure being the cause of death. Mr. Ingram, who was born in Scotland and received his gardening training there, came to this country a number of years ago, first finding employment with the late Charles Evans at Waltham, Mass. He later started in business at Reading, Mass., continuing for some years. He subsequently was in the employ of S. J. Reuter at Westery, R. I., and Reimers of Louisville, Ky. Later he worked for a time in Ohio, but returned to Boston two or three years ago, working for a time with Welch Brothers. He left them to take charge of the Wilson greenhouses at Wellesley, which he left a short time ago going to work for W. J. Dana. Mr. Ingram was unmarried. His only relative in this country is a sister living in New York. J. W. D.

Warren Ewell.

Warren Ewell died at his home on Quincy street, Dorchester, Mass., April 2, of pneumonia after a brief illness.

Mr. Ewell, who was well known in the trade a few years ago, was the son of the late William S. Ewell, who was for many years famous as a florist and gardener in the Dorchester district. His son Warren was brought up in the business and lived in Dorchester all his life. He was associated with his father under the firm name of William S. Ewell & Son. Mr. Ewell was for many years famous as a grower of bulbous plants for the Boston market, his annual output of this stock being very large. He took an active interest in horticultural matters. He was a member of the S. A. F. O. H., Massachusetts Horticultural Society and the Gardeners and Florists' Club of Boston, being one of the original members of the latter body, serving on many of its committees, and for one term was its president. He was 56 years of age and is survived by a widow and step-daughter. The funeral was held from the residence on Sunday afternoon, being attended by many of his former associates in the trade.

The Editor of the Journal of Horticulture, London, Eng., has been obtaining some answers to his inquiry as to whether Scotch gardeners have deteriorated. The gentlemen replying to the question, two of the leading gardeners in the Land of Cakes, believe that the young Scots gardener is holding his own, and is still "a workman who needeth not be ashamed." It is pointed out, however, that "the literary standing of the present-day gardener compares unfavorably with his predecessor, not perhaps his immediate one. But a perusal of the carefully constructed, thoughtful, and truly practical articles which emanated from such men as Donald Beattie, Robert Errington, and Robert Pish, leaves the impression that the place they occupied as journal-writers has not been filled. Barnes of Bleton, too, wrote some of the best, which have never been equalled in the way of being illuminating and original."

NOTES ON WINTER-FLOWERING SWEET PEAS

By J. W. DUNCAN

It is only within the past five years that the growing of sweet peas during the Winter months has developed so that this favorite flower may be had at any time. It is true that before that time sweet peas were grown with more or less success during Winter, but to be developed into the fine flowers of almost any desired color with stems longer than any seen outdoors in the Summer time is entirely another matter.

In the neighborhood of Boston the man to foresee the possibilities of the sweet pea as a florist's Winter flower was William Sim of Cliftondale, Mass., and that he has made the sweet pea indispensable goes without saying.

When this grower first started the cultivation of these flowers the so-called early or Winter-flowering varieties were unknown, but so great strides have been made in the hybridization of these flowers that to-day almost any desired color may be had.

It is just seven years ago since Mr. Sim started growing sweet peas for a Winter crop. The varieties he first grew were the old Summer-flowering types of such varieties as Blanche Ferry, Emily Henderson, Catherine Tracy and Countess of Radnor. Earliest of All, pink, was the first of the Winter types to be grown, followed by Mont Blanc for a white. About three years ago an improvement on Earliest of All came out under the name of Christmas Pink and to-day it is the main crop pink variety. To A. C. Zvolanek, Bound Brook, N. J., belongs the credit of introducing these Winter-flowering varieties, and he certainly has accomplished wonders in a short space of time.

Mr. Sim devotes three large houses to the growing of sweet peas. The first planting is made in the middle of August and flowers picked from this planting about the beginning of October. The second or main crop planting is made about the second week of September and the third or last planting about the beginning of October. Earliest of All and Mont Blanc are used for the first planting. The varieties used for the second planting are Christmas Pink and Florence Denzer, the latter a splendid white which has superseded Mont Blanc. The third planting is composed of many fancy colored varieties which have been found to sell better in Spring than during the Winter months. For the early crop next year Mr. Sim intends growing Earliest of All and Watchung, the latter a white variety which has been proved to bloom very early. Plants for the main crop begin to flower about the second week of January, and for the third crop about the middle of March, which holds on till the outdoor crop comes again.

No change is ever made in the soil in the houses, and the fertilizers used are cow manure and fine ground bone.

A few remarks on the various sorts as we saw them growing a few days ago will without doubt be of interest.

Florence Denzer, which was grown for the first time last year, is certainly a splendid main crop white variety. It is a strong grower; many of the stems which average eighteen or twenty inches in length carry four and five fully developed blooms.

Christmas Pink as a main crop is very fine, but the recessed variety of the same name is a great improvement. It is a much stronger grower and the flowers are much larger.

Le Marquise is a beautiful variety, the flowers being

riety; it is a great yielder, coming into bloom when the vines are only six inches high. The flowers are spreading somewhat after the so-called Spencer type. In short, this is an ideal variety.

Wm. J. Stewart is a dark variety which promises well, but it resembles the Captain somewhat, and it is doubtful if it will prove a greater favorite than that variety.

Mrs. William Sim is a variety of a fine salmon pink shade which, like that of Fisher's Evangeline carnation, is very pleasing under artificial light and is a great favorite with the ladies.

F. J. Dolansky is a pleasing pink variety of the shade of a Daybreak carnation; it is a good grower and will without doubt be a favorite.

Charles H. Totty is a beautiful lavender shade, a very strong grower and will no doubt be one of the best.

Mrs. W. W. Smalley is of a satin pink shade, a good grower, throwing very fine flowers, and although the stems are shorter than those of most other varieties it is so free that it will prove a good commercial sort.

Mrs. George Lewis is a white of the Spencer type, and although the flowers are fine it is not free enough to make it a good commercial variety.

J. W. DUNCAN.

William Sim.

William Sim.

The subject of our sketch first saw the light on June 18, 1863, in the village of Fyvie, Aberdeenshire, Scotland. He is the fourth of a family of twelve children, and all of whom, with the parents, are still living.

Mr. Sim's father was by trade a photographer, but he was also an enthusiastic amateur gardener, and was the originator of several fine varieties of culinary peas and potatoes which were sent out by the well-known firm of Sutton & Sons. No wonder, then, that the younger Sim should have a love for gardening and prove the enthusiast that he has become in after years.

Mr. Sim was only eleven years of age when he started out for himself, and after working for about three years as a farmer's boy he entered the gardens of Dunottar House, near Stonehaven, Scotland, as an apprentice. After serving his term Mr. Sim worked at Rubislaw Park and at Banchory House, two well-known Aberdeen estates.

In the Spring of 1888 Mr. Sim came to America and first found employment with C. F. Johnson at Nahant, Mass. Later Thomas Roland bought out Mr. Johnson and Mr. Sim continued to work for the new proprietor. After six years in the Nahant establishment Mr. Sim made up his mind to start in business on his own account; accordingly he formed a partnership with David Duncan and under the firm name of Sim & Duncan they entered on a general plant and flower trade at Arlington, Mass. After three years Mr. Sim could fore see bigger things ahead, so he retired from the firm and rented the David Allen place at Cliftondale, Mass., on his own account. He continued here for about three years, and still saw expansion ahead of him, so he bought the land where he is now located and at once commenced to build; and although this was only eight years ago the modest small houses that he first started

of a fine violet purple shade; it is a strong grower, of a good habit and many of the stems bear four individual blossoms.

Mrs. Alexander Wallace is a beautiful pea of a dark lavender shade; it has proved a good grower and the flower is of a color that is always admired.

Christmas Captain resembles in color the well-known Captain of the Blues; it is a grand variety and will be one of the favorites.

Jack Hunter is very good, of a light buff color with pink mixture; it is a shade that is very pleasing and the vine is a good grower.

Watchung, as already mentioned, is a fine white va-

achusetts Horticultural Society, and has taken prizes at the exhibitions of the latter. He has a nice home near his greenhouse, where Mr. Sim and the children are the rulers. J. W. Deary.

Anton C. Zvolanek.

Anton C. Zvolanek, Bonad Brook, N. J., who may be rightfully given the credit for being the promoter and introducer of the now popular Winter-flowering type of sweet peas, was born at Konecuburk, Bohemia, Austria, in 1862. After receiving his education in the schools of his native place, he went to Vienna, where he was apprenticed as a florist to Carl Mennel, having been "bound" for a period of three years. Leaving the place he went to Dresden, Germany, where he acquired considerable experience in the growing of such hard-wooded plants as azaleas, camellias, etc. Returning to Vienna he worked for a short time in the city park, there-

Sprays of Sweet Pea Christmas Pink.
Grower, Wm. Sim.

with have been gradually added to until there is now an establishment of eleven houses or about 85,000 feet of glass.

When Mr. Sim first started at his present location he grew carnations, chrysanthemums and violets, specializing with crops like candytuft for Decoration Day trade.

Violets, sweet peas and tomatoes are now the crops that are grown exclusively, the latter occupying the houses in late Spring and Summer when there are no violets in them. Some 20,000 tomato plants are grown indoors, and this season out of doors will be grown a field of 40,000 plants all trained to the single stem system.

Mr. Sim takes an active interest in all horticultural matters. He is a member of the S. A. F. O. H., and the American Carnation Society, and attends regularly their conventions. Locally he is an active member of the Gardeners and Florists' Club of Boston and the Massa-

subsequently going to Warsaw, Poland, where he had further experience as a gardener.

Mr. Zvolanek came to America in 1888, first securing employment with Wm. C. Krick, Brooklyn, attending to that gentleman's flower store and doing a general gardening business; in his spare time also assisting in Mr.

Krick's factory for the manufacture of the now well-known florists' letters. Mr. Zvolanek then worked with the firms of Kogge Brothers, West Hoboken, N. J., and Edwell Brothers of Jersey City, later becoming foreman of the greenhouse plant of Thomas Young, Jr., located in Jersey City, and it was while here that his first wide experience in the cultivation of the Winter-flowering sweet peas began. Three houses, each 75 feet in length, were given up to the growing of this crop.

Mr. Zvolanek had been interested in the hybridization of plants generally, and of the sweet pea, in particular, most of his life. He brought with him when he came to the United States some seeds of peas which he had hybridized in the old country, and began the crossing of these with Blanche Ferry. The first seedling came of the same color as that variety, but the plant was only twenty inches high under glass, and produced about ten single flowers. After much crossing and re-crossing with the parent variety, he secured fine, long-stemmed, large flowers, and plants over six feet high, which were covered with masses of bloom all winter. In 1897 he was able

ORCHIDS

The trend of the times is toward PROSPERITY

ALL INDICATIONS POINT TO A BUSY EASTER FOR FLORISTS

TO be really successful and prosperous, it is imperative that we be fully prepared to grasp all the opportunities that present themselves. The old saying "OPPORTUNITY KNOCKS AT THE DOOR BUT ONCE" is all wrong; the contrary has been proven true time and time again. ☞ Easter will be here next Saturday, and there will be a lively demand for cut flowers, especially ORCHIDS. ☞ It is not many years since ORCHIDS were looked upon as a luxury and could only be handled by a few retailers; they have now become a necessity to every retailer who is up to date, because the flower-buying public demand them. ☞ My consignors include growers of the finest ORCHIDS produced in any country, and for Easter delivery I am taking orders for the following superb varieties:

Cattleya Schroederae, C. Speciosissima, C. Mendelii, C. Mossiae, C. Maxima, Coelogyne Cristata, Cymbidium Eburneum, Dendrobium Densiflorum, D. Wardianum, D. Nobile, Odontoglossum Crispum, O. Rossii, Oncidium Sarcodes, Phalaenopsis Amabilis, P. Schilleriana and Schomburgkia.

Among other flowers I can supply in excellent quality yellow and white DAISIES, LILY OF THE VALLEY, GARDENIAS, LILIES, Etc.

THE TIME TO ORDER IS NOW.

Notes on Winter-Flowering Sweet Peas.

(Continued from Page 511.)

to send to the New York market several hundreds of fine blooms. This variety is now known as Christmas Pink, but it is to-day a great improvement over what it was in 1897. By crossing Christmas Pink with Emily Henderson he secured in 1895 Miss Florence Denzer, which is among the best of his white sorts. Mr. Zvolanek has continued at his favorite work of crossing sweet peas, and now has one hundred different varieties. He has introduced some fifteen of these, all of which are now well known in the cut flower markets throughout the country. A description of the best kinds is furnished in Mr. Duncan's article on the establishment of William Sim, Cliftondale, Mass., which appears in this week's issue. Mr. Sim is one of the largest growers of the Zvolanek type of sweet peas in the country.

Mr. Zvolanek has under supervision several seedlings which promise to be improvements on those already existing.

Mr. Zvolanek says: "The varieties I consider the best for commercial purposes are Christmas Pink, similar to Blanche Ferry in color, Florence Denzer, white, and Mrs. E. Wild, carmine red; these have proved for years to be the money-makers all over the world. Among the last year's novelties Mrs. Alexander Wallace is at the head; everybody likes it as a lavender. Mrs. William Sim and Mrs. F. J. Dolansky in soft pink, have proved splendid sellers. Le Marquis is best in violet. Meteor is a fine scarlet.

"In the new sweet peas which I intend to disseminate this year (in September) the Mrs. W. W. Smalley is a very fine satin pink, and all the growers who received some of the sample seed, here as in Europe, have spoken highly of it.

"Mrs. George Lewis, the orchid-flowering white, I think will outclass Florence Denzer in a few years, as will several other new seedlings of the orchid-flowering type as yet unnamed."

His supply of seed is grown in California and in Europe. Mr. Zvolanek states that the basis of success with this type of sweet peas is to grow them as cool as possible from the start. He says that even a little frost will not hurt them. As soon as they begin to make buds, the night temperature should be raised to from 50 to 54 degrees; this will prevent the dropping of the buds and develop the flowers. The day temperature should be ten degrees higher; even 70 degrees on warm, clear days will not hurt them. He was formerly an advocate of chang-

Sweet Pea Mrs. W. W. Smalley.
Grower, Wm. Sim.

ing the soil for sweet peas every year, but the success which has attended Mr. Sim's plan of not changing the soil, outlined in Mr. Duncan's notes this week, has convinced Mr. Zvolanek that a fresh supply every year is unnecessary.

Well-grown, long-stemmed sweet pea flowers find a ready market always, and the grower of such will have no difficulty in disposing of them, says Mr. Zvolanek.

Fumigating With Hydrocyanic Acid Gas.

Editor Florists' Exchange:

Much has been published in the various trade periodicals during the past few years upon the subject of fumigating greenhouses with hydrocyanic acid gas. I began experimenting with this gas in February, 1904, and have continued using it at different strengths and under different conditions since that time. My experience has been radically different from that of others who have given theirs, consequently a statement of mine may be of use to some brother florist or gardener.

My first experiment was made upon the strength of information secured from the bulletin of some experiment station, I have forgotten which, and the formula used was 1 ounce of cyanide, 2 ounces of sulphuric acid and 4 ounces of water for each 400 cubic feet of space. Fortunately, I was fearful of the results, and used practically an empty house for the experiment, putting in only such plants as I desired to test the gas upon. The result was that every plant was practically destroyed. I made two other tests upon the basis of the information contained in the bulletin, reducing the amount by a few hundred feet each time, with the same results as before. I then sought further information and found an article in the "Rural New Yorker" giving the amounts of materials to be used as follows: 1 ounce cyanide, 2 ounces sulphuric acid, 4 ounces water to each 2,000 cubic feet of space. I used as directed and found no harm done. I then began using the gas made by combining the above specified amounts of materials, upon tomatoes, for the destruction of the white fly (aleyrodes) and continued its use during the remainder of the season of 1904, with gratifying success so far as the destruction of the fly was concerned, but invariably with some damage to the tender young growths of the plants. I had means for opening ventilators from outside, and the foregoing experiments were all made with the house closed for from five to ten minutes, after which time the ventilators were opened as far as the weather would permit without danger of freezing the plants.

I continued the use of the gas along the lines stated, reducing the amount of materials slightly, and using cyanide from 98 per cent. down to 33 per cent., with varying degrees of satisfaction, frequently damaging the plants treated quite seriously, but generally killing the insects, whatever they may have been. I treated nearly all the different kinds of plants generally grown in greenhouses.

During the Autumn of 1906, having been obliged to fumigate a house with no means for opening the ventilators from the outside, I used the same amount of materials for three thousand cubic feet of space, leaving the house closed and locked until morning. I found the fly destroyed and no more damage than was generally done by making the short exposure with the greater amount of material. I have continued the use of and the experiments with the gas until the present time, and I will summarize the results of my experiments as follows: Hydrocyanic acid gas is the most effective, convenient, cheapest and safest (for the plants) insecticide that I can employ, using it at the rate of 1 ounce of 98 per cent. cyanide of potassium, 2 ounces of commercial sulphuric acid (first quality), and 5 ounces of water for each 3,500 cubic feet of enclosed space, the application to be made at night with the temperature of the atmosphere of the house at or below 60 degrees Fahrenheit, if possible, and the foliage of all plants to be dry, and as little moisture as possible in the atmosphere.

My method of application is to have one 4-quart stone jar for each 7,000 cubic feet of space. The cyanide is weighed, in lots of two ounces each, wrapped in paper and taken to the house to be treated. The acid is then measured and put in the jars, after which the water is added. I might say that one-quart glass fruit jars are probably better than the larger stone jars. When all is ready, I take the packages of cyanide and beginning at the point farthest from exit, I drop the packages in the jars and leave the house immediately. No one should attempt to use cyanide of potassium who does not fully realize its deadly nature. It is one of the most deadly poisons known to chemists. The greatest care should be taken that it is kept out of the reach of not only children, but of careless or thoughtless persons. I permit no one to touch it but myself. While I have no fear of it, I take no chances whatever with it. In placing it in the jars, before dropping the first package, I inhale until my lungs are comfortably filled, and do so no more until I am out of the house. Incidentally this makes good exercise for the lungs, as I can now walk the entire length of a 125-foot house opening and closing two doors, without hurry or inconvenience, with the one inhalation.

I have been obliged to buy my materials in small quantity, consequently they have cost me more than if bought at wholesale. Cyanide costs me 50c. per pound, sulphuric acid, 80 cents per gallon. At this price the cost of one ounce of cyanide is 3½c., and of two ounces of sulphuric acid, 1½c., a total of 4½c. It should be understood that the acid and water are measured by apothecaries' liquid measure.

In the light of my experience, I consider one ounce of cyanide for 2,000 cubic feet as dangerous to the plants, and unnecessary.

I might add that I have tried fumigating for the white fly with Persian insect powder, as recommended by a writer in one of your contemporaries, and found it expensive and unsatisfactory.

FOR THE RETAILER

[All questions relating to the Retail Trade will be cheerfully answered in this column. We solicit good, sharp photographs of made-up work, decorations, store interiors, etc., for reproduction here.—Ed. F. E.]

Retail Florist Advertising.

Probably never before in the history of the retail trade has so much advertising for Easter been done as this year. On Saturday, April 4, 1908, The Brooklyn (N. Y.) Daily Eagle had a four-page illustrated supplement devoted to the florists and seedsmen of the City of Churches, in which was contained a very intelligent article covering the different branches of the business, together with brief histories of the concerns mentioned therein. The retailers and growers rose to the occasion, and a liberal advertising patronage was the reward of the Eagle's enterprise. No doubt the firms advertising will also reap the reward of their business acumen as the Eagle is essentially a home paper, and there are many buyers of flowers in Brooklyn. As the Eagle's contributor says: "Nearly every Brooklyn home must have its window-box or bowl of flowers to be happy, and of cut flowers alone it is estimated that \$5,000 worth changes hands each day in this borough. That of itself is enough to support a goodly portion of the 250 men engaged in the florist business here. There is also a steadily increasing demand for growing plants other than Brooklyn's trade mark, the rubber plant. The importance of the work in commerce may be judged from the average business of any one of the biggest retail stores, which is \$100,000 annually."

Among the several portraits of florists appearing in the supplement referred to is that of Major William P. Stead, one survivor of the officers that escaped out of Libby prison February 9, 1864, through a tunnel. The Major is now a florist, seedsman and landscape gardener at Ozone Park, L. I.

In the Washington (D. C.) Times of Sunday, April 5, 1908, F. H. Kramer, florist, 916 F street, N. W., has a full-page advertisement of Easter lilies and other reasonable offerings.

A Japanese Dinner.

A Japanese dinner decoration by an amateur was an effective though simple affair. It was executed by a gentleman who has spent a great many years in Japan, and can, therefore, be relied upon as being typically Japanese and a good example of dinner decoration in that country. The occasion was a birthday party, the

table being set for twelve cover. The decorator stepped out of a touring car with a collection of mysterious looking boxes and bundles, and immediately took possession of the dinner table. The first package to be undone contained several sheets of dyed green moss; the next a shallow oval tin basin about two feet in diameter and three inches deep; this was placed in the center of the table and banked around with crumpled papers taken off the packages. Several other bundles were placed here and there on the table, which, covered with the sheet moss, formed miniature mountains and valleys.

Other packages revealed ferns, pagodas, huts, bridges, boats and a host of other things which go to make a Japanese landscape. The tank in the center formed the lake; this was covered on the bottom with white gravel; a rugged piece of tufa rock made a perfect island, which was surmounted by a pagoda, with an industrious angler sitting at the water's edge. Diminutive goldfish, and a very young alligator, seemed quite at home in the water. Paths were formed by sprinkling fine gravel over the green moss, a stone lantern being placed here and there, along the walk. Japanese flowering almonds (*Prunus biloba*), in full flower and growing, were placed on the ends of the table and mounded over with moss; wires were stretched from one to the other across the table, on which were hung tiny lanterns; these were fitted with two candle power electric lights; this was the only lighting used and the effect was extremely pretty. Small white mice were used for favors for the ladies; these were imprisoned in small gilded cages. Small turtles were given to the gentlemen, and goldfish were used in the finger bowls. D. RAYBUN.

The Benefits of Hail Insurance.

Secretary John G. Esler of the Florists' Hail Association has received the subjoined letter, which is self-explanatory. Mr. Barick's loss was adjusted and payment made within 15 days.

John G. Esler, Secretary.

Dear Sir: No doubt you have received our claim for loss of glass by hail, which occurred April 1. It was one of the most destructive hailstorms we have experienced, ruining our stock of plants, as well as the glass. Our loss in glass was even greater than the adjusters made it, for they overlooked quite a number of panes that were useless. We were very much in favor of quitting the business right on the spot, but the knowledge of having the insurance to help put the glass back led us to new courage, and a hope that perhaps this would be the last one. I trust that it will be the last. Yours very truly,

Seymour, Ind

M. A. BARICK.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

Albany, N. Y.

EYRES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Boston, Mass.

WAX BEOS., 143 Tremont St. Orders for New England States receive our careful attention. We are located in the theatre and shopping district. Telegraph and mail orders solicited. Satisfaction Guaranteed. Established twenty years.

Brooklyn, N. Y.

ROBERT G. WILSON, Fulton Street and Greene Avenue. Deliveries anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders well cared for from all parts of the country, and delivered at Theatre, Hotel, Steamer or Residence. Telephones: Prospect 2840 and 4065.

Chicago, Ill.

HAUSWIRTH, The Auditorium Florist, 232 Michigan Avenue. The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

Dayton, O.

W. G. MATTHEWS, FLOREST, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Denver, Colo.

THE PARK FLOREAL CO., 1706 Broadway, J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Indianapolis, Ind.

BERTERMANN BROS. CO. Our facilities for executing orders in an efficient manner are unexcelled. Our shipping territory includes the surrounding states. High grade flowers; expert workmanship.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of reasonable varieties of flowers always on hand. Wire me your orders.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of reasonable flowers always in stock, delivery facilities perfect.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders, they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

Window Display of W. J. Palmer & Son, Buffalo, N. Y., during Dog Show Week. The Canine was done in Violets.

Retailers desiring a share of out-of-town trade should be represented by a card in this column.

CLASSIFIED ADVERTISEMENTS

Cash with order. Columns under this heading are reserved for advertisements of Stock for Sale, Stock Wanted, Help Wanted, Situations Wanted or other Wants, also of Greenhouse, Land, Second-Hand Materials, etc., For Sale or Rent.

SITUATIONS WANTED

SITUATION WANTED—As second man; roses and carnations a specialty. Wages, \$15.00 per week. Address, Grower, care The Florists' Exchange.

Thirty cents is the minimum charge for advertisements on this page.

SITUATIONS WANTED

SITUATION WANTED—As head or section man, good, all-around knowledge, 13 years' experience. Specially palms, ferns, chrysanthemums, roses, carnations, general line of potted plants, floral designs. Aged 28. State particulars to C. Thimm, 157 West End avenue, New York City.

HELP WANTED

WANTED—Two young men experienced in greenhouse work; steady work. Apply at once to Louis Dupuy, Whitehouse, L. I.

WANTED

A competent man for designing and packing rooms to take full charge. Must be a first class workman on funeral work and be thoroughly experienced in the retail cut-flower line.

MISCELLANEOUS

WORLD BE OBLIGED if any employer could give me information in regard to Gustav Nelson's whereabouts. He lived in Manhattan, N. Y., six years ago, where he was working as a florist helper.

Our London Letter.

BY A. HEMSLEY.

COVENT GARDEN FLOWER MARKET.—Just now we are having a rather quiet time, and some growers must find returns unsatisfactory. The Spring forced roses are at their best; or, at least, most of the varieties. Growers still hold on to the old favorite General Jacqueminot; the blooms are good and the fragrance is better than that found in most reds, but we cannot get long stems with the early blooms. Richmond has been very fine; also Liberty. In Joseph Lowe we have a pink rose that will want some heating for early work. The flowers shown by G. Mount have been remarkably fine, and if other growers succeed as well with it there is no doubt that it will become a leading market variety. I hear it is one of the best growers of all the roses cultivated for early flowering. Mme. Abel Chatenay remains a favorite; there are not many blooms of it seen on the market, but I find that the florists get them direct from the growers, and they are very good. Captain Hayward is another good rose on the market just now; and there is no better white than Kaiserin Augusta Victoria, that is, for long stems. I have rarely seen Niphotos better than we are getting it at present; the only fault is, the stems are not stiff enough, otherwise it is the finest white rose we have.

Best Malmaison carnations remain in favor and have been making 18 shillings per dozen blooms, but second quality flowers are of little value. Mr. Burnett's Marmion has been realizing 15 shillings per dozen blooms. This should be a profitable variety to grow, as it produces more flowers than the Malmaison.

We hear about Mrs. Thomas W. Lawson not keeping up its character, yet I find that from one grower we are getting it better than it was ever seen before, and the growth is perfect. I think that Enchantress requires careful selection for stock; I find that some of the flowers are pale in color, yet from the best growers the color improves rather than otherwise. Winsor is

making headway and all growers like it. I have been trying to make out which is really the best crimson, but from various growers I find a difference. Governor Roosevelt is certainly one of the brightest in color if not quite as large as Harlowarden. In scarlet there is also a difficulty, but I should give first place to Robert Craig and Britannia; and in whites there is no doubt that My Maryland and White Perfection are the best two.

There is a danger of many of the old hardwooded plants falling out of cultivation; even the begonias, which are always appreciated, are scarce this season. The choice sorts of ericas are also becoming scarcer from year to year. We seem to be in too great a hurry for these old favorites now-a-days, but they will be sure to be wanted again later on.

I wonder that the azalea growers do not go in for plants of better shape; most of those seen are too flat. I have noted a few of a more pyramidal form in the market, and I find they make better prices besides selling more readily; even those with a loose branching habit are more appreciated than the dense flat-topped plants.

Pelargonium "Clarinda," a hybrid which has been well shown by Messrs. H. B. May & Sons, may not make an ordinary market plant, yet it is a plant that will sell; the scent and the bright red flowers are attractions which all who have a conservatory will appreciate.

It is remarkable that the hardy deciduous flowering shrubs do not seem to take well in the market; even well-flowered plants of the best lilacs appear to hang, and I find many are spoiled before customers can be found for them.

In my notes appearing on March 7 it should have read that we now have over 1,200 Fellows belonging to the Royal Horticultural Society, not new names added, but every meeting brings a large number of new candidates, and we get crowded sessions at every fortnightly gathering and the displays of all plants in and out of season are well worth a journey to see. But up to the present we have had few really new novelties before the floral committee unless we take orchids, for which there is now a separate committee, and awards for new hybrids have been numerous. Taking last year more awards were given to orchids than all other flowering plants put together. Some years ago it was ferns which received most attention, then pelargoniums; now the latter seem to have quite fallen into the background.

The Echo!

I have been requested by Brother Serik,
To fire to-night a little squib.
My gun is not loaded to kill a bear,
So I point the muzzle anywhere;
But if you get hit by a random shot,
You'll know you are in the delinquent lot.
So mozy right up to Brother Taepke,
Who'll take from you the annual fee.
But if you require the surgeon's art
To extricate the delinquent part,
Dr. Sullivan will apply the steel
And what you owe he'll quickly reveal.
This lagging behind is not just the game
To save our honored, glorious name.
Go down where the big money is to-night,
How much do I owe? I want that right.
The problem that's seeking the working brain
Is how to have all squared up again.
And not lose one from our glorious list,
Though some are far in the hazy mist.
A stubborn donkey hates to be led,
Make haste slowly it may well be said;
Each take a lagging one gently in hand,
Try and persuade him not to disband.
The engine was pulling a heavy load
Up a very steep grade in the road;
The engineer gave a full force of steam,
His credit to save, place to redeem,
But the wheels whirled around on the icy track,
He's not advancing, she's rolling back.
When steam is applied with moderate hand,
The train is found to be at command.
You'll step up to the bar, take a good drink,
Or smoke cigars till you fairly stink.
But when it comes to the paying of dues,
You shrug your shoulders, simply refuse.
Our treasury fund is getting quite low
The exact amount I don't just know,
But there's more standing out than standing in.
Our bank account is getting d— thin.
If we had to pay for rent, heat, light
We would be in a terrible plight!
Bankrupt in few minutes, busted, dead broke,
This is sound sense, boys, not a joke.
There is only one thing to give us relief,
Fix up our credit with us from grief,
And that is a check from each one to date,
Your name will then be wiped from the slate.
Then here's to our future, my heart and hope,
The boys will not be allowed to disband;
And when the next roll is called, by the way,
The boys will all be in the game to stay.

Original Work Among Wild Roses.

Prepared for American Breeders' Association, by Dr. W. Van Fleet, Little Silver, N. J.

When it is considered that more than eleven thousand rose varieties were listed by Simon in 1906, that countless varieties have fallen out of record, that about a hundred new ones are commercially introduced each year and that of this vast host scarcely fifty, all told, are suited for culture in ordinary American gardens, it will be realized that radical changes in breeding ideals and methods are needed, if the really hardy garden types of roses are to be advanced in public favor. By hardiness is meant not only frost resistance, but resistance as well to fungous disorders, such as leaf mildew and black spot. The latter is the bane of modern rose gardens and effectually bars the outdoor cultivation of scores of the most desirable varieties of the hybrid perpetual and hybrid tea classes. Apparently the only means of overcoming this serious defect and of breeding in new and distinct characters is by the free use of vigorous species and well fixed natural varieties. Something has been accomplished within the last fifteen years by the use of such robust Asiatic species as *Rosa rugosa*, *R. Wichuraiana* and *R. multiflora*, but the surface of hardy rose breeding possibilities can scarcely be said to have been scratched. The work of breeding wild roses by selection and hybridization with kindred species and garden varieties is arduous, slow and affords only an infinitesimal chance for pecuniary returns. The standard of perfection in rose blooms is now high and only those approaching in finish the difficult varieties are likely to be tolerated, even if borne on the most rugged plants.

The writer has been working with native and old-world species for many years with moderate success, but at nothing like the rate of progress that was hoped for at the outset. Native roses are particularly trying, many appearing sterile with any but their own pollen, while others, though susceptible to hybridization, show little change in the cross-bred progeny. *Rosa lucida* rarely perfects seeds when treated with foreign pollen. Out of, perhaps, 1000 pollinations with many species and varieties a dozen hybrids of this common Eastern species with *R. rugosa* and *R. spinosissima* were raised. In the *rugosa* cross the plant is more vigorous and thorny, with larger single flowers and broad shining, but not rugose foliage. The Scotch rose hybrid is of weak growth, with pale imperfect blooms; not promising. Three successive generations of *lucida-rugosa* seedlings, most of them pollinated with other rose species and varieties, have been grown, but no further changes are apparent. *R. lucida* with *R. Wichuraiana*, however, has yielded one of the most robust hybrids we have ever seen, of semi-sarmentose or climbing habit with profuse corymbs of large, single bluish-white blooms. A plant in six years' growth, without support, forms a mound of foliage eight feet high and more in diameter.

No success has rewarded attempts to breed *R. carolina*, *R. Fendleri*, *R. Woodsii*, *R. arkansana* and *R. Sayi*, which latter appears to be regarded as a variety of *R. acicularis*. All are completely sterile to foreign pollen under our cultural conditions. The self-fertilized seedlings of *R. Sayi* vary considerably and superior varieties might in time be developed by selection.

Rosa nitida has proved the most tractable of this type of rose. Very handsome hybrids with single to quite double blooms of good size, ranging in color from light pink to deep crimson, have been secured by first crossing with double-flowering varieties of *R. rugosa* and breeding the hybrids to the most robust hybrid perpetuals. The habit of the latter crosses is upright, with abundant shining rugose foliage and prickly stems. They bloom abundantly in Spring and occasionally during Summer. The fruits are intermediate in size between those of the parent species but endure until late Autumn.

Rosa setigera has been disappointing. There is little difficulty in securing densely double-flowering hybrids of good color, but the plants fall off in vigor and do not maintain effective foliage. A pretty cross or two was made with tea roses, but the plants were tender and very susceptible to mildew. The species is hardy, resistant and deserves further attention, as it is credited with producing *Prairie Queen* and other useful hardy climbers as a result of crossing with noisette roses.

Foreign Species.

Rosa ferruginea produced, when crossed with a hybrid China variety, a beautiful bright pink bloom of moderate size so densely double that it is a veritable pompon, borne on a stout, thornless plant with reddish foliage. Unfortunately this very interesting hybrid is difficult to propagate and may soon be lost.

R. moschata crossed with garden varieties of the Bourbon rose has given some attractive and free-blooming dwarf plants with large single and double flowers, deep

colors of red predominating. There is more tendency to stripings and variegations with lighter colors than in the seedling of any other species.

R. rubiginosa blends freely with many other hardy varieties, but crosses with difficulty, if at all, with roses containing blood of the tea-scented kinds. Several hundred seedlings have been raised, most of them equal, but few superior, to those produced by Lord Penzance of England. A selected *rubiginosa* X Fisher Holmes (hybrid perpetual) grows 10 feet high and produces very brilliant semi-double crimson flowers followed by large clusters of conspicuous orange red fruits.

R. laevigata can be induced to form viable seeds with pollen of a considerable number of species and varieties, but our seedlings, even under careful greenhouse treatment, have not reached the blooming age, though many grow with considerable vigor for a year or two. *R. Wichuraiana* pollinated with *laevigata* has given a hardy and beautiful climbing rose with large shining foliage, and enormous semi-double white blooms, yellow in bud. It is apparently a variety of much value. Seedlings of *laevigata* crossed with the best white teas and hybrid perpetuals are again under way, but are likely to perish as before. The only known commercial hybrid of the Cherokee rose is *Anemone*, with large single pink flowers. It is supposed to be a blend of *laevigata* with a tea rose.

R. multiflora has great promise as a breeder for garden roses. The type readily produces densely double blooms of good size, as a result of crossing with superior garden varieties. Crimson Rambler and others of the polyantha section are being widely used as seed on pollen parents and with excellent results. *Multiflora*

continuous blooming roses of *Wichuraiana* character. This has seldom been accomplished by direct crossing, but many dwarf continuous blooming plants result from seeds of characteristic *Wichuraiana* hybrids, either self or cross-fertilized. They are seldom of any value from a rosarian's standpoint.

Rosa rugosa is plainly the most hopeful species for breeding high-class garden varieties. The hardiness, vigor and handsome foliage of the species and its immediate varieties, together with the great size and fragrance of the flowers, and long blooming season, at once place it beyond comparison. The work of amelioration has been found to be slow and difficult, though steady progress is made. More than one hundred hybrids and varieties have been introduced to general cultivation and scores of good ones are still in the hands of originators. Contrary to experience with *Wichuraiana*, the best results are gained in dilute *rugosa* crosses. It is necessary to remove two or more generations from the wild type to gain texture of petal and purity of coloring. This has been done in such superior varieties as *Conrad Ferdinand Meyer*, the result of a double cross represented by *Gloire de Dijon* X *Duc de Rohan* (hybrid perpetual) X *rugosa Germanica*, the last a hybrid between *rugosa* and a Provence rose. The blooms are perfect from the fancier's viewpoint and are most freely produced throughout Summer, but the rugose foliage has vanished. The writer has produced, by pollinating a selected double-flowering hybrid *rugosa* with *Victor Hugo*, a plant of extreme *rugosa* character, but with large densely double blooms, scarlet-crimson in color, but of such fire and brilliancy that they even surpass those of its glowing pollen parent. Other crosses of

Rose Newport Fairy

Courtesy Julius Rechts Company.

Persian Yellow has produced with us a climbing variety having buds of flaming nasturtium scarlet, opening into yellow double blooms, which successively change to white and finally to pale rose.

R. Wichuraiana has leaped at one bound to a foremost position among rose species desirable for breeding. Thousands of hybrids have been raised in all rose-growing countries. Something like fifty-four named varieties of *Wichuraiana* parentage had been put in commerce by the end of 1905, and others appear each season. *Wichuraiana* hybridizes so readily that it is scarcely possible to grow the species true from seeds, if other roses in the vicinity bloom at the same time. Its late season of flowering and facility of bud propagation are all that will save the type from disappearing under cultivation. It appears to blend readily with almost all species and varieties, the hybrid blooms largely taking on the characteristics of those of the pollen parent, while the plant retains much of *Wichuraiana* habit. Some of the most beautiful new garden roses owe their attraction to *Wichuraiana* influence. So far, however, the greatest success has been with direct or bi-specific hybrids. Attempts to grow secondary and dilute crosses, though very general, have not met with conspicuous success, the offsprings reverting or falling off in quality to a remarkable degree. There is widespread desire to produce

white *rugosa* on *Clothilde Souper*, a tea-polyantha variety, resulted in the splendid continuous-blooming varieties, *New Century*, white, bluish center, and *Sir Thomas Lipton*, pure white, that are well worth growing in the most exclusive gardens. The possibilities of *Rosa rugosa* are slowly yielded, but will be of overwhelming value to future breeders.

Something should be said of *R. spinosissima* and *R. lutea* in their best garden forms. The Scotch rose and *Harrison's Yellow* both hybridize well with *rugosa* and have produced very attractive varieties. The writer has not succeeded so well when using *Austrian Copper* and *Persian Yellow*. Hopeful species for breeding that should be introduced in this country are *R. gigantea*, a large-flowered climbing species, native of Burmah, that has produced a superior variety in Portugal, by crossing with *Gloire de Dijon*, *R. Hugonis*, yellow-flowered, and *R. Soulieana*, with white flowers in corymbs, both native to Western China.

The Japanese Government is importing large numbers of yucca plants from Chili. The tops of the plants are said to contain an abundance of picric acid, which the Japs use in the manufacture of shimose powder, the high explosive employed with deadly effect in the war with Russia.

Philadelphia.

Club Meeting.

The club meeting on Tuesday evening was well attended. President Halman occupied the chair. The essayist was Robert Pyle, president of the Conrad & Jones Company, West Grove, Pa., his subject being the important one of "Advertising," and he handled it most interestingly and instructively. The various media, such as catalogues, the gardening magazines, women's papers, trade periodicals, etc., were all touched upon and their several advertising values described. Mr. Pyle humorously referred to the amount of free advertising the gentleman from Indiana had received on account of the discussion over the name and identity of the hydrangea. The paper in full will appear next week.

A discussion followed, participated in by Messrs. Watson, Clark, Thilow, Aschmann, Kift, Wallace and others.

As showing the longevity of advertising, Mr. Watson told of a case where an advertisement of mushroom spawn inserted by him in a farm paper had brought an order ten years later. The order was filled with the same spawn as advertised—but from fresh stock (Laugh-ter).

Mr. Clark gave some sound advice on advertising generally.

Mr. Kift cited an instance where a well-known florist supply house in Philadelphia had received an order from an advertisement, which had appeared in a trade paper a dozen years previously, and the house was fortunately able to furnish the goods asked for—after a dozen years!

Mr. Aschmann advised persistent advertising as the only way to make it profitable; he had begun in a small way, and now, as every reader of the trade papers knows, he is one of the largest advertisers in this business.

Adolph Farenwald then gave an interesting account of his trip West during rose show time; he spoke enthusiastically of the great establishment of Poehlmann Brothers Company, and paid a high compliment to the business ability of August F. Poehlmann, the founder of the concern. The superior quality of the stock seen at the Chicago rose exhibition was also referred to by Mr. Farenwald, who firmly believed that every Easterner returned home from Chicago "smaller, but wiser men."

Robert Kift gave an entertaining account of his recent visit to the Waban Rose Conservatories, Natick, Mass., and spoke very highly of the White Killarney rose as seen growing there, especially commenting on its freedom from mildew. The word "mildew" reminded George Watson of a story which ran something like this: A gardener was visiting his neighbor and noticed that his roses had a bad attack of mildew. "What's the matter with your plants, Sandy?" queried the visitor. "There's nothing the matter with them," said Sandy; "it's simply a case of sheer neglect." A rose grower had informed Mr. Watson that Killarney is less liable to mildew after the plants have become acclimatized here.

The club, after discussion, decided to have a smoker some time between Easter and Decoration Day.

The Moorheimi lupin was shown by E. A. Stroud; it is a pretty thing and was greatly admired. A Roper, Tewksbury, Mass., exhibited carnation Bay State in fine shape.

Trade Items.

Business continues slow, but all are looking forward to a satisfactory Easter trade. No shortage of any kind of stock is anticipated, and the general belief is that no fancy prices will be forthcoming this year, either for plants or cut flowers.

Harry Bayersdorfer reports a satisfactory demand for his Easter novelties and specialties and says business continues improving right along. This firm has now nine salesmen on the road. Mr. Bayersdorfer is gradually but surely recovering from his recent breakdown in health which necessitated his trip West. He speaks in the highest terms of the cordial reception accorded him everywhere.

Tuesday was a fine Spring-like day and the seed stores were all doing a rushing counter-business.

It is interesting to note that Henry A. Droer, Inc., is offering the much discussed hydrangea under all the names by which it has been designated—*H. arborescens grandiflora alba*, *H. a. sterilis*, and *H. a. grand. forma nova*. They say

no matter by what name it is bought the plant is a good thing.

Ponock Brothers on Chestnut street have a very attractive window display of seasonal stock. This they consider the best, and as far as they are concerned, the only form of advertising. A. B. Cartledge of the firm was over in New York on Monday last.

On Saturday last a slight blaze occurred in the basement of the Philadelphia Floral Store at 618 Chestnut street, but it fortunately was extinguished before much harm was done. M. C. Dunn, the proprietor, thinks the fire was caused by some unthinking individual throwing the remnant of a lighted cigarette or cigar through the grating into the cellar.

GRAND RAPIDS, MICH.—Articles of association have been completed for the Grand Rapids Greenhouse Company and will be filed with the county clerk. The capital stock of the company is \$500,000, of which \$200,000 is preferred stock and \$300,000 common. The officers are: President, Frank M. Strong; vice-president, Edward E. Taylor; secretary and treasurer, Frank J. Cook; manager, Samuel J. Perry. A contract has been awarded for the wood construction of the plant to Dietsch & Company, Chicago. The contract for the ventilating system has been let to the Quaker City Machine Company, Richmond, Ind., and

the hot water system of forced circulation will be used. The heating plant will cost about \$15,000 and an automatic sprinkler system will be installed. In the construction of the heating plant about 80,000 feet of 1½-inch iron pipe will be used.

The plant will be constructed in connection with Mr. Perry's greenhouses on Madison avenue, outside the city limits, and it will consist of 10 houses, each 500 feet long and 15 feet, 9 inches wide. These will be constructed side by side and will make practically one great building. It will give an additional space under glass to the different properties now held by the company of about three acres, making about eight acres in all under glass, which will be owned by the company. The total cost of the material purchased thus far will aggregate, it is said, \$30,000.

- ASPARAGUS Plumosus and Sprenger,** strong plants, 2 in. pots, \$2.25 per 100.

REVIEW OF THE MARKET

NEW YORK—The cut flower trade continues to be rather unsatisfactory, of course, the cut flower business always is in bad shape the week before Easter, but it seems very pronounced this year from the fact that business has not been what it ought to be for a long time. At the beginning of the week (Monday morning) it seemed as though there was a little more life, and clearances were fairly good, though no advance in prices was possible. The spurt, however, proved short-lived, as Tuesday was one of the duller days of the season and prices went lower even than before, and still stock could not be cleared. There is an excellent supply of roses in all varieties and the quality is superb. The same can be truthfully said of carnations and all bulbous stock. Lilies are plentiful, and there are various grades of them to be had at prices ranging anywhere from 3c. to 8c. each. Violets are better than they were one week ago, and if the weather does not get too warm they should be in fair shape for Easter trade. The supply of gardenias is being augmented every day, and there will be a good supply of long-stemmed flowers for Easter. Cattleyas are coming in quite plentifully, the variety Schroederæ being more in evidence than any other, and it can safely be said that this variety, although it is a beautiful shade of pink, does not sell nearly so well as do the deeper-colored varieties. Trailing arbutus has appeared on the market, and this Spring favorite brought as high as \$1 per dozen bunches. Of course, this is the first of the crop, and the supply is limited.

CHICAGO—Business in the cut flower market is at a very low ebb, it is doubtful whether it could be any worse. The local demand is surprisingly small, and the shipping business is considerably diminished. Though prices remain about the same they are weak, and many deals are made which would hardly show the real value of any one thing. Such a state of affairs does not augur well for Easter business, especially as there is no sign of shortage in any particular commodity. Roses are very plentiful, and of excellent quality. Carnations are still plentiful, even with a material shortening in crops. Lilies are hard to advance in price, although not so plentiful as a week ago. Outdoor grown bulbous stock is arriving in avalanches and cleans out at any price from 2c. to 10c. a bunch. Forced stock moves slowly under this condition. Liliums rubrum and candidum come in freely, but on the whole sell pretty well. Violets clean out well, but prices have a downward trend. Pansies, stocks, snapdragons and Japanese iris are seen here and there, but, like most other commodities, seem to be affected by the general depression of the market. Sweet peas continue about as good a product as anything, and are moving fairly well. J. H. P.

BOSTON.—Trade has improved from last week; buyers are calling for more flowers, and while there is practically no advance in prices there is a tendency to a firmer market all around. Roses of first class quality are seen; in fact, there never were better flowers brought into this market, especially of Richmond and Killarney, than now. Carnations are selling better, the quality is unsurpassed. Lilies are good and moving fairly well. Violets are selling well, and the first-class flowers are bringing good prices. Sweet peas are plentiful and good. Lily of the valley has a steady demand. Bulbous stock is very plentiful, but has been cleaning up daily fairly well. J. W. P.

INDIANAPOLIS.—Throughout the past week relief to the generous output of the growers came in batches of funeral work and numerous small decorations. Much bulbous stock and a number of carnations, despite this, went to waste, but the spirits of the retailer are rising above the bank of clouds so many months in the horizon. Counter trade is well taken care of with select roses, sweet peas, carnations and a great variety of other seasonal flowers. Killarney, Richmond and La France almost eligible for a rose show in quality, are wholesaling at \$8 to \$10 per 100 and retailing at \$1.50 to \$2 per dozen. American Beauty are in fine condition at \$5 to \$35 per 100. The best carnations may be had at \$1 to \$2 per 100, medium grades bring \$1.50 per 100. Much material intended

for Easter sales and fancy prices is brought reluctantly forward by the grower to a merciless and unappreciative market. Harrisii and longiflorum lilies are not plentiful, but the quality is superior to last season's; \$10 to \$12.50 per 100 is the present price. Easter orders are usually accepted at \$15 per 100 flowers or buds. Boxwood and laurel trees, also privet plants, are seen in numbers about the flower shops, but the sale is not as heavy as in the East. I. B.

ST. LOUIS.—The market the past week was not nearly so overcrowded as it has been, and the retail business showed a slight improvement; but the spurt did not last long. Next week will see the last of Lent and trade should pick up, as a good many weddings, receptions and dinner parties are booked ahead.

The weather has been extremely fine the past few days, fruit trees and early blooming shrubs are in full flower. The wholesale markets are still well supplied with everything in season, but there is not a glut by any means. Roses are selling fairly well; prices run from \$2 to \$8 per 100 for Killarney, Richmond, Ivory, Bride and Bridesmaid, Long American Beauty bring from \$2 to \$3 per dozen; medium, 75c. to \$1.50 per dozen, and shorts from \$2 to \$5 per 100. Carnations, fancy, are sold at \$3, firsts, \$2, and common, \$1 per 100. Callas bring \$8; Harrisii, \$10; Dutch hyacinths \$1; tulips, \$2; lily of the valley, \$3; sweet peas, 25c. to 50c. per 100. Von Sion narcissus, \$2 to \$3 per 100. Smilax sells well at \$12.50. There are plenty of other greens. ST. PATRICK.

BUSINESS DIFFICULTIES.

NEW YORK—Caroline E. Scallen, florist at 1242 Broadway, has filed a petition in bankruptcy with liabilities \$8,304, assets \$531. This business was started many years ago by her husband who died in February, 1903, and she has carried it on since. The bankruptcy is attributed to trade going further up town and inability to collect accounts.

YOUNGSTOWN, O.—Petition for the appointment of a receiver to wind up the business of the Calla Cut Flower Company was filed in common pleas court Tuesday of last week by Charles W. Hendricks. The plaintiff is surety on notes, now due, amounting to \$3,100, which he says the defendant company has no money to pay. The Calla Cut Flower Company is subsidiary to the Templin Company, M. B. Templin is treasurer. Judge Rogers appointed Irwin W. Coy.

The Calla Cut Flower Company was organized in 1905 and has seven greenhouses, covered with about 19,000 square feet of glass in calla. The plaintiff, Hen-

dricks, states that it is in debt to the amount of \$6,000, of which \$3,100 is now due. He says that the company has no cash on hand; that its quick assets and property of every kind are insufficient to meet its liabilities; that it cannot secure further money to carry on its business, and that the business cannot be further carried on without loss. Plaintiff therefore asked that the property be sold and the proceeds be used to pay off indebtedness. The company filed answer, acknowledging that the business could not be carried on with profit.

FIRMS WHO ARE BUILDING.

SPRINGFIELD, N. Y.—A. F. Johnson is erecting a greenhouse on his property on Pearl place.

FAIRBURY, ILL.—Kring has commenced the erection of a new greenhouse, 30x300 feet.

SAYRE, N. Y.—Arthur L. Merrill of West Lockhart plans to build three greenhouses, each 145x20 feet.

PLEASANT VIEW, IDAHO.—Myers Brothers have built and have in operation a large greenhouse at their ranch near Liberty school.

MT. STERLING, KY.—Messrs. Graser & Humphreys, proprietors of the Mt. Sterling Floral Company, have begun the erection of a greenhouse 40x75 feet.

SOUTH MANCHESTER, CONN.—Seth Leslie Cheney is preparing plans for the construction of a large greenhouse, 200 by 10 feet. Mr. Cheney has also decided to enter into field work extensively this Summer. He intends to do a large wholesale tomato and potato business. He has secured the services of Thomas L. Brown, Grand Rapids, Mich., to manage the farm.

NEW CASTLE, IND.—Weiland & Olinger, who have a large range in the northeastern part of the city, are preparing to add six big houses to the 15 already owned by them. Material is now being shipped in, and as soon as the weather will permit the work will commence. Each house will be 28x300 feet, the same size as the other 15. The six new ones will be devoted to the growing of carnations.

TOLEDO, O.—Krusger Brothers, florists, have begun making extensive improvements on twenty-six acres recently purchased out Woodville road, and will this Summer increase their capacity by one-half. They have begun building two greenhouses, 30x250 and 36x250 feet, and will erect a boiler house. The firm now has 50,000 square feet of glass at its present location at Nevada and Clark streets, and will have 25,000 square feet more upon the completion of the work this Summer. For the first year the two new greenhouses will be used exclusively for carnations.

CHANGES IN BUSINESS.

RUTLAND, VT.—F. E. Grimes has succeeded O. L. Hill in the florist business at No. 78 Plain street.

UTICA, N. Y.—Joseph Boehm, formerly with Bigelow, the florist, has opened a flower store at 62 South street.

MINOT, N. W.—Messrs. Valke & Elkman have opened a flower store here. They were formerly of Minneapolis, Minn.

DES MOINES, IA.—Alfred G. Lozier, florist, will on May 1 move into a new store at 518 Walnut street from his present quarters at 317 Sixth avenue.

MARTIN'S FERRY, W. Va.—Miss Nola Beck has opened a flower store at corner of Fourth and Hanover streets. Miss Beck learned the business in Cleveland, Ohio.

NEW LONDON, CONN.—Conrad Schultz, for many years with S. J. Reuter, has purchased a florist's business in Westerly and will conduct it in future.

FOR WAYNE, IND.—M. E. Rice has purchased a farm here and will grow gladiolus; associated with Mr. Rice will be A. E. Kunderd, Kendallville, Ind., who is an expert in gladiolus culture.

NORTH BEVERLY, MASS.—Charles Hurlbert has gone into the greenhouse business with his brother-in-law, Alexander Mitchell, at the Mitchell greenhouses on Cabot street.

HOMESTEAD, PA.—Jacob Elicker, the Eighth avenue florist, who has been in business here for the past twenty-five years, is making a change of the progressive sort in moving his establishment to larger quarters across the avenue from his present location.

ATLANTIC CITY, N. J.—H. J. Hoffmeier, Broadway, New York, opened a flower store in the Marlborough-Blenheim lobby last week. He will take care of the decorations of several hotels and will be assisted by W. F. Shean, late of the William Graham Company, Philadelphia.

GROW MUSHROOMS

If you do not know how, procure that simple but complete and practical book called "How to Grow Mushrooms." The price is ten cents and it can be secured from this office. Special rates will be made to the trade who wish to supply their customers.

THE FLORISTS' EXCHANGE
2 Duane St., New York

Introducers and growers of carnations who supply the trade with rooted cuttings will find this a very favorable time for placing an advertisement in THE FLORISTS' EXCHANGE.

Proper Size of Commercial Rose House.

*Discussion of W. H. Elliott's Paper before Rose Society.
(See Page 428, issue of March 28, 1908.)*

Asked for a description of the big house Mr. Elliott had erected, he replied, "The construction is practically in the same style as the old wooden construction used, with purlins. Every other purlin is carried above a truss and with posts under every other purlin. I have five lines of posts in the 60-foot house. We have no supports in that house larger than 1 1/4-inch pipe, and nothing smaller than 3/4-inch. The outer lines are carried with 3/4-inch, the next line or two with 1-inch and the ridge 1 1/4-inch. It seems entirely sufficient to support the roof. The construction is as light as I feel would be safe, but I do think everything is thoroughly secure.

Wallace R. Pierson: What is the ventilation? Is it double and continuous?

Mr. Elliott: There is a double row of ventilators along each side, open at the top. One half of the roof is open, three lights to the ventilator and three between. They are hinged at the bottom and open at the ridge. I have no preference for that construction. It seemed simple. It might be as well to hinge at the top and open from the bottom in the higher houses. In my new house I have a different plan from that tried before. The construction of this last house is not finished as yet. I have side ventilation there, different to what I have tried before. What the results will be I do not know. The ventilation there is about a foot, almost continuously along the front of the house to the ground, the idea being that the air coming in there will pass underneath the benches and not directly on the benches. This course may not develop as much mildew as we usually get in the Summer. There is 4 feet of glass on the front side of the house, and the ventilation is below that. The sides are of wood, but there is not much wood except the frame work for the ventilators below the glass. I think the ventilators are perhaps 15 inches wide.

A. Farenwald: I am interested in Mr. Elliott's remarks regarding the growing properties of these houses. He says you can grow a better article in the large than in the small houses. I must differ from him, it depends upon who is the grower. If he is a

successful man it doesn't matter what kind of house he has. In my opinion the difference between a large and small house is merely a matter of economy which goes with the large house. First, it is cheaper to build a large house than several small houses; but then there is the heating. You take a house 800 feet one way and heat it by gravity. You have to force your steam a long way from your boilers, so that if you are close to your house it makes practically 1000-foot run before you distribute, making a lot of friction. If you want to run on low pressure you must use a very large steam pipe. This causes a great loss of energy. With me it is a question whether such large houses are profitable, and particularly so as to their heating.

Mr. Elliott: Like most of our ideas about these things we are always making the best guesses we can. When we construct houses a certain way we are satisfied they heat first-rate. I circulate my steam with a gravity system covering half a mile, and there has been no difficulty at all on that account. The end section of the house heats a little better than the rest. The original plan of the house was to divide it into sections 200 feet long, a man to each section, but the end section instead of being 200 feet, is only 175 feet, and as they get nearer to the boiler the sections are longer. We have shortened the end to such an extent that it heats the best. It does not seem to me there is any very serious drawback. I carry the steam through that half mile run with a 6-inch pipe, placed underneath the ground. What the friction might really mean I do not know, but the loss of heat cannot be very much, because all the heat radiated is radiated into the greenhouse. I cannot understand that the earth will absorb the heat and draw it away. Now, there is another important point about the heating of these large houses which for many years I could not understand. I have an idea about it now which I think is correct. I found it did not require so many pipes nor so much heat to heat the high houses as it did to heat the low ones. That seemed to be quite contrary to what we really knew about heating. We always supposed the large spaces required the most heat, but the idea which occurred to me was this: If you place your pipes down where your

plants are and your glass is as high as the ceiling in this Auditorium the cold is not going to affect those plants on the ground very easily. If I sit in a chair just here and seek to get warm I shall succeed better than if I sit close to a window, and I can keep warmer the farther I am from the glass. In these high houses the variation in temperature between the location of the plants and the highest portion of the roof would be perhaps 10 per cent. You have a great blanket of air between those plants and the glass. That is no drawback, it is really a benefit; and we find it practical in heating that a smaller amount of pipe will keep the big houses warm. It is against scientific dogma to have hot air on the bottom in greenhouses and the cold air on top. The hot air will rise, but not so fast as it cools off on top, and it will not do it very quickly. For that reason I have considered it cheaper to heat the high houses than the low ones.

In regard to the improvement of stock grown in the high houses, I can grow better stock in my large houses, and I presume this would be equally true of the other man. I do not think I could develop such roses as I do in the large houses in the old style houses. I think Mr. Poehlmann has some ideas contrary to mine on that point.

August Poehlmann: My ideas coincide with Mr. Elliott's as to large houses. We used to have small houses and found it hard to regulate the temperature. Since we have built several large houses with 10-foot gutters we can see they are easier to heat than the lower structures. I believe the great quantity of good air you have in the large house helps out the grower.

Mr. Farenwald: Then there is the wind pressure on the large houses. This Winter at the large house at North Wales, Pa., several severe windstorms have been experienced. The house is 150 feet or more wide, with an angle, I believe, of something like 175 feet. It is not square on one side. A friend of mine made it a point to visit the house during perhaps the heaviest storm. He found the men in charge afraid to remain in the house that day; although he himself ventured in, he did not stay long. He declares he never saw anything like it and never experienced such a sensation. The house is

not built in the regular way; but they have the pipe all overhead and the ties anchored by that. If not anchored by all these tons of pipe that house would have blown away in that storm. The pipes were running into a 6-inch return at one end. This return was lifted clear from the ground 6 or 8 inches by the velocity of the wind. It was a long way from the boiler and could give a little. Now you can imagine the enormous pressure against that house, and as fast as they put glass in it blew out again. Finally, they had to use logs of wood and big ladders to brace the sides. As originally braced I thought nothing but a cyclone could hudge that house. I do not want any house like that.

Mr. Elliott: I think Mr. Farenwald is a little mistaken if he supposes I am undertaking to defend the construction of a greenhouse such as that. I have never suggested in anyway the building of a house like the one he mentions. If such a house is wanted it should be constructed so that it will stand. When I was there last Summer the American Beauty roses I saw were as good as any I saw anywhere; and there are in this exhibition some flowers from that house as good as any exhibited. If the stock grows, as it apparently does, do we want that kind of house? The movement of a large body as contained in these large houses is a serious question. You cannot put up a house 150 feet wide and 30 to 40 feet high and expect a pressure on the lights similar to that in a small house. A body of air when it takes a move against a big expanse of glass presents a difficulty hard to overcome. It means thorough construction and thorough glazing. But I believe in the large houses. I am not prepared to say I believe in any house 150 feet wide, but it is up to us to decide how far to go. In the next 25 years we may go even wider than that. There are perhaps some serious problems in the large houses which will solve themselves. We always had an idea stock would grow better near the glass. If a gardener wanted to give anything a favorable location he would stick it near the glass. It is true, and it is not true, that that location is best. The higher level in the greenhouse will do better than one down low. You suppose that is because it is near the glass. It is not altogether true. It is because it is higher than the other stock and the cold air and drafts all strike the lower level. But

with a higher house, of a construction proper, and plants laid out on the level, there are no plants higher than any of the rest. Then we supposed the high roof would make the plant beds cold. But I find that the glass roof itself is not intercepting the heat rays from the sun. It is the ground, and the heat is at the ground. It is a fact that in these large houses the sunshine comes in and warms your plants right down at the ground. It was a question to me whether the plants would warm up at the bottom, and I found they did, and well.

Now in regard to ventilation. It always seemed to me very important that the ventilators should be opened up a good deal. I do not know whether that is true or not. I think if the house is large enough so that you do not have to open any ventilators at all you could grow pretty good stock. I do not see what there is to contaminate the air in a greenhouse. These questions solve themselves, it seems, all in favor of the large houses.

Wallace R. Pierson: Do you consider that the stem is lengthened by the greater distance from the glass?

Mr. Elliott: I have not been impressed with that idea. I would say that with a good light roof and with plants all on one level there does not seem to be a tendency to "draw" them up. There may be some tendency to lengthen stems, but not much.

Mr. Farenwald: Regarding the ventilation in the large house I have been speaking of, there is a double ventilator 4 feet each side of the house, and during the Summer, the house got too hot with these ventilators wide open, in fact, the men were not able to work in certain hours. The house heats up splendidly and in the Winter time it is quite an advantage. Less artificial heat is required than in any house I ever saw. It is remarkable. The plants are thrifty and look well; no overdrawn stock. There is something in these big structures, but we have to do a lot of thinking yet.

MILES OF FLOWERS.—The floral department of the Canadian Pacific Railroad is sending 50,000 packages of flower seeds to trainmen and section men along its 3,000 miles of trackage. This is an advance on the practice of other roads in growing flowers at their stations, and has resulted in hundreds of pretty home gardens along the line.

CLUB AND SOCIETY DOINGS

DUTCHESS COUNTY (N. Y.) HORTICULTURAL SOCIETY.—The regular meeting of this society was held at Poughkeepsie, N. Y., March 25, 1908. The society was entertained with a very interesting paper on carnations by F. E. Witney, Fishkill, N. Y., who fully covered the entire subject. A fine vase of carnations was exhibited by A. Lamb & Son, Hughsonville, N. Y., for which the society tendered him a vote of thanks.

In the evening an interesting and instructive lecture on "Tree Doctoring" was delivered by John T. Withers at Vassar Institute, to which the public was invited.

Two new members were elected, making an active membership of 271.
HUBERT G. COLLAM.

NEW JERSEY HORTICULTURAL SOCIETY.—Additional attractions were brought to the display of the season's flowers at their meeting on the third instant by a cash prize of \$10, offered by W. A. Manda last month and divided into three premiums by the committee. The awards were: First, William Reid, gardener for Sydney and Austin Colgate, Orange, for a specimen anthurium of large size and finished cultivation; second, Popkin & Collins, for a standard white lilac; third, John Derwin, gardener for A. C. Van Gansbeck, for a specimen Cineraria stella, three feet high. Lager & Hurrell, Summit, exhibited a table of orchids; Thomas Jones, Short Hills, hyacinths in pots; Max Schneider, gardener for Charles Hathaway, East Orange, stocks; John Derwin, vases of roses, carnations, anthurium and sweet peas.

Henry Hurrell gave an interesting account of the formation of the new orchid society, and resolutions were unanimously passed wishing success and prosperity to the undertaking. George Johnston was elected to membership.
J. B. D.

The New York Agricultural Station at Geneva is studying the carnation disease called bud rot. The investigations will, it is said, throw considerable new light on one form of this trouble, and the results of the studies will appear in bulletin form soon.

In its colored supplement for March 28, 1908, London Garden pictures carnations: Rose Perfection, Princess, Aristocrat and White Perfection.

Editor Florists' Exchange:

I see Job is on the rampage again. I suppose he has been hibernating with the ground hog or ruminating on the "education" he received from Boston some months ago. His long rest has been quite a relief to the readers of The Florists' Exchange; but neither rest nor education seems to have worked much improvement on Job. Old age and mental decrepitude appear to be getting the best of him; already he is a "back number." As a humorist he is plainly a failure; his "trenchant" pen has lost its point; phrases he evidently wants to palm off as satire fall flat and are meaningless except to himself. Some of them savor of Billingsgate; I had almost said "the muckrake."

The word "muckrake" reminds me that I heard a muckrake response to a toast at a club dinner on February 29 last; and I just want to say in passing, that while the anonymous scribble has very little to recommend it, the muckrake response to a toast is despicable and detestable, and when supplemented with an infliction of doggerel becomes disgusting. It is to be hoped that that dinner was strictly kosher. But that is another story. Back to Washington.

Job wants to know "where I was at the time the photograph was taken." This is none of Job's business, but I will tell him. While those gentlemen who were laboring under the hallucination that they were something to look at were getting their photos taken, I was taking in the sights of Washington, and among the rest the carnation houses of the Department of Agriculture, which I found in grand shape. On the seedling bench I detected several good ones, two especially, one pink and one white, which in the hands of any of our promoters or specialists would be made good use of; but, of course, the plants being raised at the expense of the Government will be disseminated something in the same manner as the free seeds; no speculator will get hold of them.

With your permission, Mr. Editor, I will give Job a synopsis of that Washington trip. Of course, the Washington carnation convention is now ancient history, but considering the fact that I did not go there as a "sage," merely as a commercial grower looking for something new, or comparatively new, to take the place of some I want to discard, my experience may be worth recording.

On entering the convention hall the first thing noticeable was a cloud of tobacco smoke, and through the smoke

could be discerned a low-roofed hall, well filled with grand carnations; and the carnations were really grand the first night. There was much comment about the smoke, many predicting that it would have the effect of putting the flowers to sleep. This did not prove to be the case, however, for although a great many flowers were asleep next morning, others looked as good as when they were first staged, which would indicate that the smoke had nothing whatever to do with it. What was the cause? Did they all go to sleep from one cause, or was there a different cause for each vase?

One thing I noticed was some varieties of carnations which have the reputation of being short-stemmed, exhibited there with quite passable stems, and on lifting them out of the vase, just to "see," I found that they had been cut off right at the trunk of the plant. I don't think this should be allowed at a trade exhibition. The commercial grower has necessarily got to leave two (some leave three) good shoots for a succession of crop; the commercial carnation, therefore, is the flower and that part of the stem above the above-mentioned shoots. A carnation for a trade exhibition should be cut exactly in the same way as it is cut for market purposes; any other way is misleading. This is another argument in favor of the visiting committee. Anyway, I selected two or three varieties which from their behavior on the exhibition table (which was all I had to go by) give promise of being good commercial varieties. So much for the carnation show, but some side shows were even more enjoyable.

I had the pleasure of spending some pleasant and to me profitable hours at the home of W. R. Smith, superintendent of the Botanic Garden at Washington, ex-president of the S. A. F. O. H., and the proud owner of the most complete Burnsiana in the world. Mr. Smith informed me that after diligent personal investigation and inquiry he was thoroughly convinced that Burns was not a habitual drinker, or inebriate, as is the general belief; but on the contrary, was a very temperate man, and that his bacchanalian songs merely describe what he saw in others who had tarried long at the cup, and not from personal experience. He also contends that Burns was endowed with extremely high morals, and that such poems as "The Cottar's Saturday Night," "Mary in Heaven," and "Holy Willie's Prayer," give ample proof that he is justified in so thinking.

Among the notables I met for the first time was W. N. Rudd of Chicago; not W. N. Rudd as we see him portrayed from time to time in the trade papers—juvenile, unsophisticated, and innocent looking, but W. N.

Rudd as he really is, bearded and grizzled muzzled, his "crown of glory" very much in evidence. He is or should be old enough to know better. I suppose it is vanity! When I first saw him he was in the act of unpacking some new carnations which had been delayed in transit and had been in the box for 56 hours; they, however, came out in perfect condition, which proves that they are good shippers, and judging from what I saw of them they will be heard of later. Wishing to know Mr. Rudd I asked a mutual friend to introduce me. This he did in the usual manner. Mr. Rudd took my proffered hand, but disdaining all the stereotyped and conventional phrases generally used on such occasions, scrutinized me closely, and sternly demanded, "Where's your horns?" Before I could formulate an answer to this disconcerting question someone else claimed his attention and all he had a chance to say was "like to see you later." We met "later," when he was at leisure, and I found him good company and a very interesting talker. The subject of "horns" was not touched upon, but I don't think he would know an angel if he saw one.

It may interest Job to know that I endeavored to shake hands with the President of the United States. As I moved along in line I made up my mind that I would give him a fraternal grip, but when I closed my hand I found that his hand wasn't there, and on looking over my shoulder after I had passed to at least have a look at his physog, all I saw was a hole with what resembled a picket fence around it in the place where his physog ought to have been.

In closing, I wish to remark that Job seems to know all that is necessary about the "hairs of the dogs" and their efficacy the morning after the night before; but I don't see how that experience could be acquired from a milk and seltzer thirst. Regarding human bones for fertilizers, I remember as a boy, some years after the Crimean War, seeing whole cargoes of bones, both horse and human, being brought from the trenches in the Crimea to Fraserburgh in Scotland and ground into commercial "bones." I never heard that their use caused any commotion either above ground or below. The only thing that puzzles me is how those atoms are to find their proper place when Gabriel blows his horn.

I would like to say quite some more on several subjects, but I got a letter from the Eastern representative of a Western paper, together with the names of 23 members of our local club; he has requested me to try to induce those 23 to subscribe for the paper he represents, and I suppose out of charity I will have to try my hand at book canvassing.

News Items.

After repeated efforts, without success, on the part of the directorate of the Southern California Horticultural Society to secure enough votes at any one of the several meetings held since January 1 to legally elect a new board for this year, it was decided at the last meeting, held at Payne's seed store, to make no further attempt until the first Wednesday of 1909.

The store of the Redondo Floral Company on Spring street, operated in the past years in connection with their glass and slat houses and carnation grounds at Redondo, has been bought by Charles E. Morton, recently arrived from Chicago, where for a number of years he conducted a flower store. Hereafter this flower shop will be run independently of the beach establishment.

The Signal Hill Floral Company has opened a store at 206 West Fourth street to meet the demands of its rapidly growing trade. Jack D'Ortignac is manager. His artistic skill is of a very high order, and with the great quantity of flowers this company produces the store should be a success.

The Los Angeles Florists' Club, with thirty-two charter members, is now a permanent organization. O. C. Saakes, florist, 140 South Spring street, is president; G. S. Dunscomb of Rising-Dunscomb Company, nurserymen, secretary.

B. Suzuki, managing director of the Yokohama Nursery Company, on a recent visit to this coast appointed Jacob Dietrik sole agent for the sale of the concern's stock on this coast from San Diego to Santa Barbara.

The price of Phoenix canariensis seed advertised in your columns is so high that it arrested my attention when reading the advertisement. Here thousands of pounds of these seeds are annually consigned to the brush pile; they are the cause of a good deal of profanity and hard work in keeping lawns free from the seedlings underneath the parent trees.

P. D. B.

Baltimore.

News Notes.

The present balmy Spring weather is beginning to force vegetation to a considerable extent. Ventilators are wide open. Lilies, roses, carnations and even bulbous stock (anything under glass) are fast going to pieces before Easter week has arrived.

The Gardeners' Club held a well attended meeting last week. The question of home-grown seedling lilies was brought up, and F. C. Bauer and other successful growers spoke on the subject. Mr. Wm. Lanahan, through his gardener, J. Kepplinger, extended an invitation to the club to visit his beautiful estate, "Blenheim." The date will be the last Wednesday in May; a good time is assured.

The Gardeners' Club at its recent meeting adopted resolutions of respect to the memory of Professor Willis G. Johnson who died in New York City on March 11. Professor Johnson was formerly the State entomologist of Maryland, and was much esteemed and very popular among the florists and horticulturists.

Another link has been added to the chain of parks purchased in the last year or so by the Park Board. The latest acquisition is known as Evelyn Park, a beautiful tract of land bordering on Herring run and Harford road. This property will be connected with the other parks of the city by a boulevard traversing Herring run front.

The Johns Hopkins University proposes to establish an arboretum on its new grounds, "Homewood Park." A conservatory and greenhouse will be erected which will house medicinal, economic and other plants. There is sufficient room at "Homewood" to make a model botanic garden for instruction of the students; soil conditions, etc., are highly favorable.

C. L. S.

MIDDLETOWN, CONN.—The overturning of a lamp in the office of F. B. Fountain, the florist, started a blaze which did considerable damage to the floor and the woodwork.

Kalamazoo, Mich.

Trade Notes.

Changes reported in the volume of business are of a more cheerful nature. While prices are no higher supplies are being more closely used up and special clearance sales are not in evidence. The cuts of carnations and bulbous flowers are becoming much lighter and it looks just now something like a scarcity of carnations for Easter. Still there is an abundance of pot plants, roses and bulbs of all kinds all around, so there will be no lack of stock to meet all demands not only at Easter, but all through the balance of the season.

With the possible exception of carnations, I don't look for any very high prices to prevail. Lilies will be abundant and of good quality. Van Bochove has a house of them timed finely for the Easter trade; also nice batches of cinerarias, tulips, daffodils, etc., as well as the usual run of stock for the pot plant trade. The firm is now drafting plans for the removal of the Third street greenhouses to the Rose Hill plant and erecting likewise offices, storage rooms, salesroom, etc. When completed there will be some 150,000 feet of modern greenhouse construction. Mr. Van Bochove says the business has shown continual advance in spite of the general depression this season.

F. Meyers (The Riverside greenhouses) has sold the place to a gentleman from Pennsylvania, who will, however, not take possession till June next. Mr. Meyers' plans for the future are at present undecided.

S. B.

LONDON, ONT.—Since last writing business has picked up in good shape; small plants are moving actively at wholesale and trade is brisk at retail.

J. H. Taylor has bought out the store known as the Canada Floral Company.

Gammage & Sons have opened a store in Chatham, Ont., and one in Petrolia, Ont.; they intend, if it pays, to run a series of retail stores in the near future.

Stands by the Mistletoe.

An amendment to the Agricultural Appropriation bill offered by Mr. Burleson of Texas, providing means for exterminating the mistletoe as a parasite harmful to trees, provoked much heated discussion in the House on Monday, March 30.

No sooner had the unromantic amendment been read than a storm of protest arose.

"I should like to ask if the gentleman is single?" put in Mr. Douglas.

"And I should like to know," said Mr. Olmsted, "whether the gentleman means this cruel measure to go into effect in leap year?"

"And does the gentleman value the forests of the future more than the poetic associations of the past?" asked John Wesley Gaines.

Mr. Burleson tried to explain the necessities of the case, but Mr. Gaines had started on the subject of sentiment and could not be stopped.

"I call up to your memory," he said, "all the glowing thoughts that ever came to you under the mistletoe. I call upon the gentleman who has just left the chair, Mr. Nicholas Longworth, to tell you his experiences, and I call upon the whole House to remember similar experiences and vote down this amendment."

The amendment was killed amid shouts of laughter. — N. Y. Times.

DAVENPORT, IA.—The Tri-City florists were out in numbers Thursday evening, March 19, the occasion being the second annual banquet of the association, which was held at the Rock Island Turner hall. All the florists of the three cities were present with one exception and that was on account of sickness. The company was a merry one, and they were short talks by each member. If Kelm of Chicago was the out-of-town guest, and he gave some of his experiences in the business. The members of the Rock Island Turners' Singing section entertained the florists with some very good musical numbers, and Theo. Ewald of Davenport also contributed several vocal solos. The toastmaster of the evening was William Kneib, president of the Tri-City Florists' association.

News Notes.

There was quite a delegation of traveling salesmen from the Quaker City here the past week calling on the trade. They were Martin Reukant of H. Bayersdorfer & Company, E. J. Fancourt of S. S. Pennock-Meehan Company, J. J. Karins of H. A. Droer, Inc., and S. S. Skidelsky. All reported a good business trip.

Mrs. William Ellison of the Ellison Floral Company has returned from Chicago, where she went to visit her son Arthur, who is at Vaughan's Greenhouses at Western Springs, Ill. She also made arrangements for stock for her Easter trade.

April 10 is set aside for Arbor Day by the Forestry Committee of the St. Louis Federation of Women's Clubs. The committee has sent out 1,000 programs to the public schools. All the children are to plant trees on that day and Governor Folk is down for a speech on "Nature Creed."

The Engelmann Botanical Club held its regular monthly meeting on Monday night in the Central High School Building. President Thompson presided, and Dr. W. J. King read a paper on "Perfume and Perfume Plants." The doctor also exhibited plants from which the perfume is extracted. There was a large attendance.

Among the local greenhouse men who are well supplied with extra fine plants for the Easter trade are Charles Beyer, C. C. Sanders, G. B. Windler, William Schray & Sons, Henry Felzer and J. W. Dumbord.

Al Shaw's Garden Magnolia Soulangiana is in full bloom. The flowers were badly nipped by the heavy frost on Thursday of the past week; fruit trees were also badly damaged. Tulips and hyacinths are now in full bloom in nearly all the public parks.

The florists west of Grand avenue are making fine displays of blooming plants; they have the advantage of having show houses. Among them are Fred C. Weber, J. P. Windt, Kalish & Sons and F. H. Weber. Plant trade is reported good.

The Grand Leader, one of our largest department stores, has a plant department in charge of Frank Burkhardt, who

was formerly in the retail business here. The house advertises special sales every day and reports a rushing business.

Chairman Charles Schoenle of the Florists' Club's trustees will call a meeting of the trustees this week and start the ball rolling for an early outing of the florists. Carl Beyer and W. C. Smith are the other trustees. They say they will spring some new features this year, but the usual ball game between the wholesalers and retailers will again be the feature of the outing. Arrangements will be reported at the next club meeting.

St. PATRICK.

Detroit.

News Notes.

Business conditions were the same last week as the previous one, when plenty of flowers and plenty of time were at everybody's hand to do a great deal more work.

George Heinal and F. McGee from Toledo were here last week.

M. Bloy, formerly of Reinberg & Weil and, New Castle, Ind., was introduced to the boys by George Raackman, whose greenhouses and grounds Mr. Bloy has recently bought. A hearty welcome and best of luck to him.

Wm. B. Brown, the hustling Woodward avenue florist, made good use of the present dullness in business by repainting and cleaning his already attractive little store.

Florists' Club.

The members turned out in full force at the last meeting, being especially attracted by the promised exhibition of Easter plants. Robert M. Rahaley and Albert Sylvester did fine work in the staging of all the plants sent in. F. Miesel & Sons brought a tub of assorted snapdragon and well-done pot plants of American Beauty, hydrangeas, Pringla oleonica, Baby Rambler, pink and white spiraeas, forget-me-not, and heliotrope. Charles Plum's exhibit comprised mostly potted tulips, daffodils, hyacinths, lilies, roses, and also vases of Mrs. Lawson and Enchantress carnations.

John B. Dionser exhibited lilies, spiraeas and very good ferns in pots. Beard Brothers showed nice ferns in pans, besides potted tulips, hyacinths, daffodils,

spiraeas and azaleas. Gus. H. Taepke filled a large table with exquisite Baby Rambler and hybrid roses in pots, also very good pink spiraeas, azaleas, rhododendrons, metrosideros, snowballs, etc. James Taylor, Mt. Clemens, sent down the best two vases of snapdragon. John Breitmeyer's Sons exhibited elegant pink and white spiraeas, hydrangeas, lilies, Rambler roses, and azaleas. Robert Klage, Mt. Clemens, sent a full line of bulbous flowers, very good callas, lily of the valley and exquisite Kaiserin Augusta Victoria and La Detroit roses. This firm promises 50,000 violets to the Michigan Cut Flower Exchange for Easter. Fred Kolbe had on exhibition by far the best Mrs. Lawson, White Lawson and three varieties of Enchantress. A great attraction was the exhibit of the Department of Parks and Boulevards, especially a fine collection of calceolarias, hydrangeas, cyclamen, bleeding heart, genistas, and the black calla.

The evening was enjoyed by all, made still more instructive by Philip Breitmeyer, who spoke of his recent Southern trip. George E. Brown's recitation of his poem "The Echo" brought forth much applause.

A check forger named George R. Muckey, from Denver, Col., who is now in custody, victimized some of our local florists before he was finally landed in the toils by Hugo Schroeter.

F. D.

Toronto, Ont.

Business has been rather flat during the last week, and prices of cut stock have fallen severely. Carnations are as low as I have ever seen them; even really good stock has been offered at any old price. Bulbous stock and violets have also been very low.

The meeting of the executive committee of the C. H. A. at Niagara Falls was a good one, and there is no doubt the convention of this year will be a banner one for the members. All feel that the intercourse with our brethren on the border will be beneficial to those who attend. The C. H. A. decided not to have a trade exhibit this year but to advise members who have anything of interest to put up, to show it at the exhibit of the S. A. F. O. H. on the other side of the river.

The Ontario Exhibition Association had an organization meeting on the 27th ult., and decided to hold the show this Fall in the St. Lawrence Arena, if possible. Mr. Bunting of St. Catherine's was elected president and Mr. Percy Hodggett secretary. Mr. C. M. Cowan, who has been secretary since the start, had to give up the office, having removed to Peterborough. The members passed a resolution, thanking him for what he has done to put the show in the position it is in. It was decided to ask the Ontario Government to incorporate the association.

The Toronto Horticultural Society has taken a decided step in advance this Spring in getting the owners of some of the best local greenhouses to throw them open to the members occasionally; Saturday afternoon has been the time chosen so far. They first visited the Steele Briggs place and were so interested by what they saw in commercial plants and stock for Spring trade that when Dunlop's place was opened to them they went there in larger numbers. Here again they were much interested, the stock of plants being grown for cut flowers astounding many of them. Last Saturday they were invited to the greenhouses of Sir Henry Pellatt; this is the first private place they have visited and here they were splendidly entertained. Sir Henry and Lady Pellatt met the visitors and personally made them welcome. The greenhouses are in fine order and a great credit to the gardener, Tom McVittie. The orchids are growing well, but there are not many in bloom just now. Crotons and other choice foliage plants are very fine; the amaryllis and gloxinias were exceptionally good. A nice collection of auriculas was much admired, and many of the visitors were interested in the show of cucumbers and tomatoes grown in one of the houses. The houses are all filled up and there did not appear to be a poor plant in any of them. Sir Henry provided a plentiful supply of high-class refreshments to the members, who all agreed they had spent a pleasant and profitable afternoon. These meetings will certainly do much good in furthering the knowledge of high-class floriculture among our citizens.

57 WEST 28th STREET, NEW YORK

P. Welch on His Chicago Trip.

The following conversation took place one day recently between your Boston representative and P. Welch, the well-known wholesale florist of Boston, Mass., who had just returned from attending the American Rose Society's convention in Chicago:

"How did the flower show compare with what we have seen in the East?"

"They certainly put up an excellent exhibition, lacking only the fine exhibits of Rambler roses, such as we have seen M. H. Walsh stage here in Boston, or at the Washington meeting."

"How did the Chicago retail stores impress you?"

"They are made to look attractive, and while the average store is not so large as those in New York or Boston there are a few very large ones. I think they carry a more extensive stock of goods and display them in the windows and other parts of the store, seldom keeping their stock in the icebox as is done in the Eastern cities. It is a common thing to see a sign announcing special sales of certain flowers, at so much per dozen, when most of them could easily fill an order for several thousands of the same flowers. They carry an equally large stock of all kinds of flowers."

"What about the wholesalers?"

"There certainly is a large number of wholesale houses in Chicago, all in close proximity, or at least within a radius of ten blocks. They can be divided into three classes. First, those who confine themselves absolutely to the sale of their own products; second, those who sell their own products and consignments from other growers; third, those who are engaged in selling on commission only. Most of their stores are either in basements or the second story of buildings; few, if any, are on the ground floor. In looking over these wholesale places the idea occurred to me, what a fine thing it would be if all the interests would consolidate, and hire or erect a building and the different wholesale houses lease rooms in said building. It would seem as if the cost of attending to the sale of goods and rents could be reduced quite considerably."

"Did there seem to be much business going on?"

"Well, they seemed to be all making sales, but at no time could I discern any rush, either for shipping or for city trade."

"Do you think they get any better prices than they do at wholesale here in Boston?"

"I have no means of knowing what the general average for any commercial flowers through the month or year would be, but judging from the figures goods were offered at the week I was there, our market seems somewhat stronger and able to secure higher values."

"What did you see among the growers?"

"I did not have an opportunity to visit many of them, but I think it goes without saying that Poehlmann Brothers Company's establishment is one of the largest and most complete in the country, with machinery for pumping water, running dynamos for making electricity and running a cold storage plant, besides a spare track running into the sheds from the main railroad track. Nothing seems to be overlooked in this

E. H. HUNT, Chicago.
WM. F. KASTING CO.,
Buffalo.
Scranton Florist Supply Co.,
Scranton, Pa.

Or direct of **GEO. B. HART, MANUFACTURER, 24 Stone St., Rochester, N. Y.**

Kansas City, Mo., March 31, 1908.

Dear Sir

Kindly ship us by freight at once, 25 14-in., 50 1-in. and 25 24-in. Handles. Kindly ship these at once in order that we can have them before Easter.

Very truly yours,

WM. L. ROCK FLOWER CO.
Per Wm. L. Rock.

respect. The houses are all built on the ridge and furrow plan with a center walk, from which on either side runs bench after bench (there are no solid beds), of American Beauty, Bride, Bridesmaid, Killarney, Richmond, and many of the newer varieties, all growing and flowering in the most prolific manner."

"They grow lots of carnations there, too, do they not?"

"Yes; what to my mind was the most beautiful sight, was to look over the benches of carnations, some 180,000 plants, all a mass of flowers of a very high grade. At Peter Reinberg's, the only other grower I had time to visit, everything looked well. This also is a very large establishment. The Chicagoans did everything in their power to make the convention a success, and the comforts of all visitors were well looked after."

J. W. DUNCAN.

ATLANTIC CITY, N. J. Louis Nagy, florist at 1501 Pacific avenue, was found unconscious in a gas-filled room in rear of his store on the morning of April 1, and is believed to have attempted suicide. There are grave doubts of his recovery.

New Orleans.

News Notes.

The crops of lilies grown under glass in the vicinity of this city this year are nearly all too far advanced for Easter; in fact, great numbers of them are already open. It has been found impossible to keep them back on account of the unprecedented hot weather prevailing for so early in the season. From present indications the outdoor crop will be just about in.

Two vines that are very much planted here are Bignonias Tweediana and laurifolia, and at the time of writing they are covered with their beautiful flowers. Tweediana often takes full possession of a tree, or climbs to the top of a lofty building, and for a few weeks in the Spring it is literally a shower of gold. Laurifolia, not as rampant a grower as its mate, is generally trained on a trellis or in front of the verandas, and produces its delicate lavender colored flowers profusely. Another showy plant in bloom at the present time is Amaryllis Johnsoni; these are to be found in enormous numbers in New Orleans gardens, planted in masses and rows. The effect while they last is gorgeous. CINCINNATI.

Cincinnati.

News Notes.

Ben George of this city was the victim of a swindler last week, who practiced the old game of ordering flowers for an alleged customer and then appropriating the goods. The scamp has been arrested.

J. McKeeory, representing Bayersdorfer & Company, Philadelphia, was in the city April 2.

The past week has shown some improvement, stock having shorted quite a little.

We are not at all in love with the Greeks for a steady diet, and they are certainly the limit. Three carnations with ferns are sold on the street for 5c., and the same applies to American Beauty.

The outlook for Easter appears good to me. I think we shall have a fair supply of stock and that good prices will prevail.

E. J. Fancourt of the Penneck Meehan Company of Philadelphia is in the city in the interest of his firm. E. G. G.

ANN ARBOR, MICH. G. Bissel, florist, was recently the victim of a check forger to the tune of \$1850.00. flowers, \$12, and \$6.50 in change.

1887 **EASTER GREETING** 1908

FROM
J. K. ALLEN

The best wishes extended to all the trade.

PLACE your orders for cut flowers with me. They will be given special attention. I handle only for the best growers, **ROSES, CARNATIONS** and **VIOLETS**, with all other varieties of flowers too numerous to mention.

New York.

News Notes.

The next meeting of the New York Florists' Club will be held on Monday evening, April 13, in the Grand Opera House Building, northwest corner of Twenty-third street and Eighth avenue. Without a doubt the majority of the club's members will be glad to again assemble in this favorite meeting place, and it is expected that there will be a large attendance. Secretary John Young informs us that there will be an extensive exhibit of roses, many new and interesting ones among them.

Next week will be Easter, one of the banner seasons of the year for the florist's business, and it is to be hoped that the trade will take on a spurt, so that everything marketable can be sold at profitable prices and help to redeem somewhat the rather poor business that has been the rule throughout the winter. It can safely be said that in cut flowers and plants this market offers a line of stock to the out-of-town florist such as can be obtained in no other city. To the florist seeking cut flowers or plants for next week, we would advise him to consult the advertisements carried in this issue covering this section. The best of the trade is here represented, and it goes without saying that orders placed with any of them will be carefully executed, and the customer may rest assured that he will get a square deal.

The Brooklyn Daily Eagle for some time past has been reviewing and writing up the industries of that part of Greater New York, and Saturday the subject was "Florists and Seedsmen." The paper devoted several pages to views of various florist establishments in and around Brooklyn, and also secured a fairly liberal line of advertising from the different firms mentioned in its columns. Among the portraits illustrated was one of Major Wm. P. Stead, who is a florist and landscape gardener at Ozone Park, and a survivor of those who escaped from Libby Prison in 1864. It would seem to us that this effort on

the part of the Brooklyn Eagle is a very commendable one, giving prominence to the florist trade, and must do a great deal of good to the business in general.

A meeting of the directors of the Cut Flower Exchange was held in the offices at Twenty-sixth street and Sixth avenue on Saturday morning, April 4.

Chas. E. Robinson, florist at Peekskill, N. Y., has moved from 806 South street to 966 Main street.

Mr. and Mrs. Alex. B. Scott of Sharon Hill, Pa., sailed from New York on Saturday, April 4, on the steamship Caledonia for Europe. They will go to Newtownards, Ireland, to visit the Dickson Nurseries, and while there Mr. Scott will give testimony in the trial that is going on with respect to the alleged infringement by another firm of the Dickson & Sons firm name. W. Atlee Burpee of Philadelphia was in town to see Mr. and Mrs. Scott on board, and referring to the demise of Mr. E. D. Darlington, so long in the services of his company, Mr. Burpee says the death of Mr. Darlington was the greatest shock he had received since the loss of his mother.

Frank S. Hicks & Company of 52 West Twenty-eighth street will, in the near future, move to the parlor floor of 39 West Twenty-eighth street, which is directly above the store occupied by Walter E. Sheridan.

Samples of lily plants are already seen around the city, and the asking price for Easter for good stock seems to prevail at 12c. per bud or bloom.

The early morning market, which holds forth every Spring at the corner of Canal and Washington streets, was started a few days ago in the open air. The tent will be erected within a few days. So far business has been fairly good, stock clearing out at the usual market prices.

Among visitors in town this week was Peter Crowe, Utica, N. Y., making his annual Spring visit.

The members of the New York Florists' Bowling Club are showing a great deal of enthusiasm over the transportation prizes offered by President F. H. Traendly and there is a good attendance every Friday night. In addition to the Traendly prizes, the president of the bowling club, W. E. Marshall, offers a box of cigars and a pruning knife to those

who make the highest average during the month of April. The scores made on Friday evening, April 3, were as under:

W. E. Marshall.....	154	164	131
N. Schreiner.....	121	111	146
F. H. Traendly.....	154	142	144
P. O'Mara.....	139	105	
Jos. S. Fenrich.....	156	194	144
Jos. A. Manda.....	157	164	162
John Young.....	129	109	104
Chas. H. Totty.....		123	146
A. S. Burns.....		105	100
R. Schultz.....			77

Utica, N. Y.

News Items.

On Thursday evening, April 2, Dr. W. A. Rowlands entertained the Utica florists at his greenhouses at Whitesboro. The feature of the occasion was a winter clam bake, which was regarded as a novelty and proved in every way as enjoyable as a summer bake. The bill of fare consisted of oysters, clams, chicken, sausage, potatoes, lobster, clam chowder, coffee, etc. The tables were arranged in the large shed adjoining the greenhouses which had been decorated for the evening. An orchestra played a fine selection of music and the company, which sat down at 9 p. m., did not separate until the near approach of the "wee sma' hour." A. J. Watkins read a very able and interesting paper on "Carnation Culture" and at the close he answered a number of questions.

The club officers nominated for the ensuing year are: F. J. Baker, president; Seward Hakes, vice-president; C. F. Seitzer, treasurer; J. C. Spencer, secretary. The election will take place at the next regular meeting, which will be held on May 7 at Mr. Seward Hakes' place at Hion, N. Y. It is the desire of Mr. Hakes that every member will endeavor to be present.

Peter Crowe has just returned from the rose show in Chicago. He speaks in glowing terms of the fine time he had there. On his homeward journey he stopped over at Buffalo and Syracuse and called on a number of old friends, including William Scott and P. R. Quinlan. He is now cutting some very fine flowers from his new house of roses, planted January 29; he expects to plant

three or four more houses this season, and he will probably be heard from when the rose show is held in Buffalo next year.

I called on William Matthews & Sons a few days ago and was very cordially received by Mr. Matthews and his son Harry. They were very busy handling bulbs for Easter. They have a fine lot of lilies and azaleas. Carnations were in fine crop; roses a little off for Easter, but orchids are a fine lot. A new importation of orchids is expected, and the firm contemplates the building of another orchid house this season.

Baker & Son have a nice lot of lilies and other goods for Easter.

Frank McGowan has a grand supply of carnations, sweet peas and bulbous plants for Easter.

C. F. Seitzer is cutting some extra fine Golden Gate; also Uncle John.

W. A. Rowlands' place is in fine condition and he will have a good cut of carnations for Easter. He is also growing 11,000 geraniums this year; all are now in 4-inch pots. He has about 20,000 young carnations for next year's planting.

E. J. Byam of Rome has his houses all right for Easter. He has a good lot of plants, but will be a little short of roses; there are some extra fine hydrangeas.

Jack Coakley of the Scranton Supply Company, who was here a couple of days last week, reports trade good—much better than he expected.

Brant Bros. will have a big cut of roses from their fifteen houses for Easter. M. Lowery will also have a good supply.

Members of the trade here anticipate a fairly good Easter business. Prices for the past two weeks have been low.

QUIZ.

LANCASTER, PA.—Daniel K. Herr of this place has a splendid line of fancy coleus which he is offering this Spring. Mr. Herr has been making a specialty of coleus for some time, selecting and getting together varieties combining the most ornamental features, together with their adaptability for commercial purposes, until now he has almost forty kinds, each one possessing a distinct beauty of its own.

Trade Notes.
Since last report the excess in stock has modified considerably, due to a sudden drop in temperatures and the off crop period. After a prolonged warm bright spell of weather came several very dark days and then freezing. This was a fortunate condition for the grower, for everything was advancing too rapidly. Thus far fruit trees, which are well advanced with bud, have escaped injury, as it was very dry and windy during the cold snap.
Stock is rather scarce at present. Easter coming on April 11 next year will tend to lessen the usual glut occurring about that time. So far as can be learned the prospects for good sales at fair prices are excellent for this Easter. Many local florists have already gone to other cities seeking stock for the occasion. Wm. F. Gude has been in Philadelphia.
J. A. Peterson of Cincinnati has been in Washington with a wagon load of specimen plants, exhibiting them among the stores and looking orders.
The funeral of Mr. Solomon Kann, which took place on Sunday, occasioned much fine funeral work.
JAS. L. CANNON.

RICHMOND, VA. Mrs. Maria L. Amory, mother of William L. Amory, florist, 510 North avenue, Brookland Park, died March 27, 1908. Her son has for a number of years been engaged in the florist business in Barton Heights and Brooklyn Park.
HUTCHINSON, MINN. The Litchfield greenhouse, owned by Allen Wheeler, was almost totally destroyed by fire recently. What plants were not killed by fire were frozen.

ST. PAUL, MINN.—Edward C. Parker, assistant to Professor Samuel B. Green in the department of horticulture and forestry in the Minnesota School of Agriculture, has accepted a position to found an experiment station in agricultural work in Mukden, Manchuria. Mr. Parker is a resident of St. Anthony Park, a graduate of St. Paul schools and of the Minnesota University, and has had several years of practical work in his department. Besides this he is already well known as a writer of good ability. Mr. and Mrs. Parker expect to leave in June and remain abroad five years.

Boston.

The Club Banquet. The banquet of the Gardeners and Florists' Club on Wednesday of last week, although held in the middle of the Lenten season, was one of the most successful ever enjoyed by this live body. About two hundred were present. The genial treasurer of the club, Edward Hatch, was master of ceremonies, and as he is a past master in this office he made it enjoyable for everyone, even those he called on to speak. After the dinner the toastmaster called on President Westwood, Secretary Craig, Vice-President Downs and J. K. M. L. Farquhar, each of whom devoted a few minutes to the entertainment of their listeners. Songs were sung by Mrs. Whittier, by Mr. Connolly and by Miss Hannigan, the latter proving her abilities so well that by special request she sang in her inimitable manner, "Killarney" and "Comin' thro' the Rye." A pretty feature of the evening was the presentation to Miss Hannigan of a bouquet of orchids by J. Lawson. The decorations were very tastefully arranged, Edward MacMulkin having had charge of that part of the program. William Sio, in his magnanimous way, presented each lady present with a bunch of violets; and a very fitting act of the toastmaster was his appointing Duncan Finlayson to select a bunch of the best roses and sweet peas from the tables to be presented to Governor Guild, who is still very ill at his home. Promptly at ten o'clock the hall was cleared for dancing and for several hours the Paragon orchestra was kept busy, while everything on the floor went smoothly under the able guidance of floor director Peter M. Miller, assisted by W. J. Collins, J. Lawson, Wm. Wylie, Jas. L. Miller, and Alex. Lowe.

News Notes.

W. H. Elliott and Mrs. Elliott have gone to Bermuda for a few weeks. W. A. Hastings, salesman for the A. H. News Company, flower pot manufacturer, has returned from a very successful trip in the West. Vice-President E. L. Pierce and H. C. Harris have been in Chicago the past week, arranging for the opening of the distributing warehouse, which the firm intends to fill the demands of its ever increasing trade in the West. Paul Richwagen has a very fine grade of anthurium at present. Welch Brothers say the Easter trade outlook is good; their orders for lilies in crates, of which they make a specialty, have been coming in fast and they expect a substantial increase in trade over last year. J. W. DUNCAN.

A Wonderful Achievement.

Rastus—Has you heard 'bout dat wizard, Burbank? Ephraim—I has not. What 'bout him? Rastus—Reports being true, his latest stunt will be a wonderful thing for de colof race. If I understands dis thing 'rectly he is now 'sessfully graftin' watermelon vines on a person's body.—Exchange.

SCHENECTADY, N. Y.—S. Charles Limmer will move his store from 126 Jay street to 321 State street about May 1. The new location is in the center of trade and the outlook for a good business is a bright one. The store is to be remodeled with a new front; other changes are also to be made. Mr. Limmer is at present making extensive preparations for an unusually busy Easter business. S. B.

Chicago.
The Week's News.
Poehlmann Brothers Company will have a grand crop of lilies for their Easter trade. The flowers are all well set and hardened, and crated in the company's usual good style they will ship safely to any distance without danger of bruising.
The different houses of the big Morton Grove establishments will vie with each other in the production of extra fine roses for Easter week. American Beauty, Richmond, Mme. Abel Chateauy, Mrs. Potter Palmer, Bride, Bridesmaid, Killarney, Golden Gate, and Perle des Jardins, will all be forthcoming in the best condition; and as the carnation range promises a big cut the orders of the company's customers can be well taken care of. At range A there is a splendid crop of pink and yellow snapdragon, as fine as anything ever seen in the Chicago market. Lily of the valley will be in excellent supply and those who saw the company's beautiful exhibit at the rose show recently, which was awarded first prize, can rely upon getting the same grade on their Easter orders.
J. S. Wilson, for many years manager of Vaughan's Greenhouses at Western Springs, Ill., has secured the greenhouse establishment at Des Moines, Ia., lately operated by W. L. Morris, and is now operating them to advantage under the management of his sons. Mr. Wilson will sever his connection with the Vaughan establishment July 11 and assume personal charge of the plant. The establishment at present consists of seven houses, each 235 feet long, heated by steam, and planted to carnations. An additional house, 235 by 27 feet, is to be erected immediately, and when completed the entire range will be utilized for cut flowers, ferns, and plant specialties.

Nos. 19-21 RANDOLPH ST., CHICAGO

didates were nominated for election at the next meeting: Swan Peterson, George Schuber, James Novak, J. L. Schillo, and J. B. Neill, all of Chicago. A discussion on "How to Correct Gluts" was indulged in, after an hour's intermission, during which a substantial lunch was served. The topic evoked considerable humor among the members present, and while no solution of the problem was offered, it was the consensus of opinion that in the final disposition of unsold stock the ash barrel was to be preferred to the more philanthropic method of donating the flowers to the public institutions, as the latter plan was found to be injurious to the florists' business in that it was detrimental to the trade of reputable florists in the hospital districts. The question of holding a club picnic during the Summer was deferred till the May meeting.
A. F. Longren, Des Plaines, Ill., has made arrangements to disseminate next season the carnation Lucille, originated by Fritz Bahr of Highland Park, Ill. This beautiful carnation, white, with diffused shell pink center, has been much admired in the Chicago market this Winter, and its vigorous habit of growth and great prolificness should destine it for a foremost place in the commercial carnation classes.

The E. F. Winterson Company has made big preparations for a large Easter trade and its facilities for taking care of out-of-town orders are better than ever before. An immense supply of well-grown lilies will be a feature of the stock during Easter week; fine hard flowers with long stems and excellent foliage will stamp the lily stock as among the finest to be found anywhere. Carnations will be strongly featured among the offerings, and roses, bulbous stock, snapdragon, callas, adiantum and everything else seasonable will be ready for shipment in the pink of condition. As usual there will also be on hand an enormous stock of ferns, galax and lencothoë sprays. In the supply store there will be an extensive stock of florists' auxiliaries, and the seed, bulb, and plant department will be able to take care of orders for anything and everything.

L. J. Stuppy of the Stuppy Floral Company, Inc., St. Joseph, Mo., dropped dead on Tuesday, March 31, and was buried in St. Joseph.

J. W. Breakey, the florist at 3215 Cottage Grove avenue, will move May 1 into new quarters, now being built, at 3307, a few doors north of his present store.

John Evans, of the Quaker City Machine Company, Richmond, Ind., was in town recently, gathering orders for his challenge ventilating device. He reports the following orders lately booked, most of them covering machines for new houses, built or about to be erected: Cook, Perry & Stroog, Grand Rapids, Mich., 20 sets; Holton & Hunkel Greenhouse Company, Milwaukee, Wis., apparatus for eight new houses, each 250 feet long; C. C. Pollworth, Milwaukee, 1 set, for four 24-foot houses; Placienzial Bros., Milwaukee, 4 sets for two 150-foot houses; E. Reustler, Madison, Wis., 4 sets for four 100-foot houses; Dr. C. G. Dwight, Janesville, Wis., 6 sets for three new houses, each 250 feet long; Mr. Erickson, Sunnysdale, Chicago, 2 sets for a house 150 feet; Ed. Murat, Park Ridge, Chicago, 5 sets for five 202-foot houses; Benj. Crape, also of Park Ridge, a set for a 100-foot house; H. Schwopke, Milwaukee, a set for a 125-foot house; John Essa, Chicago, 1 set for two 200-foot houses; J. F. Kidwell, Chicago, 1 set for four 250-foot houses. Mr. Evans says business is very satisfactory with him, in spite of the reported hard times, buried April 2. J. H. Pepper.

Indianapolis.
News Notes.

Tomlinson Hall market was profusely supplied with stock during the past week. Retail trade was up to the standard, but the store men bought little.
C. C. Thomas, decorator for Bertram Brothers Company, surprised his friends with a quiet wedding.

John Grande is well supplied with Harrisii lilies and other bulbous stock for Easter.

A visit to the plant growers disclosed an exceptionally fine array for the retailer to select from.

The New Castle florists supplied the winning candidate for Governor of Indiana with 20,000 American Beauties. He has race for the nomination. L. H. Anderson wonder that he won? I. B.

Trade and News Notes.

Cut flower trade the past week was dull. The weather for several days was cold and wet; the thermometer dropped to 24 degrees and hurt plant trade somewhat, but now we have ideal Spring days and the market stands are all occupied for the first time this year. Plants of all sorts seem to be plentiful, but people are kicking about prices. In the cut flower line lots of stock is to be had at fair prices and the quality is very good. Orders for shrubbery and trees are satisfactory so far, privets being in good demand.

John Bader spent a few days in the East last week, looking over stock for Easter.

Dan, Malie has sold his stand in the North Side market to Fred Eberle. Mr. Malie is running for the Legislature and, having very little opposition, is sure of election, so he gave up the stand.

Blind Brothers opened up their new store and conservatory on Center avenue, East End, last Saturday with a fine show of blooming and decorative plants and cut flowers. The place is fitted up in the best style and is well adapted for the florist business. Henry Blind will have charge of it and his brother George takes his place in the old store on Fifth street, while another brother, Edward, takes care of the greenhouses.

The cold spell of last week was a good thing for the plants for the Easter show in the park conservatories; if the weather had continued warm everything would have been ahead of time. The annual show will be better than ever before, as a greater variety of plants will be in bloom. Foreman J. Jones has worked hard for many weeks and it gives him great pleasure to have his friends, florists particularly, come and see what he has accomplished. Mr. Moore, who is in charge of the North Side park conservatories, also has a good show; not nearly as extensive as at Schenley, but well worthy of a visit. E. C. REINEMAN.

Newark, N. Y.

Mr. George C. Perkins, of Jackson & Perkins Company, Newark, N. Y., sails for Europe April 15, on the steamer "Majestic." He goes upon a business trip in the interests of his house, and will visit the leading places of horticultural interest in Great Britain and on the Continent. His itinerary will include Ghent, Boskoop, Haarlem, Hamburg, Erfurt, Quedlinburg, Trier, Luxembourg, Nancy, Lyons, Orleans, Angers, Paris, London, etc.; also a dozen or more small places in England where Jackson & Perkins Company have business connections.

SPOKANE, WASH.—The Spokane Nursery Company, of which J. H. Mumm is president, H. C. Rice, treasurer, and J. M. Harris, secretary, may soon be reincorporated, either under the name of the United Nurseries or the Rice-Mumm-White Nursery Company and the capital stock may be increased to \$200,000.

This matter was discussed at a meeting of the board of trustees of the company, as the result of the decision handed down in the superior court Thursday, March 26, by Judge Miles Poindexter. Judge Poindexter refused the Spokane Nursery Company a temporary restraining order against Otto Hubenthal, who is conducting his business under the same name, as had been asked in a complaint filed by the Spokane Nursery Company.

It was proven in the evidence offered in the case by the defendant, Hubenthal, that he had been transacting business under that name before the plaintiff company was organized and it is said that the general discussion of the court's decision will indicate that the defeated company considers the decision a fair one.

This company was formerly incorporated under the name of the Spokane Nursery Company with an authorized capital stock of \$50,000. The balance of the proposed \$200,000 capitalization will likely be subscribed by the Messrs. Rice, Mumm, W. J. Barsell, John Byers and other members of the corporation, it is said.

Although it is reported that the court's decision has inconvenienced the company somewhat, as they have been doing business under that name for the past year, the matter of reincorporation comes in at a favorable time, as it is reported by members of the corporation that it had been decided necessary to increase the common capital stock of the concern.

HITCHINGS & COMPANY
1170 BROADWAY, NEW YORK

New Bedford, Mass.

Trade the past week was a little better and showed some improvement over last week. Flowers are still very plentiful. Carnations are retailing at 50c. per dozen; some fine blooms are coming in. E. H. Chamberlain is receiving some fine Winsor blooms; this is a great favorite here in regard to color and brings 60c. per dozen, retail. Roses are selling at \$1.50 per dozen, retail. Violets from greenhouses are about done; there will be some to pick from outside frames, but they will be rather scarce for Easter the way things look now; they retail at \$1 per 100. Sweet peas are quite plentiful at \$1 per 100. Bulbous stock is very plentiful, 50c. per dozen being the price asked; there will be a good supply for Easter.

Wm. P. Pierce is making nice window displays at present. He is receiving fine carnation blooms from his grower, Robert Hsieh of Mattapoisett, a few miles from here.

J. H. Cleary, on Pleasant street, had another bargain day last Saturday; 8,000 carnations and 3,000 roses were offered at special prices—20c. per dozen for the former and 38c. per dozen for the latter. One party here is selling roses at 25c. per dozen blooms.

R. H. Woodhouse intends building another greenhouse the coming season; Spring openings here made quite a business for him.

Visitors the past week were F. Lautenschlager of Kroeschell Brothers Company, boiler manufacturers, Chicago, Ill.; L. D. Bryant of A. H. Hews & Company, North Cambridge, Mass., and C. H. Twinn of the King Construction Company, North Tonawanda, N. Y.

HORTICO.

JEFFERSON CITY, MO.—Because T. J. Brown, the florist on McCarty and Marshall streets, would not take a dare, he is married just a month sooner than had been arranged. Wednesday, March 25, 1908, while attending a meeting of the Sluiman Club in St. Louis in company with his fiancée, Miss Gertrude Eaton, of 1230 Clara avenue, some of the members of the club, who knew of the engagement of the couple, dared them to get married at once. Brown, who is always game, said he never took a dare, and 10 o'clock at night, with all the members of the club, they went to Clayton and were married.—Democrat.

WEST CHESTER, PA. West Chester's nurseries have grown to such an extent that they now surround the town on all sides. The business offices, packing houses and general headquarters, however, are on the northeastern borders of West Chester, and at that point many of the temporary workmen are housed. Those who work at distant points are hauled to the scene of operations every morning and go through West Chester at an early hour, before many of the citizens are out of bed. About twenty in wagons drawn by two horses form a large gang, and all smoke pipes and crack jokes as they are en route.

Mr. John A. Scollay, 74 & 76 Myrtle Ave., Brooklyn, N. Y.

Feb. 11, 1908.

Dear Sir: I am pleased to state that the six (6) Invincible Scollay Boilers that you have installed in my greenhouses, aggregating 65,000 sq. ft. of glass, have during the last cold spell worked admirably. I had no trouble in keeping the houses at the required temperature in the coldest weather which lasted for over a week, sometimes being four below zero. I have had a large experience in running almost all makes of boilers, but I think this is about the best I have ever struck. I cannot speak too highly regarding the whole heating system, for it reflects great credit upon your shop in all directions; from the boilers down to the complete job as installed by your mechanics.

Yours very truly,

CHAS. WEBER.

WILLIAM H. LUTTON
HORTICULTURAL ARCHITECT AND BUILDER

WEST SIDE AVENUE STATION (C. R. R. OF N. J.)
JERSEY CITY, N. J.

Have not been established 50 years, but long enough to convince the wide-awake Florist and Gardener that it is to his interest to place his work in thoroughly practical hands.

(150,000 sq. ft. glass erected in 1907 will substantiate this claim.)

And why not? My material is the best that can be secured. My iron frame construction has every modern feature that years of practical experience can embody.

And then there is the cost to be considered. Why not let us take up this important question now?

We make a specialty of Greenhouse stock for Commercial Growers of Flowers and Vegetables. Sash bars 32 feet long and over. Write for circulars and prices.

SECOND HAND PIPE AND BOILER TUBES

From 1 in. up to 12 in., for sale at low rates.

We can supply you with any amount from 100 feet and up. As we are large dealers in pipes, and do our own threading, we can sell same cheaper than any other dealer.

Our price card will be sent anywhere upon request, send for one.

EAGLE METAL & SUPPLY CO., Johnson Av. & Broadway, BROOKLYN, N. Y.

Each section is single tested under high water pressure—flaws, if any, are found.

Before shipment, every boiler is completely set up and given another severe test. When a boiler leaves our hands we know it is perfect.

And here is the "Burnham" with its deep fire pot, cross fire channels with side flue openings—and the fire travels three times the boiler's length.

BURNHAM FOUNDRY TESTS

are mighty important! Important to both of us—it makes us sure, as any human being can be sure, that every part goes together perfectly—flaws, if any, found, and that by a system of double checking of each part when the boiler is set up for its final test and re-checked again when taken down for shipment, that all

the parts are actually there for shipment.

In the rush season this shop set up test of ours sometimes holds up shipments a bit, but you gain time by it in the end, for when your boiler leaves our hands it is perfect, and all the parts there, ready for your immediate set up.

Hot water or steam. Burns hard or soft coal. Send for new boiler catalog.

FROM THE INSIDE

It is from the inside you get the full advantage of the curved eave, the extreme lightness of these houses—Nothing obstructs the view—it is almost as if there were no such confining limits as steel frame and glass. It is this freedom—that makes U-Bar houses so attractive. The airy cheerfulness—that makes U-Bar houses so productive.—Added to these are their simplicity, great strength, durability and low cost of maintenance.

The ideal construction for private estates, parks, public institutions and florists' show houses. Send for catalog.

FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

VOL. XXV. NO. 16

NEW YORK AND CHICAGO, APRIL 18, 1908

One Dollar Per Year

CARNATION CUTTINGS

We are in unusually good position to supply exceptionally well-rooted, healthy stock. We have such a large quantity of flowering plants that we propagate only from heel cuttings from flowering shoots. Our cuttings are rooted in light, sunny, airy houses, and we are sure will satisfy the most critical buyer.

A prominent carnation grower writes: "You seem to be THE ONLY FIRM IN THE BUSINESS THAT KNOWS HOW TO PACK STOCK AND HAVE IT REACH THE BUYER IN GOOD CONDITION, and I have always found your cuttings cheaper than the same varieties from others at much lower figures."

While our prices may not always be the cheapest, we certainly can give, quality considered, as good value as, if not better than, is obtainable anywhere.

WINSOR which we introduced last year has proven to be the finest novelty introduced in years. We think it is the most profitable variety grown to-day, considering its fine color, splendid keeping qualities, and productiveness. When properly grown, it leaves little to be desired, and almost everyone succeeds with it.

White Enchantress

the best all-round white carnation, on account of its large size, long stem, earliness, and productiveness. Our White Enchantress, exhibited at the Carnation Convention at Washington, was the only White Enchantress exhibited that received an award.

Strong-rooted cuttings, now ready for delivery, from sand, \$6.00 per 100, \$50.00 per 1000; from soil, \$7.50 per 100, \$60.00 per 1000.

Buyers will find transplanted stock offered from soil well worth the difference in price.

F. R. PIERSON CO., Tarrytown-on-Hudson, New York

We offer, also,

BEACON and RED CHIEF, from sand, \$6.00 per 100, \$50.00 per 1000; from soil, \$7.50 per 100, \$60.00 per 1000. Also

VICTORY, MELODY and WHITE PERFECTION, from sand, \$4.00 per 100, \$35.00 per 1000; from soil, \$6.00 per 100, \$45.00 per 1000.

VARIEGATED LAWSON, WHITE LAWSON and RED LAWSON, from sand, \$3.00 per 100, \$25.00 per 1000; from soil, \$4.00 per 100, \$35.00 per 1000.

We can supply, also,

WINONA and AFTERGLOW at \$12.00 per 100, \$100.00 per 1000.

TUBEROSES

True Dwarf "EXCELSIOR" Strain.

Our stock of Excelsior Pearl has been bred up by many years of careful selection from bulbs producing the shortest stalks with full heads of double flowers. But two or three firms can supply this extra dwarf "Excelsior" strain. First size bulbs, 100 \$1.00 1000, \$9.00.

TUBEROUS BEGONIA

Single white, yellow, pink and scarlet 35c. per doz., \$2.50 per 100; single mixed 30c. per doz., \$2.25 per 100; double white, yellow, pink and scarlet 60c. per doz., \$4.50 per 100; double mixed 50c. per doz., \$4.00 per 100.

CALADIUMS—Elephant's Ears.

Sound bulbs. Live center shoots. Ten per cent. advance if shipped from our Chicago store.

Circumference	100	1000

Seed Trade Report

AMERICAN SEED TRADE ASSOCIATION
 George S. Green, Chicago, Ill., president; M. H. Duryea, New York, first vice-president; E. W. Bolgiano, Washington, D. C., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; Leonard H. Vaughan, Chicago, assistant secretary.

PHILADELPHIA, PA.—W. Atlee Burpee and family will sail April 22 on the Adriatic for Southampton, where they hope to be met by Mr. and Mrs. A. B. Scott, who will spend a week with them before returning to America on the Adriatic. After a stay at the Isle of Wight Mr. Burpee expects to take in the Channel Islands among the other places he will visit when abroad.

CHICAGO. In response to the call of President Green of the American Seed Trade Association a meeting of seedsmen was held at the Auditorium Annex, on April 10. "The Mann Pure Seed Bill" was the subject under discussion. It was the sense of the meeting that important changes in the bill were needed to avoid great injustice to seedsmen and serious damage to important agricultural interests. A committee representing this meeting and the Seed Trade Association will be sent to Washington to attend the hearing before the interstate and foreign commerce committee on April 21. It is hoped that such amendments to the bill may be secured which will avoid injury to the legitimate seed business. The members of the committee thus far appointed are J. C. Vaughan and Charles Dickinson of Chicago, and Charles N. Page, Des Moines, Iowa. The meeting was thoroughly representative and well attended.

ALFALFA SEED GROWING IN FRANCE.
 The following information in regard to alfalfa seed in France has been obtained by Consul-General Robert P. Skinner, of Marseille, from official agricultural sources:

The crop of seed is gathered in August, September, and early in October, according to the region, though as a rule in September. The price received by the seed grower varies naturally with the year and the crop. In 1907 dealers paid 150 francs per 100 kilos (\$28.95 per 220 pounds) to farmers, this particularly high price being due to the destruction of a large part of the seed crop by inundations. One informant states that three-fourths of the Provençal crop of 1907 was thus destroyed. In ordinary years when the crop is abundant farmers receive 110 to 115 francs per 100 kilos (\$21.23 to \$22.20 per 220 pounds). Exports of the crop of 1907 have been sold to American buyers who bought early at \$26.62 to \$30.36 per 220 pounds.

The declared value of exports of alfalfa seed to the United States from the Marseille consular district in 1907 was \$19,866, against \$2,663 in 1906, and \$19,628 in 1905.

Seed Trade Notes.

We have most assuredly since the present month come in been enjoying an old-time rush for seeds. The final figures of such an active season cannot but be satisfactory, indeed; but there are always two sides to every picture, and it is to be greatly deplored, so enormous has been the demand for everything in our line for, say, the last four weeks particularly that many of the best customers of every seedsmen have been treated to long, and let us frankly admit, most exasperating delays in receiving their goods. We have all of us worked to the limit of endurance, but even with night work, and in many cases Sunday labor all day as well, it has still been impossible to fill all orders with a decent degree of promptness.

In the great rush of orders that has materialized, all quibbling over short seed stocks has been forgotten, customers being only too glad to take whatever in equivalent good varieties the seedsmen have been able to supply on their orders, in lieu of the many exhausted things so religiously selected and insisted upon earlier in the season.

During the past ten days there has been considerably more agitation in many directions regarding the "Proposed Pure Seed Legislation" of Representative Mann of Illinois—so recently brought before Congress. In regard to this matter the trade has been conservatively pleased to note that the general comments which have appeared in the better class of newspapers all over the country, have been practically unanimous against any such radical seed selling restrictions. No one wishes any more laws enacted that would simply be "dead letters" placed on our statute books—as the proposed required "98 per centum pure seeds" would certainly be. It very much seems as if in this case we were having a great deal of smoke and very little fire. I think Mr. Mann's Pure Seed Act is a dead one.

The all important question of how many Dutch bulbs shall be ordered for this coming Autumn's sales, as well as the Bermuda and Japanese stocks in this line, is becoming very pressing. The trade in general would seem to believe that all sorts of bulbs will this Fall sell quite conservatively. We must not be enthused too much over the great Spring seed business, as bulbs are an entirely different proposition. It points now to a fairly good business in September and October next in this class of goods, but no banner season by any means should be expected; and as usual when our customers "feel poor," the more inexpensive bulbs, such as tulips, narcissus and crocuses, will no doubt enjoy a much better sale than the more costly hyacinths and kindred stock.

Governmental Control of Seeds or Prices Versus Quality.

Editor Florists' Exchange:

The "Pure Seed" bill now before Congress, a bill to stop the adulteration and mislabeling of seeds, is looked upon by everyone of experience in the handling of seeds as too exacting; a bill, in its present form, which would work a hardship to the seed trade; which view is correct if the Department of Agriculture, to which is referred the making of uniform rules and regulations, is impractical in the drafting of such regulations; but the Secretary of Agriculture, under the authority given him to formulate rules, can so frame the rules as to make them practical.

The government cannot provide against the selling of a poor quality of seed at a correspondingly low price, or even at an outrageously high price, for that is a matter entirely between the buyer and the seller; but the government can step in and prevent the selling of unvital seeds and seeds mixed with other seeds, which it is obvious were not harvested in the same field at the same time.

There is ample room for the adoption of practical rules and regulations which may be not only a benefit to the entire agricultural public, but to every seedsmen who is disposed to be honest; and for one the writer is ready to let the Secretary of Agriculture do what he can to correct many things in the seed trade which sadly need regulation. Of course, within the Department of Agriculture

are the only people in the employ of the government capable of dealing with this subject; as for Congress to attempt to deal with it would be like setting a bull in a china shop.

The necessity for government control is brought about by the course of the seedsmen themselves. Intense competition between wholesale seed merchants doing a general seed business and large wholesale growers of special crops in the taking of orders for garden and field seed from jobbers and smaller dealers, both in cities and the country districts, has resulted in a breaking down of wholesale values to an alarming degree, the result being unprofitable all around as regards cash returns and as leading to a depreciation of quality.

At the present day many seed farmers only obtain a profit from their seed crops very little above profits on corn, hay, and potatoes, and they cannot be expected to expend, on the one hand, the necessary labor in culling crops, and, on the other hand, to be willing to stand the reduction of many pounds or bushels to the acre because of taking out the rogues, or wild plants, which plants generally are by far the most productive of the whole crop.

This depreciation of quality in many brands of seeds is noticed in any well-managed trial ground, where it is manifest that seeds sold at extremely low prices have been sold even then higher than is their true value. This depreciation in quality applies to nearly everything sold at extremely low prices, which cheap prices in the very beginning indicate a questionable origin of the stock.

Often this depreciation is laid at the doors of the country storekeepers, but it really is chargeable to a great degree to larger seed sellers striving to get orders at any price. These cheap prices demonstrating to the country storekeeper that many seed houses and seed contractors have no bottom whatever to their prices, the storekeeper is convinced that even at these low prices he is asked more than he should pay; he thinks the seedsmen is after all a robber, and he places the order with the cheapest house.

To be able to sell cheaply stocks must be obtained from any low cost source, and the result is a continuous depreciation in quality. The country shopkeeper, drummed almost to the point of distraction, finally selects his garden vegetable seeds or agricultural seeds of the lowest priced sorts, and certainly gets a grade in accordance with the prices.

But lowest prices are not demanded by market gardeners who purchase their seeds with the one idea of making a profit from the results of their crops, men who realize the necessity of reliable stocks, and, therefore, are anxious to purchase from a source of reputation and are ready to pay a price which gives some assurance of quality. Market gardeners light shy of cheap seeds, knowing that the very price condemns them; but the country merchant wants his seeds to be as cheap as any sold by a competitor across the street or around the corner.

The logical result can only be just what has occurred in other branches of trade—there will be two or three grades of seed, just as there are two or three grades of candy—every girl knows that; and two or three grades of drugs, as every observant man knows, for it is well known that physicians recommend their patients to avoid certain drug stores because the proprietors are known never to purchase anything but the cheapest drugs. And just so will it be with seeds, for some dealers in seeds purchase anything; with them seeds are just seeds.

But, thanks to the technical intelligence, self-respect, and high ideals of many wholesale seed merchants and many seed-growing contractors, there has been in the past, and yet is more active than ever, a constant effort toward the improvement of species, for it is manifest that all the varieties of vegetables which can be mentioned as notable objects of deterioration in the hands of careless men, have at the same time vastly improved in the hands of a few who prefer an honorable reputation to shoddy dollars.

In the past the writer has been inclined often to be incensed against what he considered the masterful ways of the Department of Agriculture, but is changing his opinion, for the work in the seed division, if properly regulated, may be on lines similar to the work of Doctor Wiley with respect to foods and their adulterations, and everyone freely admits that the genial doctor has in two or three years accomplished wonders in bringing manufacturers of adulterated

foods up to the rack, and forcing them to label their manufactures just according to their component parts.

True seed investigations cannot be pursued with the same thoroughness as in the case of food preparations, but much can be done to arrest the selling of cheapened seed, adulterated seeds as shown by the microscope, and unvital seeds as shown by the germinator; and those seedsmen who have clean consciences should support investigations which will bear on the unscrupulous.

The agricultural public can properly demand a safe-guarding of their interests against the selling of such seeds as are without doubt a fraud, which impositions cannot be guarded against if too great a laxity of law is permitted to prevail. The writer would like to see the law so framed that there could be no fraud in the seed business any more than in an apothecary shop, either by a man ignorant of the nature of the business, or by a rogue.

The seed business is one of confidence; a purchaser is entirely in the hands of the seller; very different from the case of a purchase of a pair of shoes or a hat, where the purchaser can there and then judge the quality of the completed article.

BURNET LANDBRETH.

IMPORTS OF SEED, ETC.—April 4 and 5, Wadley & Smythe, six cases trees, April 6.—L. D. Crossmond & Company, one case trees; H. F. Darrow, eight packages seed, two cases plants; Maltus & Ware, one case plants; McHutchison & Company, 22 bundles and eight packages trees; C. A. Haynes & Company, two cases seed, five cases plants, April 8.—Maltus & Ware, six packages trees, one case plants, six tubs trees; August Rölker & Sons, 15 cases plants; John Scheepers & Company, eight cases plants; J. Ter Kuile, one case plants; F. B. Vandegriff & Company, three cases plants; Gerhard & Hoy, one case trees; H. H. Hornbeck & Company, one case plants; Rooney & Spence, 15 baskets trees; J. M. Thorburn & Company, three bags garden seed; F. R. Pierson Company, seven cases trees; J. W. Hampton, Jr. & Company, two cases trees; C. B. Richard & Company, 26 cases plants; Vaughan's Seed Store, four cases trees and shrubs; Orlando J. Smith, 31 packages plants; P. A. Keenan, one case plants; McHutchison & Company, one case plants; R. F. Lang, three cases plants; P. H. Peiry & Company, one case plants; August Rölker & Sons, 10 cases plants; Wadley & Smythe, 11 cases plants; Cleary's Horticultural Company, six cases plants; William Elliott & Sons, 22 cases plants; Maltus & Ware, 117 packages plants, etc. April 9.—H. F. Darrow, six packages plants; Maltus & Ware, three packages plants; C. C. Abel & Company, 13 packages plants; P. B. Vandegriff & Company, 14 packages plants, April 10.—Rooney & Spence, 12 barrels trees, April 11 and 12.—Wm. Smartwood, 692 cases live plants, one box seed; E. Maureno, one crate bulbs; C. W. Lemvitt & Company, six packages trees; Brown Brothers & Company, 56 cases pine seed; C. E. Daily, two packages live trees; C. C. Abel & Company, 23 cases live plants.

European Notes.

The late date at which Easter falls this year is causing quite a mix-up of the seasons. The demand for garden seeds continues, and already the wholesale firms are in the thick of dispatching their advance orders for turnip, mangol and other farm seeds. Judging by the way trade has opened out there will be a good demand for these articles this season, and as prices of turnips and rutabagas rule high this department of our business should be somewhat more profitable than of late. The reports from the growing districts respecting the prospects for next season's crops of these articles are so uniformly unfavorable that buyers fully recognize the enhanced values.

There has been quite a revival of the demand for mangels of the long red type, and this in spite of the fact that they were supposed to have been supplanted by the giant half-sugar varieties. The latter are steadily making their way, especially in France, but Germany still swears by the Eckenlof, while England remains faithful to the giant yellow globe.

The efforts of the Royal Dutch Bulb Growers' Society to revive the culture of hyacinths in pots in England by the offer of liberal prizes at the Royal Horticultural Society have not been crowned with success. Only one trade exhibit was staged, and in this case the pots were the best part of the show. The amateur classes were a shade better and more numerous; but the competition was chiefly remarkable for the fact that the American ambassador (Hon. White-law Reid) had to play second fiddle to a British aristocrat (Lord Howard de Walden). Wake up, America!

EUROPEAN SEEDS.

RE-NAMING SEED NOVELTIES.—Commenting on the resolutions recently adopted by the Wholesale Seedsmen's League, the Horticultural Advertiser, Eng., says:

"The only point upon which we are not quite clear is as to the reading of the word 'Introducer.' Does this possibly cover the purchase and introduction of a novelty from Europe, and in this case is the introducer to be allowed to re-name same for the American trade? Or to put it baldly and plainly, do these new resolutions bind the American trade to act squarely in this matter toward its own members or had the framers a wider outlook and the intention of covering the civilized world?"

"It should be clearly understood that we are throwing no stones on this occasion, living as we all do in glass houses. On the contrary we earnestly wish that the seed trade here would also seriously consider the question and come to the same conclusion as our American confrères. At the present time, a really good carrot, lettuce, or any other vegetable raised on the Continent is introduced and promptly catalogued as 'Brown's A. 1.' 'Jones' Wonder' and 'Robinson's Magnificent' by the leading houses, the process being carried on the next season by all the lesser lights, so that in a year or two the same strain appears under some forty different titles, the rights and wishes of the original raiser being absolutely ignored."

"There is of course the polite fiction current in certain quarters that such care is taken in growing and selecting these strains after introduction, that they are radically altered and the introducer thus entitled to re-name at discretion; but we will not abuse our readers' patience by any lengthy discussion of such a lame contention. Our own opinion is that the present system is a blot upon an otherwise honorable trade, and the sooner it is removed the better for the credit of all concerned."

CATALOGUES RECEIVED.

CONRAD APPEL, Darmstadt, Germany.—Illustrated Catalogue of Tree and Grass Seeds.

KIRKMAN NURSERIES, Fresno, Cal.—Illustrated Price List of Fruit and other Trees, Decorative Plants, etc.

THE FRIEDMAN INSECTICIDES MANUFACTURING COMPANY, Brooklyn, N. Y.—Price Lists of Insect Powder, Tobacco Dust, etc.

CONARD & JONES COMPANY, West Grove, Pa.—Trade Price List of Roses, Cannas, Shrubs, Plants, etc. Illustrated. The lists are very comprehensive and include the latest novelties.

THE LEECHLE FLORAL COMPANY, Springfield, O.—Illustrated Catalogue of own root Roses, and Bedding Plants. A very comprehensive collection. A novelty listed by the firm is "Kaiserin Goldfolia," a sport of Kaiserin Augusta Victoria, white flower, foliage "a bright golden yellow, delicately veined and shaded."

THE STANDARD PUMP & ENGINE COMPANY, Cleveland, O.—Catalogue of Standard Pumping Engines using gas or gasoline for fuel, showing designs adapted for pumping from shallow wells, cisterns, lakes or rivers, etc., and others adapted to pumping from deep wells. Illustrated. The catalogue fully describes the firm's specialties and will be read with interest by all concerned in these necessary and useful machines.

ISAAC HICKS & SON, Westbury Station, N. Y.—General Catalogue of Nursery Stock, Roses, Hardy Garden Flowers, Small Fruits, etc. Beautifully and profusely illustrated, and giving very full descriptions of the subjects enumerated. Many of the illustrations afford helpful suggestions as to planting. This firm makes a specialty of transplanting large trees, for which purpose its patented tree mover is well adapted. An interesting and complete catalogue.

Baby Rambler Roses

A type of Rose which is becoming very popular for bedding purposes. They form shapely, compact, bushy specimens about 18 inches high, producing great profusion from early in the season until severe frost unwise trusses of small flowers.

Crimson Baby Rambler (Mme. Norbert Levasseur). An extra fine lot of strong two-year-old plants, \$2.50 per dozen, \$20.00 per 100.

Pink Baby Rambler (Anchen Muller). Brilliant luminous pink, a shade that is always admired. \$3.00 per dozen, \$25.00 per 100.

White Baby Rambler (Katherina Zemet). Pure white flowers, showing the yellow stamens very prettily, produced in large candle-like shaped trusses. \$3.50 per dozen; \$25.00 per 100.

Dreer's Offer of Select Roses

STRONG TWO-YEAR-OLD PLANTS in 5 and 6-inch pots, specially prepared for outdoor planting.

The Roses which we here offer are field-grown stock, either American grown or plants that have been imported from England and Ireland. We handle no Holland grown Roses.

These plants are all potted up during December and January, and were stored in cold houses; they are now growing freely and are in prime condition to sell to your retail trade; all are in 5 and 6-inch pots, according to variety.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSERYMEN,

J. W. Hill, Des Moines, Ia., president; C. M. Hobbs, Bridgeport, Ind., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

LAKE CITY, MINN. Roy D. Underwood was elected mayor of Lake City, Minn., on April 7, 1908. He is one of the well-known and rising young men of Minnesota. He is the son of J. M. Underwood of the State fair board of managers, and as the secretary of the Jewell Nursery Company of this city is prominently identified with the horticultural interests of the State. When he assumes his oath of office he will bear the distinction of being the youngest citizen ever elected to this position.

ILLNESS OF PROFESSOR JOHN CRAIG.—Nurserymen and horticulturists generally throughout the country will regret to hear of the illness of Mr. John Craig, Professor of Horticulture at the College of Agriculture, Cornell University, N. Y. For some time past, Professor Craig has been suffering from acute stomach trouble. In hopes of obtaining relief he sailed with his wife and son for Egypt on the first day of February. The voyage was rough and uncomfortable for the sick man, who suffered considerably. He had thought that the fine winter climate of Egypt and the change of scene would benefit him. It was found necessary, however, to give up this trip. Some days were spent at Genoa, Italy, in recuperating from the effects of the voyage. At present, Professor Craig is at Lausanne, Switzerland. The services of a skilled surgeon have been secured and an operation will be performed to bring relief and cure to the patient sufferer.

AMERICAN ASSOCIATION OF NURSERYMEN.—The thirty-third annual meeting of this organization will be held in Milwaukee, Wis., June 10 to 12 next. Mr. Seager, who fills the dual capacity of secretary of the association and chairman of the committee on arrangements, has secured a very satisfactory contract with the management of the Hotel Plankinton for convention headquarters, and those who attended the annual meeting held in this hostelry a few years ago, will recall with much pleasure the courtesies extended us at that time.

Mr. Berckmans, chairman of the committee on program, assisted by his associates and Secretary Seager, is arranging an excellent program which is to occupy a session of about three and a half hours each day, and the remaining time is to be devoted to social features and sight-seeing, the latter of which is in charge of the local committee, of which Mr. Ferguson is chairman.

Mr. Meehan, chairman of the committee on exhibits, aided by Mr. Kelsey and Mr. Bernardin, expects to completely fill the large and commodious exhibition room generously tendered by the Hotel Plankinton. This feature of the annual meeting is becoming more important and valuable each year, and much time may be profitably spent in this department. The gentlemen of this committee represent distinct and separate sections of the country, and we may confidently expect them to have a more extensive exhibit this year than last, which was the best in the history of the association.

The committee on legislation, of which Mr. Pitkin is chairman, as well as that of uniform inspection law, headed by ex-President Harrison, and various other committees, will have interesting reports.

The management of the C. M. & St. P. Railway has arranged to run a nurserymen's special from Chicago on the morning of the 9th, to which special cars bearing delegations from the East and South are to be attached.

J. W. HILL, President.

Hardy Evergreen Climbers.

The correspondent who asks for a list of evergreen climbers will have to be satisfied with a short one. Here, even in Philadelphia, where Winters are not over severe, we are compelled to be satisfied with the English ivy and the *Euonymus radicans*. Both are quite hardy, no matter where growing, but the English ivy does the best when on the eastern end of a dwelling, where but little sun gets to it. In very severe Winters it will become of a browned appearance when in a sunny situation, but it is rarely much injured, no matter where growing.

The *euonymus* is hardy anywhere, no matter what exposure it has, but its comparatively small foliage calls for its use on low walls rather than on high ones or on dwellings. It is often used on low walls, bordering lawns or embankments and appears to suit such situations better than the English ivy does. There are many owners of dwellings who if asked their choice between the English ivy and the Japanese ivy, *Ampelopsis Veitchii*,

would choose the latter. The evergreen of the English ivy is less pleasing to some than the deciduous character of the Japanese. *Ampelopsis Veitchii* makes leaves early in Spring; as soon as frozings are over they appear, and the changing character of the vine, its pretty foliage in Summer and its orange scarlet tint in

Chamaecyparis Nutkensis.
(*Thuja borealis*).

Autumn please greatly. Undoubtedly there is room for both vines, just as there is for both evergreen and deciduous trees and shrubs.

But for all purposes of covering surfaces of walls and like structures there are no other creepers that could do as well as the English ivy and *Ampelopsis Veitchii*.

Propagating Purple-Leaved Hazel.

A correspondent inquires if the purple-leaved hazel could be raised from its nuts. Answering this, it may be said that a hazel is but a variety it is unlikely that it would come wholly true from seed. The experience with other purple-leaved varieties of trees and shrubs is that seedlings vary; at times the greater number of them will come true, then at other times but a few will do so. There is no dependence on them. In the case of the purple-berberry the greater number of the seedlings will be purple, and nurserymen obtain the seeds of it and sow them, relying on getting the greater quantity of purple; and the picking out of the few green ones is done by marking them when they are in leaf while in the seed beds. Weeping trees and all others of a varietal nature behave in much the same way when grown from seeds.

To increase the purple-leaved hazel, layering is usually resorted to. Strong plants are cut down in early Spring, to induce strong shoots to form, and these shoots are layered when of sufficient length. It is really the only feasible way, because when in cultivation this hazel rarely seeds when growing alone, hence nuts of it are unprocurable. Hazels in this respect are in line with many other trees and shrubs; seeding is always more prolific when several are growing near each other, one fertilizing the other.

Setting Hedges of *Berberis Thunbergii*.

Owing to the beauty of the Japanese berberry, *Berberis Thunbergii*, when used for hedging it is extremely popular for this purpose. It makes such a close growth that it is a defensive hedge where wanted for such a situation, but it is as an ornamental division hedge that it finds its greatest use. Its pretty, close growth, neat green, small leaves, which turn to a scarlet color in Autumn, yellowish white flowers in Spring and scarlet berries in late Summer, Fall and Winter, make a list of merits no other shrub possesses to a like degree; and after its first year of planting it needs no pruning.

As it is of a nature that pushes forth its leaves very early in Spring, it causes a distrust of planting it later in the season; but when planted with foliage well expanded the plants will live, with proper treatment. In the first place, do not permit the roots to become dry at any time while out of the ground. Prune back the shoots about one-half. See that the soil is firmly pressed about the roots. Sand is good material to fill in about the roots, that is, for the first covering of them, as it completely fills all crevices. When the planting is done at the proper time in Spring no watering is required, but, later, when the leaves are well out, a good soaking when the trench has been about half filled in will be the assuring of success.

Chamaecyparis Nutkensis (*Thuja borealis*).

Nurserymen are loth to change the names of their plants, even when those they have are not the authorized accepted ones, because it causes confusion to those of their customers who are not botanists and who may have acquaintance with the plants under their old names. The evergreen we have before us now is of this class. It has been in horticultural literature for fifty years or more as *Thuja borealis* and is still listed as such in some catalogues, yet its correct name is *Chamaecyparis nutkensis*.

Although coming from the Pacific Coast, whence come so many evergreens that do not succeed well with us, it is one of several that are quite at home in the Middle States; and the surprise is that it is not better known than it is. Near Victoria, B. C., Mr. Knight wrote us of some beautiful specimens existing there, where it is native. The one illustrated agrees well with what is said to be the tree's habit of growth, and yet as it grows here it is often several more feet in diameter at the base in proportion to its height than the one of our picture. The specimen shown is growing on an elevation the descent from which is quite rapid, and its position is such that it would be apt to become of a quite conical character.

Nearly or quite all of the members of this genus thrive best in a moist soil, well drained but still moist.

Many other well known evergreens have now been placed under the same name as the *Thuja*, viz., *Chamaecyparis*. The *retinisporsis*, *Cupressus Lawsoniana* and *C. thujaoides* and their varieties are all now under the one head, but it is questionable whether nurserymen can follow the scientific leaders as yet. By accustoming their customers to a change, by using both names in their lists, it could be brought about in time.

We would recommend this, the Nootka Sound cypress, as it is called, to the attention of planters. It is quite distinct from any other evergreen. Fortunately its roots readily from cuttings taken off in early Winter and rooted in heat in a greenhouse. For some unaccountable reason seeds are rarely to be had in the trade, hence plants from cuttings have to be looked for.

Cocoon Fiber.—In answer to the question of B. C. B. in the issue of April 4, page 180, we would say that Wm. Elliott & Sons, 201 Fulton street, New York City, handle cocoon fiber.

We are in receipt of the following communication, which is self-explanatory: "I notice in The Florists' Exchange an inquiry about cocoon fiber by B. C. B., Ohio. I write to inform him that we are the only handlers of fiber in this part of the country, from a carload down to 25c bags. TWENTY-FIFTH CENTURY PLANT FOOD COMPANY, 27 and 29 Ocean street, Beverly, Mass."

(69) **Ferns and Firs, Natives of New York State.**—What ferns and firs are natives of New York State, and which are the more numerous? I would rather have just the common names.
North Carolina. SUBSCRIBER.

—I cannot give to a certainty the list of ferns to be found in New York State, but would expect to find all the following there: Adder's tongue fern, moonwort, three species, climbing fern, flowering fern, three species, polypod fern, probably four species, ostrich fern, rock brake, four species, maidenhair fern, mountain fern, spleenwort fern, probably six species, walking fern, rock polypod, bladder fern, sensitive fern, shield fern, probably five species.

Of firs, the only one is the balsam. The common names only are given as desired.
J. M.

(70) **Thrips on Carnations.**—My house of carnation Enchantress is affected as per foliage sent herewith, the tips of the leaves becoming yellow and dry. The other varieties seem to be in good health. I enclose a leaf that seems to be variegated by the influence of some pest; this is only on a few plants. What is the cause of the trouble?
R. L.

—The carnation foliage appears to have been badly affected with thrips at some time or other, and the marks left there are caused by the punctures of those insects. The only remedy that can be applied at the present time is to syringe with some tobacco insecticide, repeating the syringing every four or five days so as to thoroughly get rid of the pest. Once the thrips are all destroyed the new growth of the carnations will not have that variegated appearance.

Hardy Roses

American Grown—Superior to Imported
We have unsold at the present time the following varieties—all field grown plants, grown in our nurseries at Rochester, N. Y.:

Anne de Diesbach	Prince Camille
Clia	Erich Brunner

NEW CANNAS 1908

ROSEA GIGANTEA

This beautiful variety has extra large flowers which are borne in such abundance that the mass of color on each plant is amazing. Single petals are 2 1/4 inches across; color, a deep rich rose, almost a coral carmine. Plants make a vigorous growth, producing unusually fine clumps of green foliage. Height, 4 feet. (A great favorite with visitors to our trial grounds.) Strong plants, \$2.00 each, prepaid; \$18.00 per doz. by express, not prepaid.

GLADIO-FLORA

Remarkable for the unusual shape of the flowers, which look like large Gladiolus. Petals are not long, but short and rounded and so wide they overlap

each other, thus giving a very attractive appearance to the flowers. Color is crimson, changing to carmine rose with an uneven edge of gold to each petal. Height, 3 1/2 feet. Price, strong plants, \$2.00 each, prepaid; \$18.00 per doz., by express, not prepaid.

CANNA METEOR

Meteor is a vigorous grower with healthy green foliage. It is highly valued because of its magnificent flowers, fully four inches across, and abundance of bloom. Color is a deep crimson, very rich; each plant usually throws up five to six trusses of buds which continue blooming luxuriantly all Summer through. Price, plants or dormant roots, 75c. each, prepaid; \$5.00 per doz., by express, not prepaid.

NEW CANNAS OF SPECIAL MERIT

WILLIAM SAUNDERS

(1907) The flowers are large, of splendid form and are borne very freely in immense clusters. The color is a deep rich shining scarlet lightly dappled with crimson. Foliage is a rich bronze.

Height, 3 1/2 to 4 feet. We believe that Wm. Saunders is decidedly the most perfect canna of this type that has been introduced. Those who tried Wm. Saunders in 1907 say it cannot be excelled. We offer plants only; 80c. each, prepaid; \$5.00 per doz., \$35.00 per 100, by express, not prepaid.

60 other Varieties. Send for list and prices

THE WEEK'S WORK

Timme's Timely Teachings.

The Busy Season.

Florists, seed merchants, nurserymen, all are now at their busiest. The rush that Easter brings is only the beginning of the retail and wholesale plant grower's most active season, a foretaste of what is yet to come, as lively a time, no doubt, as any ever occasioned by a demand for the good things plantsmen are wont to offer in the Spring. The retail plant grower, who works like a beaver in preparing for this, his most important line and time of trade, never missing his holiday opportunities besides, prefers an early Easter to one coming as late as this year's. Much of the work, of necessity deferred until after Easter, should have been attended to sooner. Considerable space occupied by holiday stock—the best available—was badly needed long before this. Any sort of overcrowding of young and rapidly advancing bedding and general greenhouse plants, meagerly allotted attention occasionally amounting to real neglect, unavoidable though it may have been, never comes nearer to working serious mischief than as so forward a period of the most favorable of seasons for the furtherance of plant growth. Easter over, with room gained and judiciously utilized, will to some extent rectify many of the wrongs alluded to. This should be first in the coming week's work.

The Packing of Growing Plants.

The lateness of Easter and consequent scarcity of room also had the effect of delaying orders for young stock and rooted cuttings, to be sent for in good time, as per oft-repeated advice. This, too, is a matter that now should be attended to without further delay. Former dealings with large growers of stock needed by the smaller ones, furnish these latter with a variety of experience difficult to acquire in any other way. The substitution of varieties for those ordered, or of larger and higher priced plants of the same kind for the sizes wanted, or, worse still, the sending of stock much inferior in quality to what it was claimed to be, all these evidences of trade-killing subterfuge and improbity, practiced right smartly in bygone days, are not among the causes for just complaint at the present time. Exceptions, if there are any, are few. It can truly be said that plants as now grown in masses for wholesaling never gave clearer proof of good culture or the business rectitude of their shippers. But in spite of all this, or rather because of the unmistakable evidence of the sender's best intentions and the fine condition the plants were in before being made up in the order, the buyer on their arrival very often, not always, has ample cause for complaint and deeply felt regret. What in the name of common sense is the use of going to all the trouble and expense involved in the growing of excellent stock and then undoing it all in the packing for shipment? Very often at arrival the erstwhile finest plants are practically ruined—for the time being at least; part of their shoots and branches broken, many of the leaves gone or yellowed, sometimes lower stems and foliage slimy with decay, all owing to careless, reckless wrapping and packing. Rooted cuttings of a somewhat tender or soft growth not infrequently present a sorry sight after the recipient has removed the needlessly heavy wrapping, finding in the lack of sufficient moss on and around places where it should have been placed, or in its being too dry or soaking wet, the cause of all the plight. But there is one insane way of packing soft growth, tender rooted stock which more than aught else is apt to arouse the ire of the most forgiving of plant growing mortals. It is this: the finding of several plants squeezed into one dry, hard, shapeless lump, apparently by the exertion of superhuman force. Not only is some of the top-growth smashed and tightly imbedded in the brick-like mass, but most of the roots are crushed and broken in the performance of the brutal act. If these plants, nicely root-bound, had been wrapped singly in a small piece of brown paper, had been placed, even pressed tightly together in an upright position on a cushion of excelsior overtopped with a layer of wet moss, their upper growth and foliage free, in a box not overtightly nailed up, they would

have stood quite a long ride at this season, would have arrived in good condition, ready for going into pots a size larger and to be grown on at once. If but a day or two on the road, plants of most kinds, carefully wrapped singly or several in a bunch—rooted cuttings from one to two dozen together—can be laid flat-wise, several layers one above the other, and no harm will touch them during transit. All should be correctly and legibly labeled, one label for each lot or variety, and the various lots separated by partitions in the form of wood or paper.

Planting and Potting.

Much of the stock, hardy or hardened off, that now takes up considerable room in frames and houses, can go in the field or be planted in borders and beds. No risk, however, should be needlessly run by being too hasty in the transfer of insufficiently hardened stock from warm quarters to the open. An intermediate forth-bringing from house to frame, although entailing a deal of extra labor, is the safer course to take in the case of greenhouse reared stock that is to be planted in the field in April or early May. There is no more convenient place for the weaning of plants than a frame, the half-way station between indoor and outdoor conditions. Whatever room is gained anywhere under glass by the shifting about or planting out of plants is now required for the vast numbers of seedlings and cuttings ready for pots. All cuttings should be potted up before the newly made roots reach any real length; their being in evidence alone correctly points the right time. Many kinds of seedlings must undergo a transplanting prior to being potted, while some may be allowed to remain in their first seed boxes until of fair size, big enough for being potted up or planted into the free soil of a bench, a frame or the garden. When grown for the general trade in bedding plants, pot grown stock is to be preferred, the few exceptions being daisies, pansies and some of the flowering sized, two-year-old herbaceous garden plants. All seedlings of fast growth are planted deep, nearly up to the seed leaves; dahlias, palms, cannas, verbenas, cosmos, etc., require the depth of rose pots; ferns, begonias, cyclamens, celosias, torenias, the shallow or begonia pots, and nearly all others the ordinary standard make, which also, if need be, will do fairly well for any of the first named kinds.

Soil.

Good soil is an essential to success in this sort of business, one of several. Good soil for an all-around and everyday use in an establishment devoted to the growing and selling of many kinds of stock, most of it of the more common species of garden and market plants, is not always easily and cheaply obtained, must be bought in good season, be worked and prepared long before it is used, but it never costs the practical grower a moment of worry as to its fitness, nor does he lose much time in being over nice in the preparation of special brands and mixtures. Good potting soil for small stock should before all else be sweet and fresh; it should contain plant food in some form, decayed barnyard manure, not visible in the mixture, being always the safest, the amount varying as to the kind of plants to be potted; it should be of the friable, not the baking sort, should feel gritty, whether this is due to its sandy nature or other ingredients, and finally, when ready for immediate use, it should possess the temperature of the house, be fairly moist, so that it does not roll when heaped up and permits of being properly firmed in potting.

FRED. W. TIMME.

ASPARAGUS Plumosus and Sprengerl, strong plants, 2 in. pots, \$2.25 per 100.

J. H. DANN & SON WESTFIELD, N. Y.

New York.

The Week's News.

The club meeting on Monday evening was extremely well attended, and everyone was glad to be in a comfortable meeting place again.

We announce, with deep sorrow, the death of Jeannette, daughter of Mr. and Mrs. James Dean, Freeport, L. I., who passed away at San Antonio, Texas, whither she had gone in search of health, on Thursday morning, April 9.

A. J. Guttman, wholesale florist at 43 West Twenty-eighth street, has leased a much larger store at 34 West Twenty-eighth street in the Volunteer Building.

Among the creditors of Caroline E. Scallen, who filed a petition in bankruptcy last week, are George Schlegel, \$1,098; John L. Raynor, \$575; A. J. Guttman, \$531; Julius Roehrs Company, \$460; and Walter F. Sheridan, \$349.

Robert Berry has charge of the planting of the new St. Nicholas Park, which is located in the upper part of the city, under the superintendency of Landscape Architect Parsons of the city parks.

On Tuesday, April 7, a boy was born to Mr. and Mrs. Joseph Levy. Mr. Levy is of the firm of John Seligman & Company, wholesale florists, at 56 West Twenty-sixth street.

The weather has been so far rather cold since the opening of the plant market at Canal street, yet the peddlers can be seen in all parts of the city almost with their loads of flowering plants, all of which is evidence that the growers are meeting with the usual success at their early morning market.

The auction rooms throughout the city—and we have three now in operation—all report a good business in the plant line, both in domestic flowering plants and in imported hardy stock.

So far as we can see at this writing (Tuesday, April 14), there will be a supply of lilies large enough to fill all wants—that is, so far as the cut lilies go. The lilies sold on plants that are of suitable height will probably not be any too plentiful, and 12c. per flower or bud will no doubt be realized for a great many.

Patrick O'Mara of Peter Henderson & Company left on the midnight train on Monday for Washington on business.

John Cleary, father of John P. and Ambrose Cleary, died at his home in Haverstraw, Tuesday, April 7, at the age of 76 years. Mr. Cleary was born in Valley Shannon, County of Donegal, Ireland, seventy-six years ago and came to America when he was about seventeen years of age. He located in Brooklyn, and for a number of years conducted merchant tailoring establishments in that city, moving to Haverstraw, N. Y., about 1872. He was twice elected assemblyman for his district, and was one of the best-known citizens of Rockland County. He is survived by a widow, three daughters and three sons, William V., John P. and Ambrose. The funeral was held Friday, April 10.

For the purpose of encouraging the cultivation and the study of orchids and the formation of orchid collections a com-

mittee of the Horticultural Society of New York has been established with a view to forming an orchid section. This action is the outcome of the recent gathering of a few orchid enthusiasts in New York, as it was the unanimous feeling of those who took the initiative that the times were not propitious for the forming of an independent society.

St. Louis.

News Notes.

Among the retailers there is much activity at present, as a great many church decorations are on for this week and advance orders are being placed for Easter. George Waldbart's store on Grand avenue is loaded down with everything in season. Mrs. Ayers' place is also a mass of blooming plants.

Indications point to an active Easter trade in all branches. The cut flower stock promises to be fairly abundant in carnations and roses, and in bulbous stock there will be enough for all.

At a meeting of the trustees of the Missouri Botanical Garden and the directors of the Henry Shaw estate it was voted to establish the finest herbarium in the world, to cost \$500,000. The first step in the project took place last Friday, when an addition to the old Shaw mansion was started, to cost \$50,000.

Frank Fillmore has a fine lot of candidum lilies in bloom for Easter; also a large cut of fancy carnations and a fine stock of blooming plants.

The St. Clair Floral Company, Belleville, through its president, A. S. Halsted, reports that they will soon begin to build a few more houses and a large show house to be used as a salesroom. They will have in all, when the new addition is completed, 50,000 feet of glass.

Club Meeting.

The St. Louis Florists' Club held its regular meeting, Thursday afternoon, April 10, in its new meeting room, corner Eleventh and Loest streets, third floor, which is a large room and more centrally located than the old one, with plenty of space for exhibits of cut blooms. Fourteen members responded to the secretary's call, after which President W. C. Young opened the meeting. The members voted to hold the annual picnic in July, and the trustees were instructed, if possible, to have a boat excursion this year and bring in a report at the next meeting.

Quite a few discussions came up from the question box. The most interesting was on Easter stock. The growers present stated that everything was in good shape. Longiflorum lilies were about 30 per cent. diseased, but they thought there would be plenty for all. Other bulbous stock, they said, would be in some cases too far advanced, should this week be clear and warm. Before closing President Young remarked that he hoped those present would attend the May meeting and bring others with them; this gathering will take place May 11 in the new hall. ST. PATRICK.

The Bride, Bridesmaid, Golden Gate, Richmond, from 2 1/2 in. pots, \$2.00 per dozen; \$12.00 per 100; from 3 in. pots, \$2.50 per dozen; \$15.00 per 100.

OWN ROOTS

Killarney, 2 1/2 in. pots, \$1.00 per dozen; \$5.00 per 100. Richmond, Uncle John, Sunrise, Sunset, Kaiserin, Pres. Carnot, from 2 1/2 in. pots, \$5.00 per 100. Bride, Bridesmaid, Golden Gate, from 2 1/2 in. pots, \$4.00 per 100.

MISCELLANEOUS

Table listing miscellaneous plants and prices. Includes Ageratum, Cope's Pet, White Cup, P. Pauline, S. Gurney, L. Bonnett, Achyranthus, Ampelopsis Veitchii, etc.

WOOD BROTHERS, Fishkill, N. Y.

CYCLAMEN

Splendens Giganteum Hybrids. Finest strain in the world, perfect flowers of Giant type in five true colors, twice transplanted from flats, \$3.00 per 100, \$25.00 per 1000; plants from 2 1/2 in. pots, \$5.00 per 100, \$45.00 per 1000.

CANNAS

Alphonse Boovier, Florenee Vaughan, Chas. Henderson, Chicago, Papa, Egan-dale, J. D. Cabos, Queen Charlotte from 3 in. pots, \$4.50 per 100, \$40.00 per 1000.

GERANIUMS

S. A. Nutt, John Doyle, Castellane, Beaute Poltevine, E. G. Hill, Mme. Lindrey, Mme. Jaulin, La Favorite, etc., first-class grown stock in bud and bloom, from 4 in. pots, \$6.00 per 100.

SATISFACTION GUARANTEED PAUL MADER, East Stroudsburg, Pa.

MOON VINES

2 1-2 in. pots, \$5.00 per 100

Godfrey Aschmann

Importer, Wholesale Grower and Shipper of Pot Plants

1012 Ontario Street, Philadelphia, Pa.

EASTER PLANTS

Table listing Easter plants and prices. Includes SPUREA Floribunda, Lilacs, Azaleas, Geraniums, and Asparagus.

B. F. BARR & CO. KEYSTONE NURSERIES, Lancaster, Pa.

FRINGED Double Petunias

Fine plants, in bud and bloom, 4 in., \$5.00 per 100.

Table listing petunia varieties and prices. Includes SINGLE PETUNIAS, VINCA variegated, GAZANIA Splendens, ASPARAGUS, SALVIA, GERANIUMS, MOON VINE, DRACAENA Indivisa, SINGLE HOLLYHOCKS, DAHLIAS.

Cash with order, please GEO. J. HUGHES, Berlin, N. J.

BULBS AND AZALEAS

In the best of shape for Easter. Order now; will ship when you want them. AZALEAS, 5inc., 75c., \$1.00 each. TULIPS, all first size bulbs, in the best condition. La Reine, white shaded with rose; Artus, deep scarlet, very fine; Yellow Prince, yellow; Cottage Maid, pink striped with white, at 3c. a flower. Kaiserkroon, red and golden, bordered extra large, at 4c. The tulips run from 4 to 8 in. a pot.

HYACINTHUS, rose, white, blue, pink and purple, first size, 12c. each; second size, 10c. each. Von Sion, 3c. per flower.

All of the above bulbs were potted in the Fall and not boxed.

S.A. PINKSTONE, 20-22 Philip St., UTICA, N. Y.

PANSIES

Brown's Extra Select Prize PANSIES, large, transplanted, field-grown plants, in bud, \$1.50 per 100; \$12.00 per 1000. Cash with order.

PETER BROWN, 124 Ruby Street, Lancaster, Pa.

FOUNDED IN 1888

Weekly Medium of Interchange for Florists, Nurserymen
Seedsmen and the Trade in General

Exclusively a Trade Paper.

Entered at New York Post Office as Second Class Matter.

Published every Saturday by the A. T. De La Mare Ptg. and Pub. Co., Ltd., Proprietors, 2, 4, 6 and 8 Duane Street, New York. A. T. De La Mare, president; Jas. H. Griffith, secretary; David Touzeau, treasurer; Alex. Wallace, editor. The address of the officers is the address of this paper.

P. O. Box 1697, NEW YORK. Telephone 3765-6 Beekman.

CHICAGO OFFICE: 4543 Cottage Grove Avenue.

ILLUSTRATIONS.

Electrotypes of the illustrations used in this paper can usually be supplied by the publishers. Price on application.

YEARLY SUBSCRIPTIONS.

United States and Mexico, \$1.00. Canada, \$2.00. Foreign countries in postal union, \$2.50. Payable in advance. Remit by express Money Order, Draft on New York, Post Office Money Order or Registered Letter.

The address label indicates the date when subscription expires and is our only receipt therefor.

REGISTERED CABLE ADDRESS:

Flores, New York.

ADVERTISING RATES.

One-half inch, 75c.; ¾-inch, \$1.00; 1-inch, \$1.25; special positions extra. Send for Rate Card showing discount of 10c., 15c., 25c., or 35c., per inch on continuous advertising. For rates on Wants, etc., see column for Classified Advertisements.

THE NATIONAL FLOWER SHOW, under the auspices of the S. A. F. O. H., will be held at Chicago, November 6 to 15, 1908. William F. Kasting, Buffalo, N. Y., is chairman of the show committee.

PUBLICATIONS RECEIVED.

EVERGREENS, THEIR USES AND CULTURE is the title of Bulletin 190 of the Ohio Agricultural Experiment Station, prepared by W. J. Green and W. Emerson Bontrager. The bulletin is illustrated, and the following is the summary of the authors:

Because of their enduring foliage, evergreens should be more extensively planted about country homes, whether used in straight-row windbreaks or mingled informally with other trees on the lawn. From the ornamental standpoint, they abound in rich, dark shades of green, equally valuable as a background for deciduous trees or flowering shrubs and plants.

The finest of the larger ornamental evergreens are the white pine, Colorado blue spruce, white or silver fir, oriental spruce and American hemlock. Of the smaller ones none is better than Siberian, Hovey's Golden, pyramidal or globe Arbor vitae, thread-branched Japao cypress, graceful obtuse-leaved Japan cypress and plume-like Japan cypress.

The best evergreens bearing foliage in shades of yellow are George Peabody Arbor vitae, golden pea-fruited Japan cypress and golden plume-like Japan cypress.

In making an evergreen hedge use American hemlock or Siberian Arbor vitae.

For specimens to be shorn into fanciful shapes, use common red cedar, blue-tinted cedar or any Arbor vitae.

As a protection to farm buildings, the barn-yard, or poultry run, a good windbreak will repay its cost in a few years in the saving of fuel or feed. The length of time consumed in its growth need not deter anyone from making a windbreak, as results may be secured in half a dozen years by planting thickly, subsequent thinning to be practiced. For the construction of windbreaks and shelter belts the white pine, Norway spruce, Austrian and Scotch pines and American Arbor vitae have no superior. These kinds all grow rapidly and are not lacking in vigor or adaptability to thin soils, exposed situations and other adverse conditions.

It is hoped that no reader will so misconstrue any part of this publication as to plant evergreens exclusively about the home. Deciduous trees occupy a place in any scheme for beautifying lawns which conifers alone do not and cannot fill. When surrounded and completely enveloped in a dense growth of evergreens, a state of planting somewhat prevalent a few decades ago and of which examples are even now occasionally seen, a residence becomes dark, gloomy, damp and dangerous to health.

THE USE OF HYDROCYANIC ACID GAS FOR FUMIGATING GREENHOUSES AND COLD FRAMES.—The United States Department of Agriculture, Bureau of Entomology, has just issued a revised edition of Circular No. 37, prepared by Professor Albert P. Woods, dealing with this subject.

Advertising.

In this week's number considerable space is devoted to the very important subject of advertising, that imperative factor in the conduct of the business of every progressive merchant to-day. The matter is discussed by Robert Pyle, president of the Conard & Jones Company, West Grove, Pa., who delivered a paper on the subject before the Philadelphia Florists' Club at its meeting last week. Mr. Pyle's remarks, which apply particularly to the side of the question as affecting the advertising of a mail order house, are also full of "meat" for the general trade advertiser. His comments have been supplemented by some views of our Mr. De La Mare on the subject from the standpoint of the publisher of a horticultural trade paper.

We are very pleased, indeed, that the Philadelphia Florists' Club has presented an opportunity for the exploitation of the advertising proposition. It is one that does not, we think, receive the attention demanded by its importance from our respective organizations, both national and local; and a discussion of it, viewed from every standpoint, is just as essential to the welfare of the business as the other trade problems dealt with by our societies and clubs, some of which have reached the point of threadbare treatment.

and fair test. Bear in mind that cheapness of rate and fanfare in any periodical, while they may attract, are never the factors that make for the stability or satisfaction of its business bringing qualities.

Hydrangea Arborescens "Grandiflora"

While the subject of this hydrangea was under discussion we submitted to Dr. N. L. Britton, Director of the New York Botanical Garden, several documents and illustrations bearing on the question, with a view to obtaining his opinion of the matter. The subjoined letter has been received from Mr. George V. Nash, head gardener at the Garden, which we feel sure will be read with interest.

Editor Florists' Exchange:

Your letter of February 28 came during the absence of Dr. Britton, and has been handed to me for attention. I have not been able to take the matter up before this, as the rush of Spring work has kept me exceedingly busy out of doors.

In reply to your main question, I would say that we do not seem to have in our herbarium a single specimen exactly matching the *Hydrangea arborescens grandiflora* Rehder. This form, as I understand it from the descriptions and from the picture you send, is the normal plant with the flowers all sterile, and with the leaf-blades cordate. As you know, this matter of sterile flowers in the genus *Hydrangea* is a very uncertain character, varying in different specimens of the same species, and even in different flower clusters on the same plant. Botanically it is of little use, for I find specimens in the herbarium here varying from flower clusters with all fertile flowers to others in which there is quite a showing of sterile ones. One specimen collected in Georgia by our Mr. Wilson very closely approaches the form described by Mr. Rehder, in having broad cordate leaves and the inflorescence with a considerable number of sterile flowers measuring about 2 cm. in diameter.

The two forms of *Hydrangea arborescens* referred to by Professor Sargent are well represented in our herbarium, but the leaf shape varies considerably even on the same specimen, and I doubt if the shape of the leaves alone is a character of any value from a botanical standpoint. From the horticulturist's point of view, however, a form of this plant with broad cordate leaves and with large clusters of sterile flowers, and with a flowering period said to extend from June to August, would be a desirable acquisition.

The variety *sterilis* of Torrey and Gray, judging from Mr. Rehder's remarks, is the narrow-leaved form of this species with small sterile flowers. Botanically, I think this name would have to include also the forma *grandiflora* of Rehder, for the shape of the leaves and the number of sterile flowers in an inflorescence are far too unstable to make use of. Horticulturally, however, I think these forms are well differentiated, and I cannot find that there is an older name for the form with broad cordate leaves and large sterile flowers, so that Mr. Rehder's name is the one we should use in our horticultural writings.

Geo. V. Nash.

New York Botanical Garden, April 8, 1908.

Major Wm. P. Stead.

We have pleasure in presenting herewith an excellent portrait of Major Wm. P. Stead, florist and seedsman, 277 Broadway, Ozon Park, L. I.

When the Civil War broke out Major Stead was a drummer in the band of the Eighth N. Y. I. M. He then enlisted in the Fifty-first New York Volunteers for three years, or during the War. He was captured at Anderson Gap, Ga., October 8, 1863, and taken to Libby Prison, Richmond, Va., being one of the officers who escaped from that prison through the tunnel on February 9, 1864. He was also an officer in the Seventeenth U. S. R. from 1868 until 1882. In the latter part of the war the Major was employed as a spy or scout, and was known as the "singing scout" and "scout of the Wilderness." He was then under General U. S. Grant and General A. Burnside, attached to the Seventy-first New York Volunteers.

The Major was twenty-four years old when he went to the war, and is now seventy-three. He was married twice and has two daughters living by his first wife. He is now engaged in the more peaceful occupation of florist and seedsman, and still enjoys good health.

Society of American Florists and Ornamental Horticulturists.

Notice of Change of Registered Name of Rose.

The Waban Rose Conservatories of Natick, Mass., make application to have the name of their rose previously registered as White Killarney changed to Mavourneen. Public notice is hereby given of this application and any persons objecting to this proposed change of name or knowing of any reasons why the name should not be changed as above, are requested to forward a statement of their objections to the undersigned at once.

No objection being received within twenty days of this date, a change in registry will be made.

W. N. Rupp, Secretary.

Major William P. Stead

The demands made upon the craftsman these days, so far as advertising is concerned, are such as to tax not only his temper but his greatest ingenuity, and to call forth the exercise of much wisdom, so that he may plan profitably to himself. The pulling powers of any advertising medium are, of course, gauged by the results obtained; but under the haphazard system adopted by the large majority of trade advertisers, these results cannot be wholly and definitely determined. Too much is left to the purchaser, and not enough is done by the advertiser himself, to ascertain just whether he is losing or making money by advertising in any particular medium. We, therefore, recommend the suggestion of Mr. Pyle for the best consideration of all concerned—*key your advertisements*. This is a simple matter, and it will enable you to trace from what source your orders really come. Unless this is done systematically there is a chance that you are merely throwing away your money, for the busy buyer will more often than not fail to help you out of the difficulty by omitting altogether to name the medium in which he saw the advertisement; or, as has sometimes happened, giving the title of another medium in which your offerings never appeared.

Finally, devote as much care and attention to your advertising as you do to the other details of your business. These given, you are not as likely to lose money through this means of soliciting trade as you are when indiscriminate placing of your ads. is practiced. Results alone pay, and these can only be known after actual

Obituary

Ferdinand Bendt.

Ferdinand Bendt, a well-known florist of Newark, N. J., died in that city Saturday morning, April 11, of typhoid fever. He was 58 years old, and was born in Germany, coming to this country thirty years ago. A wife and a daughter, both of whom were also ill with typhoid, likewise succumbed to the fever, brought on, it is said, from eating infected oysters. A little daughter, eight years old, is the only one of the family left. She did not partake of the food that is alleged to have caused the death of the others.

Franklin Pierce Davis.

Colonel Franklin Pierce Davis, one of the most prominent men in Mobile, Ala., and widely known all over the State, died suddenly at his home in Summerville, a suburb, on the afternoon of Monday, April 6, death being due to indigestion. His sudden end followed only two weeks after that of his brother, J. Bradford Davis.

He was born in Mobile and for many years was manager of the Mobile Compress Company, later moving to Summerville where he engaged extensively in the florist business. He was an expert grower of the chrysanthemum, and contributed numerous articles on this subject to the technical press. He was also interested in the work of the Society of Southern Florists, and was one of the essayists at its last meeting. He was also a member of the S. A. F. O. H., and was appointed by President Traudly vice-president for Alabama, for 1908.

Colonel Davis had been conspicuous in military circles, having organized the local Lomax Rifles and was the first captain of that corps. He was twice married, and is survived by his second wife and seven children.

Funeral services were held at the late residence on April 7, the body being interred in Magnolia Cemetery with military honors.

Harris H. Hayden.

The death of Harris H. Hayden at Philadelphia, Pa., on March 29 came as a great shock even to those who were in closest touch with him. Mr. Hayden had been ill for some weeks, but not until the Friday before his death did he yield to the persuasion of his friends and go to the hospital where he died.

At the time of his death Mr. Hayden was the vice-president of the National Florists' Board of Trade, New York, a position he assumed at his own request only a few weeks previous, having been for nearly five years its president. Though during the three years preceding his death he had had little to do with its active management, yet he always took a lively interest in its affairs and freely gave the benefit of his ripe experience and well-trained judgment to such problems as were referred to him for solution. Few would have guessed that he was in his sixty-fourth year; so young did he always seem. His enthusiasm was always boundless. He regarded obstacles only as stepping-stones toward achievement; and when the clouds of disappointment and failure were blackest, he always saw the rainbow beyond them.

Early left a widower without children, he devoted his time and energy to religious work in New York City and Y. M. C. A. work throughout the State. He was a musician of no mean attainments and as a trainer of children in music he had few equals. He was, however, above all things else, a business man of the best type, keen, exact, conscientious, always trusted and honored. The world is a better place because he lived in it and is poorer now that he has left it.

OUR READERS' VIEWS

Uncle John Comforts Job.

Editor Florists' Exchange:

It is such a long time since I have had a chance to appear in the limelight that I must come to the aid of my very patient and long suffering friend, Job. I hope he won't die yet.

In the matter of the parentage of the carnation Mrs. Lawson, I didn't think I was in any way as much responsible as I am. Ansel T. Simmons sent out Tidal Wave and Daybreak carnations, and if it had not been for me the chances are there would have been either of Mrs. Lawson's parents (Van Leeuwen, whether mother or father, as presented, never ought to appear in the legitimate parentage). Maybe soon it will be necessary to have records of births. Anyhow, Mr. Editor, tell Job to keep before him the motto Nil desperandum.

It seems to me John Birnie is shy. John Young is not, because when I saw him last week at the rose show here he greeted me with, "How is your fat friend?" I

thought he meant Traudly; instead he meant Ed. Lonsdale, whom I have not seen for years. Still the same good spirit of friendship prevails, fat or lean, old or young. As Ever, Your Uncle JOHN THORPE, Chicago.

Carnation Van Leeuwen.

Editor Florists' Exchange

I observe that Robert Craig says carnation Van Leeuwen is "Tidal Wave re-named." Underrated I give you the true story of the Van Leeuwen carnation:

In 1887 I ordered a collection of bedding plants from Geneva, N. Y., with which to start a small business in Garfield, N. J. Among this collection I found twelve Tidal Wave and twelve Silver Spray carnations. These two carnations are the parents of the Van Leeuwen.

In regard to the Mrs. Thomas W. Lawson carnation, I had a variety similar to this one long before the Lawson was sold for "\$30,000." Mine was a sport from Van Leeuwen, and for that reason I never believed the Lawson a hybrid, but a sport, and it seems to be a variety very much given to "sporting"; I even had a striped one. I am of opinion that all the Lawson sports have come from Van Leeuwen.

Van Leeuwen was the only carnation in its day that had stems from 18 to 20 inches in length; the stems of Tidal Wave were only from six to eight inches long.

Montague say "No man is fit to be making foolish things, but the worst of it is, when a man studies to play the fool."

That description of your correspondent's handshake with the President of the United States, is, to me, shrouded in mystery. I hope Birnie was clothed and in his right mind when he made that visit to the White House?

Too bad that that "Eastern representative of a Western paper," should cast the indignity of being a book canvasser on Birnie. I am too lazy to do his own soliciting? I hope John is now canvassing for a periodical "untrammelled by individual prejudices," etc., or for one that "appeals only to the intelligent and intellectual" members of the craft. But why should I doubt the latter deduction, seeing Birnie's charitable work is to be carried on in Hoboken!

I observe Robert Craig takes exception to my remarks on the parentage of carnation Mrs. Thomas W. Lawson, and states that "Van Leeuwen was simply Tidal Wave re-named, which fact was known to many growers." I never have seen or heard that statement put forth previously by any one. Nor has the originator of Mrs. Lawson, as far as my knowledge goes, ever questioned the announcement, made several times in public print, that Lawson was the result of a cross between Daybreak and Van Leeuwen, he, evidently, being willing to accept this

Queen Wilhelmina and Prince Henry of Holland at Nurseries of J. Blaauw & Co., Boskoop, March 29, 1908. The Queen is accompanied by J. H. Van Nes and the Prince by J. Blaauw.

The price paid for Van Leeuwen went as high as \$7.75 per 100. This statement will be corroborated by John Young and J. K. Allen, commission merchants of New York City.

I intend to build a greenhouse, and will try again to produce a Van Leeuwen carnation, No. 2. Woonsocket, R. I. A. VAN LEEUWEN, SR.

Reflections on Current Topics.

MR. EDITOR.—By your issue of April 11—and here let me compliment you on its fine, healthy appearance—I notice that I am "getting it" from all sides. Three flagellations in one number! And yet my good friend, John Birnie, accuses me of being a "back number," and wantonly asserts that my "trenchant pen has lost its point," besides making other unkind remarks about my last effusion. Now, Sir, I am patting myself on the back that Birnie should have felt the sharpness of that pen point so keenly as to come out of his Jersey retreat and furnish your readers that interesting account of his Washington trip and of other matters.

I agree with Brother Birnie that "muckrake" speeches and "doggerel" verses are out of place at such enjoyable, fraternal affairs as club banquets. I read a brief account of the famous speech, delivered, it was said, in the orator's "usual eloquent and graceful manner." The Chesterfieldian speechifier, I observe, "urged the need for a 'press' devoted to the welfare of all departments, untrammelled by individual prejudices or business interests, and quoted from some verses read by him five years ago." These statements were, to me, quite "educational." First, they demonstrated that it was possible for a disgruntled individual to mitigate the factor that furnishes him a means of livelihood. Secondly, it is clear that the fountain of "doggerel" verse is now dry, thank goodness; and that repetition of the "disgusting" effusions must be resorted to. However, I firmly believe the "press" and those responsible for its conduct will, with regard to the criticism, "just look where it comes from," as the Irishman said when the jackass kicked him. As

latter name which Mr. Craig now calls a synonym of Tidal Wave.

I have departed from my usual practice and, like that other controversialist, W. N. Craig, have looked up the "authorities" in this instance. I find that Dr. L. L. Lamborn, the venerable author of "Carnation Culture," comments on the variety "Van Leeuwen" as follows:

"This is a seedling of Tidal Wave and has the same color, but is altogether different in its habit. The flowers are larger, the central petals are long, erect, giving the flower a conical contour; the flowers I received were three inches in diameter by measurement. In its habit of growth it would be grouped with Daybreak, but the canes are somewhat stiffer and more erect. It has the marks of being as inflorescent as its parent." This was written in 1884.

I cannot discover that the Doctor's "diagnosis" has ever been challenged, and should like to be referred to authoritative statements other than Mr. Craig's, substantiating the latter's contention. This seems like a case of the application of the significant query, "Who shall decide when doctors disagree?" However, it is worth while to ascertain the correct parentage of a carnation which has been the progenitor of some of the best kinds ever put on the American market. Perhaps Peter Fisher can solve the problem for us.

In regard to Mr. Bonnyman's criticism, I would just remark that I "quoted correctly" the paragraph with which he finds fault. It was not my own (probably too good to be that); and I always believe in giving credit where it belongs—something uncommon these days with "bemasked, skulking" and other "scribblers"; especially those who write "cultural directions" for the trade papers. I am, however, quite willing to accept Mr. Bonnyman's confident assertion that "David was dead probably 300 years before the Prophet who foretold the overthrow of Assyria was born." Nahum must have been a about contemporary with myself; and it is therefore strange that I should have overlooked the fact that David lived before our day. Another instance of "cultural and mental decrepitude" leading into misconception or error, patriarchs like John Birnie and Job.

Advertising.

Read by Robert Pyle, President of the Conard & Jones Company, West Grove, Pa., before the Philadelphia Florists' Club, Tuesday, April 7, 1908.

Philadelphia is the home of one of the largest if not the largest advertising agency in the world. Some twenty-five years ago one of the leading men of that firm and easily one of the most prominent advertising men in the country to-day, used to say after laying out an advertising campaign with one of their clients: "Well, now, as to results, you know and I know that neither one of us knows anything about it." But in spite of the chances they found they were taking as to the outcome Mr. McKinney and the man with whom he was working continued year after year to turn over to the printer and publisher in hard, cold cash approximately three times the amount of the net profits of the preceding year of that particular firm, and gradually and steadily built up a business reputation and confidence in the name of that firm which is now known in every flower growing country on earth. It is the printing press and the post office that has made such conquests possible.

What Advertising Is.

For our purpose to-night advertising may be said to be "applied salesmanship" with the possibility of sales multiplied to the "Nth" power, but the printed sheet is by no means the only medium. Heinz with his 57 varieties built a big pier at Atlantic City and I have no doubt as an advertising move it pays him well. P. T. Barnum during the height of his fame as a circus manager, upon coming to one of the largest cities, is said to have rented a small plot of ground adjoining the tracks of a leading railroad which carried thousands of passengers every day to and from the city. He set an elephant to work ploughing that field with a man from Ceylon as a driver. You can readily imagine the interest that such a spectacle would create. People talk about and papers print the novel thing which interests them, and the amount of free publicity that Mr. Barnum obtained would be difficult to estimate.

Looking at it broadly, advertising is publicity—telling other people something about which you want them to know, influencing them to think of you and to desire the thing you have to sell, whether it be pickles or seats at the circus, professional services or Easter lilies. But, to-night, of course, we are most interested in floricultural and horticultural advertising.

Horticultural Advertising.

Flowers, trees, seeds, and bulbs are the things we have to sell and right here comes a distinction; at least I would like to make the following perhaps arbitrary distinction for the more convenient handling of my subject. Some of us are growers, some are commission men, and some cater to the general public, and naturally we have a different selling proposition in each case. To the former the trade papers are the media of vital interest (more about them later). The rest of us, including, we'll say, the seedsmen, nurserymen and general catalogue men, have learned that we must depend upon advertising for our bread and butter.

Because of the very nature of the case the advertising carried on by these men is perhaps as broad and general as that done by any class of men in the plant business. Perhaps, therefore, it would be worth our while to go into the office of one of these firms and watch them laying plans for next season's campaign.

Planning a Season's Campaign.

The conditions which the advertising man has to face are these: As buyers he has all sorts and conditions of men and women; they are located all over the country—the product which he has to sell includes all kinds of plants, trees, etc., used to beautify the surroundings of the average American home. (Please note here the use of the word "average," cutting out that class of homes which look to the landscape architect for their advice. The average American, we believe, depends upon the florist's catalogue as a rule, and, in the main, upon the magazines which he gets treating of this subject to give him the information necessary for the decorating of his grounds.)

Making the Catalogue.

The first and indispensable thing for a salesman to consider is his catalogue, or primarily a list of the things he has for sale with the prices thereof. But the successful catalogue man knows that bare lists and prices themselves will bring very little business; therefore, he devotes time and earnest effort and spares no expense to arrange, amplify, and beautify his catalogue. He will take care to have the plants properly classified, to have them carefully and accurately described, and also to include if possible directions for their culture, until it becomes a veritable encyclopedia of the things listed. He also engages the services of the best artists, will have his own photographic department, or go where he can to get illustrations that will speak louder than words

and make his catalogue vie with the modern magazine in rare attractiveness.

In making up a catalogue we think it is always well to bear in mind the attitude of the men or the women who will read it. Amateurs as a rule want to know and are glad to be shown; of course, there are some women who will read a catalogue from cover to cover no matter how long the descriptions; but the general tendency, and a good one, is to cut down these long descriptions and to insert in a clear, readable, well-arranged manner only such things as would stand the test of actual usefulness and give an accurate picture to the prospective purchaser of the thing he is asked to buy. There are many other details that might be treated of, for which there is not room here, as regards the size of the catalogue page, the number and kind of illustrations, special offers, bargains, etc.

English vs. American Catalogues.

Before leaving the subject we would like to call attention to the fact that the English florist of to-day is ahead of his American brother, as evidenced by the splendid specimens of catalogue-making which they furnish patrons, not only as regards fine paper, beautiful illustrations, but the comprehensive textbook-like treatment of the subjects listed make them really delightfully entertaining in every way; and if the high prices which

Robert Pyle

they seem able to get is any criterion, we believe they must be good pieces of advertising.

We have here a sample of one of the English catalogues, nearly 400 pages, heavy plate paper, exquisitely executed color work, weight 2½ pounds in the mails. They must have cost more than \$1 apiece.

The catalogues issued in our country average in price from one cent to 35 cents each in the mail bag. There are a great many houses publishing about one hundred thousand books; very few approach the million per year edition. The number needed depends, of course, upon the number of regular customers (as we call those who order intermittently year after year), plus the number of new names that may be obtained in one way or another, so that right here comes the next point for the advertising man to consider in laying out his campaign—*how many new names will he get?*

The answer which almost immediately follows is, *How much money have you got to spend?* This question is more easily answered when some plan of operation has been arrived at. How shall we go about it to get new customers—a problem more fascinating than a game of chess, most uncertain as regards the outcome, but often bringing rich rewards.

Reaching the Public.

How shall we reach the general public? To a man with a small place doing a local business that problem would be a comparatively simple one. He would probably put up a sign, make his place look as attractive as possible, using the local papers and sending out to his list of customers attractive bits of advertising literature at proper intervals. Of course, this is but a mere outline of what he might do. But our general catalogue man is catering to a very scattered public with wonder-

fully diversified interests. Living under multifarious conditions of climate and environment he must catch their eye and gain their attention long enough to impress them.

The Media to Use.

One of the first things to consider, therefore, is what media shall be used; and the second thing is *what kind of a proposition* will be circulated through these media. It is very much like sowing seed. Good seed in poor ground is not much better than poor seed in good ground; both must be good to form a successful combination. Let us, therefore, first consider the soil, or the media.

Judging from the way he spends his advertising appropriation the average seed and plant advertiser has in the past plainly found it most profitable to use the magazines and some other periodicals, giving little attention to either bill-board, street car or other such forms of advertising. First in the list are the papers which hold for him somewhat the same place as the trade papers do for the wholesaler and the commission man. I refer to the garden magazines with which you are all familiar. The Garden Magazine, Suburban Life and Floral Life are all good; Country Life in America is an unique proposition. Next after this class we would name the women's publications, McCall's Magazine for example, Good Housekeeping, and many others in a like class which seem to appeal as particularly helpful to the women who "do things." Of course, there is a long list, important among which are the farm publications, with the Farm Journal a good leader; some which will "win out" on certain propositions and "fall down" on others, and this leads us to another very important matter, that of

Tracing Results from Advertising.

We understand that Burpee depends upon a certain proportion of the people answering his advertisements stating in what periodical they saw the advertisement, and in that way learns which ones pay best.

Where possible we believe it pays to key every advertisement and check the returns. We have here a schedule showing the number of orders received and the cost per order and cost per reply to a certain list of papers from a certain proposition for a certain period of years, and you can readily understand how helpful is this schedule in selecting media for future advertising.

Space.

The next question perhaps will be, *How much space shall we use?* Does it pay to use a large space in a few media or a small space in a great many? Will it pay better to spend \$4,000 on putting an advertisement on the back cover of the Ladies' Home Journal, for example, or to use the same amount of money in buying full-page space in four of the leading monthly magazines? Of course, these are extreme cases, but the same principle applies, and it is no easy matter to decide questions of this kind. We believe it pays to take sufficient space to very certainly catch the attention of the woman who is not likely to be interested, and to take that space in the magazines of good standing and large known circulation, and which you know reach the class of people for whom you are making a bid.

Copy.

The question of copy is perhaps the most fascinating of all. We know of no easier way to waste money than to buy space and to fill it but poorly. The first question to consider may be, *Will you advertise directly for orders or advertise for names?* Or, in other words, get people to send for your catalogue which can be depended upon to make the sales. Look through the advertising pages of any current magazine and we will find samples of every type. Templin, for example, offers a beautiful lace fern, free, tacking on the provision that four cents must be sent to pay cost of packing and postage; that four cents is a good foil to keep off mere curiosity seekers. It appeals to the people who want much for little; but the advertisement is well handled and also ought to appeal to the very best names. An advertisement of this kind will undoubtedly get circulation for the catalogue.

Another type you are sure to note is that of making a definite offer of a collection or a novelty. There is some risk as to whether or not such offers will pull, and this is the test for the man who writes the advertisement. Personally we have tried the free offer plan, and have secured thousands of names that have cost not more than a penny apiece. We have tried the second plan above referred to and have got some orders to cost us not less than \$4 apiece; but after we had counted up the cost of the catalogues sent on each particular proposition, had considered the returns from all the sales made, there was very little difference in the net result. Countless examples of this kind might be related, but all go to show that it is as important to consider the quality of the names thus secured as it is the cost to get them. Cyrus Curtis, head of the Ladies' Home Journal Company, once said that if he got back one-quarter of what he put into his advertisements he considered it was paying him very well indeed, and it took six figures to show the amount he was then expending each year.

Display in Advertising.

There are a few things that may be worth mentioning in connection with display in advertising. Some artists, or some advertisers, seem to have the knack of getting up an advertisement that will stand out strongly on the page. Some years back white on black advertisements were very much in evidence and still are distinctive when well done. You will remember the excellent advertising done by the greenhouse construction companies in the trade papers. What splendid taste is displayed—an attractive illustration, strong borders, white space and well selected and well arranged type, and best of all, good straight from the shoulder talk.

There is a characteristic style in the clean appearance of Burpee's advertising, from which for the most part illustrations are eliminated, except in the way of their trade mark or their green label.

When the "Uneda Biscuit" was coined for the National Biscuit Company, there was also adopted a particular style of letter, and from that day to this, whether on bill-board, box, or magazine, we think we are right in saying that that particular style of lettering has always been retained.

The Value of Repetition.

Advertisers have learned the value of repetition. "Water dropping day by day wears the hardest rock away." Repeated taps of the hammer will finally break the stone. There is a little "ad." that appears in the trade papers most pleasingly distinctive, and I daresay there is hardly a man in this room who is not perfectly familiar with the little label pictured in the firm name of the Leedle Floral Company. It is impossible for one to think of the advertisement of that firm without picturing in his mind the form of that little signature, which shines out boldly on the most crowded page.

A good trade mark can be hammered into the consciousness of the people you are trying to reach. With it, if it be strong enough, you can count upon gaining the attention of every passer-by every time he comes along, and very much oftener, and very much more surely, than if your "ad." was dressed up in the common garb of ordinary type.

Testimonials.

Testimonials, it seems to us, are worthy of mention, as being strong arguments in advertising. They are recovering from the violence done them by the patent medicine man. In the first place they come from disinterested, at least unprejudiced, persons, and in connection with catalogue work especially, if not with advertisements, they add conviction as to the pulling power of the thing advertised.

Free Reading Notices.

Many of you probably remember how at a large reception given to President Roosevelt in course of the naval review in New York harbor there was a certain flower that figured conspicuously in the decorations. Just how much John Lewis Childs is responsible for the *Gladiolus America* being used for the President's reception we know not, but it is very certain that the amount of free publicity gained through the press, as the result of this *gladiolus* being used, would have cost Mr. Childs many thousands of dollars if paid for at regular advertising rates.

Any one who has been reading the trade papers for the past few months has surely had impressed upon his mind the fact that there was a new *hydrangea* on the market. Because of the discussion over a name that *hydrangea* has been advertised so widely that it is almost as famous as the old *H. paniculata grandiflora*, yet our genial friend from Indiana, the famous introducer, we suppose, has not been charged a cent.

How to Succeed.

Some people are trying to believe that they are reducing the profession of advertising to a science. They claim certain conditions produce certain results, just as life insurance men have their mortality tables. The most successful advertisers, or the man entrusted with the expenditure of the largest sums of money, still advise, and wisely practice what they preach, as follows:

"Try out every scheme (no matter how promising it may appear on its face) thoroughly on a small scale. First tabulate results carefully; watch results and your correspondence, then shape your course accordingly."

Just one more thought I wish to leave with you. When you advertise, be ready to "deliver the goods." Do not disappoint, or your advertising campaign might just as well not have been.

Good stock at right prices, with prompt, courteous attention to customers, will win trade and create a confidence that will be hard to shake.

Again we repeat *hold your customers by good service*, because, after all, a satisfied customer is your best advertisement.

With the expenditure of a few thousand dollars it is possible to get a circulation that will bring your offer to the eyes of not less than ten million people, and it is a mighty good plan by which to cull from such an audience the names of those most likely to be interested in one's particular product.

At the conclusion of his paper Mr. Pyle mentioned

having asked the publishers of the various trade papers for their views regarding the class of advertising to which these papers are especially directed. He spoke in laudatory terms of the suggestions received from Mr. De La Mare of 'The Florists' Exchange, which, unfortunately, he had not brought with him, as he intended to read these as an addendum to his own paper. We give the views of Mr. De La Mare as follows:

A tremendously important topic on which countless papers have been written, and a fruitful subject for the speaker and the writer in the ages yet to come.

Restricting our remarks mainly to the viewpoint of a trade paper:

Publicity is the lever that moves goods. Publicity is most quickly obtained through advertising, and the trade paper is the tradesman's most natural medium through which this desired publicity is to be had. Advertising has no far-reaching success to the person who fails in the following essentials:

Well-grown stock.

Prices right.

Answering all correspondence promptly.

Exercising the closest personal supervision (or through a trustworthy deputy) on all goods shipped.

The most short-lived advertiser is he who endeavors to palm off poor stock; the long-lived advertiser is he who makes it as certain as can be that his first sale is to be a satisfactory deal. This is the process of reinsuring your advertisement. A reputation for honesty and fair dealing is the advertiser's biggest asset.

A clever advertiser may gull and deceive the general public through his misrepresentations for a long time for the reason that he uses as his media newspapers and magazines covering every class and condition of people, and that there are thousands and tens of thousands of these who, apparently, love nothing better than to be deceived—that is to say, they take delight in reading the spacious advertisement offering something for next door to nothing; and yet, when they are sending in their money they have an inward feeling that the thing is too good to be true. In a trade paper these conditions are the reverse. The advertiser is speaking to men who know, and there is naturally but a small proportion of the credulous in each trade; here he gets short-shrift, particularly in the florists' trade papers, the reason being that florists are a fairly traveled class and much inter-acquainted, and no representative trade paper will countenance fraud; it cannot afford to.

THE SEEDSMAN.—The most mature advertiser in our line is the seedsman—his main audience the public. Why this should be so: Force of education and environment and the larger field—the entire country and all the people in it. To obtain publicity the seedsman uses catalogues, all the way from one to five or six each year, traveling salesmen, circulars, the newspapers, the magazines; the trade papers in a broad sense he passes by. Shall we say that his education is incomplete for that reason; or, has he better methods of reaching the trade or doesn't want the trade? It all depends. There are two principal classes of seedsmen, the one class dealing with the trade and the public, the other selling to the public only. This latter class, therefore, have no concern in a trade paper, as advertisers, although they probably are considerably interested in other people's advertisements, as buyers.

NURSERYMEN.—Equally as wide-awake a class—but little interested in the florists' trade papers, save those who handle ornamental trees, shrubs and perennials. There are big openings for the nurseryman who will undertake to grow in quantities the specialties that florists can handle to advantage, and we may expect to see, within a reasonable time, this new class come to the front as heavy advertisers. The money is in it for those who know how to grow as well as how to advertise.

FLORISTS.—Now, we are interested. Including retailers, we have 15,000 strong, perhaps more; of the retailers, after we sift out the irresponsible, migratory small fry, we find a comfortable remainder of solid, substantial, progressive men, most of whom use advertising in a desultory fashion, with no fixed or set rules for their guidance. Their clientele is the public, and there is a large field open for their advancement through concentrated, intelligent and persistent advertising effort. The keen retailer will keep his eye on the grower's advertisement.

The commission men, especially those of the West, are among the keenest of trade paper advertisers. These appear to recognize to the full the necessity for trade publicity, and they find their greatest opportunities of publicity through the trade papers.

THE GROWERS.—The vast army of responsible, hard-working men, the body that is accountable for the bringing into life and the development of the trade paper. Without their support the trade paper

would be a small affair, yet without an outlet the number of growers at the liberal figure of 3,000, there are only about 200 who advertise continually all the year around, and possibly not more than 500 or 1 in 18, who patronize the trade paper out of the "help wanted" columns. In this class of worthy workers the grower in the trade paper is the most vitally interested, because they contribute its life, bone and sinew, meat and drink, and to those who give so much and so freely, much is due. The persistent advertisers in this class know their advertising ropes pretty thoroughly and need very little prompting. Because they are successful business men they are successful advertisers. The two qualities travel hand in hand. Success makes success.

It is, therefore, to the intermittent grower advertiser, and to the grower who advertises not at all, that the talk should be directed, while rendering full tribute to him in the trade whose experience has made of him a successful advertiser.

Some of the pointers to the inexperienced florist advertiser would read about thusly:

You can build up a good, and perhaps a prosperous, business through growing some specialty for the market direct without advertising—and that's about as far as you can go without general publicity.

If your trade is wholesale, you must use the trade paper, the catalogue, and the traveler; the latter as soon as you can afford him. Spend the most money on whichever of the above experience and the story of your books proves is bringing you in the best returns in proportion to outlay.

If you cater to a retail trade, use the many avenues open to you for obtaining the desired publicity. The first step is to make your home grounds the most attractive place in all the neighborhood. Be on the best of terms with the publisher of your local paper; here, an occasional gift of a plant or a few flowers will go a long way, but don't omit to also advertise in his paper. Use neat stationery; it need not necessarily be expensive. Keep your store as well as your grounds clean, bright and wholesome. Issue a circular (not a poster) and price list, or some other attractive novelty, at least once a month; never lose sight of the price list section, and work in at least one reasonable bargain offer each time. Revise and constantly extend the list of names of possible buyers in your vicinity. Spend the half of your profits in advertising. Keep it up; go at it just as systematically as you plan and work out the fruition of your crops. Bear in mind always that "judicious advertising pays"—the hit or miss system is waste of money. Follow up persistently every gain you make. Be courteous, prompt, attentive; don't despise the very small order of the man or woman flower-lover who is poor; some day they may be better off—and they have their friends. Lay your advertising foundation deep and firm; the habit once formed will endure, become easy, and the future will take care of itself. Persistent judicious advertising is money out at compound interest.

SELECTING A MEDIUM.—This is not a particularly difficult matter, yet, because of much indiscriminate advertising, considerable money is mis-spent. Try all the advertising media at command; give each a long enough test to discover its business bringing qualities, then discard all such as fail to reimburse you for your outlay. Advertising is purely a business proposition, and sentiment never enters into its operations. Charity is an excellent thing, but it should be bestowed quite outside of all business matters. Never remain under the belief that you are compelled to patronize every paper that solicits your business; this is an erroneous and profitless plan. And never accept fully and without the proverbial grain of salt the claims made either by advertising solicitors or the papers that employ them. Test the statements for yourself, and then shape your course, by the results obtained, accordingly.

A choice collection of Don'ts could be appended to all this, but the only Don't we will make use of is this: If you don't want to better yourself, don't pay any attention whatsoever to any of our suggestions.

POLYANTHA ROSE APPLE BLOOM FOR FORCING.—We learn from German and American gardening journals of the readiness with which polyantha rose Apple Bloom lends itself to forcing. As a seedling from Madame Norbert Levavasseur, the variety possesses all the properties of the parent excepting perhaps the foliage is less robust or coarse. The lighter foliage, and graceful growth and habit of the forced plant, and the pretty rose-colored fragrant blooms have a charming effect. Plants worked on stocks the previous year, and grown on in pots, and forced the following Winter, and by no means of any great strength, had three flowering shoots. While mildly attacks other polyanthas indiscriminately, Apple Bloom suffers least of any, and in the case of this variety, is grown out of doors, and then potted up, the results are considerably more favorable. —Horticultural Journal, Eng.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

Albany, N. Y.

EYBES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Boston, Mass.

WAX BROS., 143 Tremont St. Orders for New England States receive our careful attention. We are located in the theatre and shopping district. Telegraph and mail orders solicited. Satisfaction Guaranteed. Established twenty years.

Brooklyn, N. Y.

ROBERT G. WILSON, Fulton Street and Greene Avenue. Deliveries anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders well cared for from all parts of the country, and delivered at Theatre, Hotel, Steamer or Residence. Telephones: Prospect 2840 and 4065.

Chicago, Ill.

HAUSWIERTH, The Auditorium Florist, 232 Michigan Avenue. The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

Dayton, O.

W. G. MATTHEWS, FLORIST, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Denver, Colo.

THE PARK FLORAL CO., 1706 Broadway, J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Indianapolis, Ind.

BERTERMANN BROS. CO. Our facilities for executing orders in an efficient manner are unexcelled. Our shipping territory includes the surrounding states. High grade flowers; expert workmanship.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of seasonable flowers always in stock; delivery facilities perfect.

New York.

YOUNG & NUGENT, 42 West 38th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYEE, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

Retailers desiring a share of out-of-town trade should be represented by a card in this column.

FOR THE RETAILER

[All questions relating to the Retail Trade will be cheerfully answered in this column. We solicit good, sharp photographs of made-up work, decorations, store interiors, etc., for reproduction here.—Ed. F. E.]

Funeral Work at Indianapolis.

The accompanying illustration shows funeral designs recently executed by several of the Indianapolis florists. The background and arrangement of the designs, as shown in the picture, were done by Bertermann Brothers Company. From \$1,200 to \$1,500 was the value of the flowers used.

Our London Letter.

BY A. HEMSLEY.

THE WINTER-FLOWERING CARNATION SOCIETY held a most successful meeting at the Royal Horticultural Society's hall on April 1. The general public, judging from the large attendance of visitors, take great interest in the doings of the society. It was a little disappointing to find so few novelties. We have been promised some good things, and I have seen seedlings at several nurseries, but up till now the stock has not been worked up sufficiently, or the blooms have not been in the best condition just at the right time. Marmion, from Mr. Burnett, which has previously been shown and described, was given a first-class certificate. It is certainly a fine variety and good flowers of it have been shown several times during the past Winter. Mikado from the same grower was given an award of merit. This is of a peculiar shade of heliotrope purple. The only other novelty submitted was a scarlet, but some doubt was expressed as to its being a good Winter bloomer.

Burnett, Red Lawson, Beacon, Britannia, Aristocrat. This latter sort varied a little in color, but the blooms were of good form. My Maryland, though not in the vase classes, was well shown in the mixed groups.

On the evening of the show the annual dinner and general meeting were held. Some alterations in the rules were made. In the first place the title of the society was altered to "The Perpetual-Flowering Carnation Society," and other slight alterations were made. The most important matter under consideration was the registration of new varieties. A code of rules was submitted and with a few slight alterations the rules were adopted. It was agreed that the American Carnation Society's names should be given priority if in the case of sports they are registered on your side first.

The report and balance sheet showed that the society is making headway, there being a considerable increase in membership, and all the shows held have been most successful.

THE PHILIPPINE LILY.—The Cushman Gladiolus Company, Sylvania, O., has been making extensive trials of this lily for Summer garden culture and finds it highly suitable for this purpose. The firm writes as under to the Rural New Yorker, relative to the outdoor treatment of the bulbs:

"In the garden or border no lily is easier to grow. Select a place in full sunshine, if possible, away from trees or tall plants that might take the moisture and light. Plant in May not less than four inches deep in loose, mellow soil. Beware of fresh manure or acid fertilizer. Give plenty of water when growing; in their native mountains they are deluged nearly every day during the growing season. In cutting the flower be sure to leave enough foliage to develop and ripen the bulb. When the foliage ripens in October, dig the bulbs and store in dry sand or earth. With a light mulch the bulbs seem fairly hardy, but they are so easily kept in sand that it seems advisable to lift and store during Winter."

Funeral Work at Indianapolis, Ind.

Taking the flowers shown in the various classes, for vases of 36 blooms H. Lancashire was first in white with White Perfection. Mr. Wallace, Dunstable, came a good second with Lady Bountiful; and this variety came first in another class, being well shown by Messrs. Bell & Sheldon, Guernsey.

In the class for bluish there was nothing to compete against Enchantress.

For pink Mr. Dutton showed Winsor in fine form. For deep pink Mrs. T. W. Lawson was the variety securing first in one class, and in another class Nelson Fisher carried off first honors. For crimson President proved the best variety. In scarlet Robert Craig came first, and a vase of this variety secured a special prize offered for the best vase of blooms of any color.

The most interesting feature of the show was formed by the large collections from trade growers, the chief exhibitors being Messrs. H. Burnett, Guernsey; Low & Company, Enfield; W. H. Page, Hampton; C. F. Waters, Balcombe. Gold medals were awarded to each of these firms; and silver gilt medals to Messrs. A. F. Dutton, Ivor; Bell & Sheldon, Guernsey; and Morris & Company, Guernsey. Silver medals were given to Messrs. C. Engelmann, Saffron Walden; and G. Lange, Hampton.

Of varieties specially worthy of note Rose Pink Enchantress certainly one of the best—and Mrs. H.

Dr. Van Fleet adds the following interesting particulars: "The Philippine Lily is native to the Island of Luzon, Philippine Archipelago, where it grows abundantly on elevated plateaus, dry at one season and very rainy at others. The bulbs force well, but are not always easy to bring into bloom by Easter. Each produces from one to five immense trumpets, the longest and most elegantly formed of any in the genus. Bulbs and plants are healthy, and so far free from the disease that so frequently affects other white florists' lilies. This species, unlike most varieties of longiflorum, may repeatedly be forced for Winter bloom, appearing to gain vigor each season, if allowed to mature in a natural manner after flowering. Bulbs are now blooming in the Rural Grounds greenhouse that have been grown in pots three successive Winters, and are far larger and more vigorous than ever. We keep the pots in full sunlight after blooming, and water regularly, using occasionally very weak liquid manure or guano water. When the leaves all turn yellow we turn the pots on the side in a sheltered place, where they will not entirely dry out, and leave them until sharp frosts in November, when the bulbs are shaken out and repotted in fresh, clayey soil, stored in a cool cellar and brought into heat as wanted. The garden culture is a new idea, and as it appears entirely practicable, will doubtless greatly extend the popularity of this charming plant."

CLUB AND SOCIETY DOINGS

NEW YORK FLORISTS' CLUB. A well attended meeting of the club was held on Monday evening, April 13, in the former rooms in the Grand Opera House Building, Eighth avenue and Twenty-third street. Many expressions of gratification at assembling in this favorite meeting place were heard on all sides. President Weathered occupied the chair, and the first business of the evening was to thank the club room committee for its services in again securing these accommodations. The transportation and outing committees reported progress. The latter hopes to have the program ready for distribution at the next meeting.

A resolution was passed expressing appreciation of the work of the Department of Agriculture in behalf of the florist industry of America and helping toward the solution of problems confronting the trade, and especially thanking Professor Corbett for his interesting and instructive lecture on "Soils" delivered at the March meeting.

N. Shreiner and G. Henry Cathcart were elected to membership, and the following names were proposed: E. W. Leutz, W. L. Badgley, Anton Schultheis, Jr., T. E. Smith and C. M. Lynn. The resignations of Peter Devoy and Peter Fisher were received with regret.

President Weathered appointed the following as a committee to draw up resolutions on the death of Miss Dean, daughter of ex-President James Dean: Harry O. May, Alex. Wallace and Charles Lenker.

Quite a discussion ensued, participated in by Messrs. Wallace, Butterfield, Totty, Traendly, Young, Marshall and Lenker, on the articles that have appeared in the daily newspapers regarding the alleged cheap prices of Easter lilies this year, owing to the reputed large importations from Bermuda. It was stated that some of the retailers were already having difficulty with their customers because of these reports, and a suggestion was made that it might be well to counteract through the daily papers the statements, by a resolution of the club setting forth the actual facts in the case. The consensus of opinion, however, seemed to be that, as the prices for Easter plants generally had been reported by the newspapers as being very high in years past, having the tendency to drive customers away from the florist stores, the present report of cheap prices would have the opposite effect. The discussion resulted in the appointment of a press committee, consisting of Messrs. Wallace and Totty, whose province it will be to call in question any erroneous statements concerning the florist business that appear in the daily newspapers.

It was decided to hold a ladies' night on Wednesday evening, May 27, when W. E. Rickards and his committee will see to it that an enjoyable program is forthcoming.

Vice-President Marshall reported on bowling matters, and stated that the club had secured Thum's alleys, 1241 Broadway, where they will practice every Friday night at 8 o'clock. It was also mentioned that those intending to compete for the Traendly transportation prizes should be members in good standing of the Florists' Club as well as of the S. A. F. O. H.

President Traendly of the National Society gave an interesting account of his recent visit to Niagara Falls to attend the meeting of the Executive Board. He spoke of the excellent hotel accommodations and others provided for the trade exhibit and for an outdoor planting display, and was of the opinion that the educational part of the meeting would reach up to its usual high standard. Some prominent men in the business have promised papers, and J. Horace McFarland, chairman of the American Civic Association, will deliver an illustrated lecture. The Buffalo Florists' Club and the Niagara Falls people are doing their utmost to make the convention a great success.

Mr. Traendly also spoke of the forthcoming national flower show. There was, he said, no question about its being one of the greatest things ever attempted in the florist business anywhere. Already several European firms have promised to make displays. He believed the Western growers would put up a fine showing of roses, carnations and other exhibits, and he urged the Eastern growers to do likewise. Everything seems to augur well for the future of the S. A. F.

President Simpson of the American Rose Society gave an entertaining talk on the recent rose show held in Chicago, mentioning as especially worthy of praise, the American Beauty, Richmond and Killarney roses on display. He could not find an adjective strong enough to express his admiration of the Killarney flowers on exhibition. Among the weak points as they appeared to Mr. Simpson was the monotony created through the lack of exhibits other than roses. There were, too, too few of the Bride and Bridesmaid types and none of the old favorites of years ago. He did not believe that it was the very best thing to give an exhibition with just one flower alone, and had there been exhibits of orchids, palms or other decorative plants to relieve the monotony, the rose show would have been improved 100 per cent.

W. A. Manda also spoke of the rose show, and humorously referred to the fact that it was comical to see rose men ask the name of the old-time favorite, Safrano.

Mr. Manda thought that it would be a good plan in future rose shows to exhibit for comparative purposes some of the old-time varieties with those of the present day, so as to demonstrate the progress that had been made. He mentioned that at the Ghent Quinquennial exhibition a replica of the exhibit one hundred years ago was to be made so as to show the progress in European horticulture during the century that has passed. He also urged Eastern growers to make an exhibit at the Chicago show, for which the Western people were already making great preparations. He cited the fact that if it were possible for cut roses to travel to Chicago and take prizes at the recent rose show, there should be no difficulty in shipping cut flowers for the national flower show.

Secretary Young spoke in high terms of the courtesy extended to the executive committee by ex-Mayor Cutler and other Niagara Falls people. He urged a large attendance at the forthcoming S. A. F. convention, and hoped that the Western as well as the Eastern men would come forward in large numbers with exhibits at the next show of the American Rose Society, which will be held in Buffalo in 1908. The meeting then adjourned.

Single-flowered Sport of Crimson Rambler
Grower, Anton Schultheis, College Point, N. Y.

Several very interesting exhibits were before the award committee. Julius Rochrs Company of Rutherford, N. J., showed a nice specimen plant of their new rose, Newport Fairy, for which they were awarded a certificate of merit. A. Schultheis, College Point, N. Y., exhibited two plants of a single sport of the rose Crimson Rambler. The flowers are borne in extremely large trusses, some of the clusters having as many as fifty blossoms. The flower is single, with a center almost white, the outer edge of the petals being of a very pleasing pink, shading lighter toward the center. The plants exhibited showed that the variety was extremely free flowering, with an upright, bushy habit, making it peculiarly adaptable as a pot plant. A preliminary certificate was awarded. W. A. Manda showed blooms of the Cherokee rose and a vase of flowers of a hardy pink, and was awarded a vote of thanks. John Cook, Baltimore, Md., sent a vase each of his two roses, My Maryland and one under No. 267. The former is a very pleasing light pink-colored rose, very full and large, and has a pleasant tea fragrance. This variety scored 85 points. The variety under No. 267 is of a deeper shade than the before mentioned, a very pretty color, and we are informed that the entire stock has been secured by Peter Henderson & Company. The thanks of the club were awarded Mr. Cook. It goes without saying that any variety of which Peter Henderson & Company secure complete control of the stock has given evidence of being a first-class sort in every particular. Robert Scott & Son, Sharon Hill, Pa., exhibited a large vase

of the rose My Maryland. The latter variety received a certificate from the club. The variety under No. 267 was extended the exhibitor. A vase of flowers was given to H. A. Jahn, New Bedford, Mass., for two exhibits of carnation, one, the white variety Liberty and the other a crimson variety named Jane Grosvenor. The flowers were not received in the best of condition. R. M. Schultz, Madison, N. J., staged a vase of Richmond and received a vote of thanks.

CONNECTICUT HORTICULTURAL SOCIETY. The regular meeting of this society was held in County Building, Hartford, April 10. It was certainly well and as invariably happens on such an occasion, there was a large attendance of members. The quality of the exhibits as a whole was of a high order and the awards made in each case were entirely merited. The judging committee, Messrs. Zuger, Roulter and Chambers, went over the exhibits carefully and their findings were as follows: John Coombs, diploma for vase of White Perfection; Carl Peterson, certificate of merit for collection of carnations and honorable mention for vase of Kaiserin Augusta Victoria roses; W. N. Shumway, honorable mention for pink seedling.

H. A. Pinney read a very able and instructive paper on the history of the carnation, for which he received a hearty vote of thanks. President Huss specially complimented Mr. Pinney, by saying that the paper was the most interesting he ever had the pleasure of listening to.

G. W. Smith, delegate from this society to the annual meeting of the Massachusetts Fruit Growers' Association at Worcester, gave a very interesting talk of his visit.

The society will hold a pansy exhibition on May 27, and a paper on the "Evolution of the Pansy" will be read by John Gerard.

The special committee reported having engaged Unity Hall for September 23, for the dahlia show. A committee was also appointed to secure a hall for the chrysanthemum show, November 5 and 6.

There will be an exhibit of roses at a meeting on April 24.

MORRIS COUNTY (N. J.) GARDENERS AND FLORISTS' SOCIETY. Rose night brought out the members in full force, about fifty being present, and a number of visitors from Madison, Morristown, Orange and Rutherford. James B. McArdle of Vaughan's Seed Store was with us and in a very complimentary speech gave us his impression of the exhibition, which was not confined to roses entirely. H. B. Vyse, gardener to Mr. A. R. Whitney, had two magnificent *Caleolaria hybrida*, one of which secured the H. A. Bunyard special prize of \$5 cash; A. R. Kennedy, gardener to Dr. L. D. Ward, had a grand specimen fuchsia, for which the committee awarded a special premium of \$3; he also got a vote of thanks for his *Telegraph* clematis. Charles H. Totty had fine plants of *Azalea Bernhard Andreas* alba, receiving a vote of thanks. Otto Koch, florist at the New Jersey State Hospital, brought six plants of *Spiraea Gladstone*, for which he received a cultural certificate, and six plants of *Spiraea Queen Alexandra*, which won him a certificate of merit. A special premium of \$3 was awarded him for the exhibit.

Mr. A. C. Van Gassbeck, Orange, N. J., John Dervan, grower, had a magnificent vase of mixed roses and a vase of fine *antirrhinum*, which secured a cultural certificate. Robert M. Schultz showed vases of Richmond, Bride and Ivory in fine condition, cultural certificate. George Harvey had two vases Bride and Bridesmaid, receiving honorable mention and a vote of thanks. "Villa Lorraine," F. P. Brigham, grower, had a fine vase of 100 Bride; a cultural certificate was awarded John R. Mitchell, our essayist, had Richmond, Ivory and Bridesmaid; a magnificent exhibit, especially the Richmond. Cultural certificate awarded. C. A. Work, Wm. Mühlmichel, grower, had one vase of Richmond and got a cultural certificate. L. A. Noe, Joseph Ruzicka, grower, had American Beauty, Killarney, Bridesmaid and Bride—a grand exhibit, receiving cultural certificate.

John Green, Morristown, had his new carnation seedlings, red number 1 and white number 2. The former secured a certificate of merit, scoring 85 points; the white scored 76 points, receiving honorable mention. Florham Farms, A. Herrington, superintendent, showed American Beauty, Bridesmaid, Richmond and Mme. Abel Chatenay roses and a fine lot of Darwin tulips in pots, and received a cultural certificate. William Duckham staged a vase of fine Richmond, which secured a cultural certificate.

John R. Mitchell read his paper on "Rose Culture." It was a masterly effort and he received a rising vote of thanks. Mr. Mitchell was called on to answer many questions. Among the speakers were: Joseph Ruzicka, Wm. Duckham, J. A. Manda, C. H. Totty, A. R. Kennedy, R. M. Schultz, Wm. Mühlmichel and A. Herrington.

Next meeting, May 13, will be devoted to flowering shrubs and hardy herbaceous plants. The special evening will be Arthur Herrington's "What to do at ladies' night and we have appointed a special committee, of which Robert M. Schultz is chairman, to look after the fair sex.

Among the Philadelphia Florists

Robert Craig Company.

At Robert Craig Company's every-body was hustling, packing and loading on Adams Express Company's drays which were in waiting to carry Easter plants to distant points. When I found the senior Robert, his greeting was: "Would you be surprised if our business this Easter beats all our previous records?" I had to admit that owing to business conditions generally, I would be surprised if their profits were ahead of any former Easter. "Well," Robert added, "it looks like it to me now," and I certainly hope it may prove to be so.

All the rose plants to be seen here were in fine shape. In addition to the good old Crispin Rambler there were a few different varieties in the pink shades, Dorothy Perkins and Lady Gay, which English gardeners have come to call a "glorified Dorothy," and there was the Tausendschön ("A thousand times beautiful!"). The two "Dorothys" are very much alike, and in order to point out intelligently wherein the Lady Gay is superior to Dorothy Perkins, I would have to see them growing side by side under more natural conditions outdoors. They are both valuable and produce very double flowers of a delicate pink. Dorothy Perkins is a seedling between Wichuraiana and Mme. Gabriel Luizet. I do not know the parentage of Lady Gay, but the indications are that it is a Wichuraiana hybrid also. It is one of M. H. Walsh's many valuable productions. Dorothy Perkins was disseminated by Jackson & Perkins, a year or two before Lady Gay was put out.

The Tausendschön is a German production and is very distinct from the other two referred to above, the petals being larger, though not so numerous as in the buds of the American seedlings. The coloring is variable, being a beautiful shade of pink when first opening, changing with age to a darker shade, and occasionally white blotches are to be seen in some flowers. This is expected to be a great success as an outdoor rose after it has become established in permanent quarters. It is a strong grower and a free bloomer, lasting well in bloom through the months of June and July. The persistent qualities of the flowers of this class of rose, to which all the climbers mentioned belong, make them ideal plants for forcing for Easter; besides, the salesman is quite justified in recommending them for outdoor planting, the one great trouble being, the recipients of the plants too often do not thoroughly understand planting them properly. They do not realize how necessary it is to firm the soil around them when planting, and giving them abundance of water at the same time and at frequent intervals during the growing season.

The budded plants of Baby Rambler on stems 5 feet or so high were well flowered, but they did not show to such good advantage as some, or I venture to say all of the Wichuraiana hybrids would do which have a natural tendency to droop downward. I did not recognize the stock on which the Baby Ramblers were budded. It was not Rosa canina. Was it rugosa? In Great Britain and some other parts of Europe Rosa canina—the wild rose of the hedges there—is almost invariably used on which to bud roses to form standards, and the seedling briars, which are grown from seed of the Rosa canina and are sometimes used on which to bud some classes of roses to form as dwarfs, though for a stock on which to graft roses for forcing under glass for Winter blooming the manetti stock is most in use. This, I believe, is a native of Italy and is increased by hard wood cuttings and is generally grown for the American trade in Europe.

After leaving the Ramblers we looked over the dwarfier varieties, as Magna Charta, which is still one of the safest to tie to for an Easter rose—every shoot producing flower buds; indeed, so well ripened was the wood of all the varieties used by this firm for pot plants for this great floral festival that blind shoots were the exception. A fine lot of American Beauty pot plants were well set with buds. These plants had been used for the production of cut flowers in the Fall and early Winter, and no better use

could they be put to than bringing them in as pot plants for Easter, or for Spring sales, for with careful treatment they are always profitable. The name American Beauty helps to sell them, and there are few roses that give more satisfaction when planted outdoors for amateurs. Some of the variety Tom Wood looked promising. This rose, Mr. Craig says, is known in England as the "ever-blooming Jack." If the surname proves to be correctly applied and makes good under American climatic conditions, its great value is readily understood.

The azaleas here are a fine lot, those trained in pyramidal form being especially attractive. They remove that flatness, which is all too apparent when a group of azaleas is arranged, where all and Mr. Craig says the Van der Cruysse old type are used in the arrangement, and lends itself better to this manner of training than any of the other varieties so far tried.

A fine house of lilies, the bulbs of which were supplied by W. P. Craig, were just right for delivering at the proper time. These bulbs were Azores grown and have proved very satisfactory. They were uniform as to height and type. The "trumpets" were not so large as are those of other types, and apparently are less liable to be bruised in handling.

William K. Harris.

At the establishment of Wm. K. Harris the large packing shed—into which all the greenhouses here lead—was most effectively arranged with the plants of the first class, for which this place is celebrated. The lilies were all right; not a brown tip to be found on any of the leaves; in fact, this disfigurement of the foliage of the Easter lily was less in evidence at any of the places that I visited than it used to be some years ago.

In the center of some of the groups were some fine specimens of the variegated-leaved maple (*Acer negundo argentea variegatum*), which I thought at first sight, the white in the leaves, that gives the variegation, was suffered with pink, but on investigation I found that the effect was produced through a group of pink azaleas reflecting the coloring through the glass at the gables of the greenhouse immediately adjoining the group wherein the maples were arranged. I would not be surprised if this effect was not arranged purposely to attract the visitors, of which there were a goodly number examining the display.

This maple is very effective when used judiciously in outdoor plantations in England. Will it flourish satisfactorily under the influence of the American sunshine? I do not remember to have seen it used outdoors in this climate.

The comparatively rare azalea *Hinodegeri* was a mass of buds and blossoms. This variety evidently belongs to the amena family, differing only apparently in color, which is a bright red, while the amena is nearer magenta in its coloring, which is a color difficult to use harmoniously with others, unless white is plentifully employed as a peacemaker. The *Hinodegeri* is sometimes called *Firefly*; but *Hexe*, a cross between amena and one of the greenhouse varieties, has been renamed "*Firefly*" and I have seen *Hexe* referred to as the "*Improved Firefly*" and that is how confusion multiplies.

Spiraea Gladstone has now become the favorite white variety for Easter. As to pink varieties, *Queen Alexandra* is preferred to *Peach Blossom* and one with a little more color would be preferred to either.

Jacob Becker.

Jacob Becker's place is always interesting, and Mr. Becker is an interesting personage. He is a keen observer and he imparts his impressions with deliberation and precision. He secured only 1,000 lily bulbs to force for Easter, and a third of these failed. The remaining two-thirds were all right and just on time to be used to the best advantage. They varied in height from one foot to two feet six inches. They were bought for the multiflorum variety, though they appeared very much mixed. Mr. Becker stated there is a difference of opinion as to which is the true multiflorum type; some experts contending that the *Simoneum multiflorum* has narrow leaves,

GRAFTED ROSES

NOVELTIES

MRS. JARDINE, RHEA REID, QUEEN BEATRICE.
The above, \$6.00 per doz., 50 plants for \$18.00, \$35.00 per 100.
MY MARYLAND, 50c. each, \$5.00 per doz., \$35.00 per 100.
On own roots, 2 1/2 in. pots, \$25.00 per 100, \$2.00 per doz.; 3 in. pots, \$5.00 per doz.
MRS. POTTER PALMER, \$3.00 per doz., \$17.50 per 100, \$125.00 per 1000.
NEW RAMBLER "NEWPORT FAIRY." For delivery Spring, 1908. Well rooted plants in 2 1/2 inch pots \$1.00 each, \$9.00 per dozen, \$50.00 per 100.

STANDARD VARIETIES

Aurora, Betty, Bon Sileas, Bride, Bridesmaid, Enchanter, Etoile de France, Franz Deegen, Geo. McArthur, Golden Gate, Hermosa, Ivory, Kaiserin Augusta Victoria, Kate Monlon, Killarney, La Detroit, Maman Cochet, Marechal Niel, Mme. Abel Chateau, Mme. Hoste, Mrs. Pierpont Morgan, Papa Gontier, Rosalind Orr English, Richmond, Souv. du President Carnot, Souv. de Woodton, Uocle John, Wellesley, White Cochet.

GRAFTED, 2 1/2 inch pots, 20c. each, \$2.00 per doz., \$15.00 per 100, \$120.00 per 1000.

AMERICAN BEAUTY

Own root, 2 1/2 inch pots \$8.00 per 100, \$75.00 per 1000, 3 inch pots \$12.00 per 100, \$100.00 per 1000. April, May and June delivery.

OWN ROOT ROSES

From 2 1/2 inch pots, repotted from 2-inch. Kaiserin Augusta Victoria, Killarney, Bride, Bridesmaid, Ivory, Golden Gate, Uocle John, Richmond, Mme. Abel Chateau, Aurora, \$1.00 per doz., \$6.00 per 100, \$50.00 per 1000.
From 2 inch pots ready for shipment, \$3.50 per 100, \$30.00 per 1000.

CARNATIONS—Rooted Cuttings.

Winsor	100	1000
Rose Pink Enchantress	3.50	30.00
Enchantress	2.50	20.00

Prices Advertised in these Columns are for THE TRADE ONLY— When Writing Please Mention THE FLORISTS' EXCHANGE.

whereas his own experience has taught him that the narrow leaved variety is not at all free in the production of its flowers. A batch was pointed out that had not been brought into the greenhouses until some time after the first batch, and they were decidedly shorter in the stems in comparison, the first lot being much taller than the last; and in order to bring the last lot into bloom in time for Easter they had been subjected to a decidedly higher temperature. He had always found that the higher the temperature lilies are forced the shorter the stems.

Shortness of the stem, however, makes no difference to the price of the flowers and unexpanded buds, but it is noticeable when customers select their own plants, as a rule, they pick out those with the taller stems first. It is only new customers who pick out the plants bought here; the older ones leave the selection entirely to Mr. Becker's own judgment. In connection with the loss in forcing lilies Mr. Becker thinks a great deal depends upon the man behind the water supply. For instance, his friend, George Carpenter, Sr., did not lose so large a percentage as he himself had done, because George watered his plants carefully himself with the watering can, being careful to give water only to those which needed it, instead of dashing the water around less or more indiscriminately with the hose. The question to be decided: "Did the difference in time spent pay for the additional plants saved?"

The rose plants for Easter were at his Walnut street branch. Mr. Becker incidentally mentioned that he had 150 General Jacqueminot plants in 7-inch pots that readily sold at the wholesale price of one dollar each.

He spoke very highly of some American Beauty plants he had in good shape for Easter; these he had bought from Robert Scott & Son, who had to get rid of them to make room for the accommodation of the young stock of their new rose, Mrs. Jardine.

A fine lot of rhododendrons were to be seen here. What a beautiful variety is the Prince Camille de Rohan, with its delicate colored flowers, very effectively spotted on the upper petals. Two plants of this variety were in full bloom and in fine condition, but the flowers were too far open to be sold to advantage the present year; so said Mr. Becker. All plants have to be just so to satisfy the fastidious retailers nowadays, who specify very minutely to the effect that they require only a very few flowers quite open with lots of buds to follow later; and this edict applies to all flowering plants and it would seem that such regulations are all for the benefit of the final customer, and that idea conscientiously should work to the positive advantage of all concerned in progressive floriculture.

The azaleas were an even lot with Van der Cruyssen in the bud as to quantity, but according to Mr. Becker this old reliable stand-by among azaleas will in due time be superseded by the new Julius Roehrs, which is of much better color, being more intense, and the equal of the Van der Cruyssen in every other respect.

Overbrook Gardens.

After seeing and admiring a plant in bloom of *Lupinus polyphyllus* Moerheimi at the April meeting of the Philadelphia Florists' Club I could not resist taking a run out to the place where same was grown and forced into bloom. The proprietor, Edward A. Stroud, was away at Atlantic City storing up additional energy to prepare himself for the strenuous week he had before him, satisfying his Easter patrons. The foreman, the ever-obliging Mr. Prince, was on hand, who willingly led the way to where the results of excellent foresight, in securing so valuable a flowering plant for Easter or any other floral occasion was to be seen; being a hardy herbaceous plant adds to its good qualities. Every plant produced from two to three of its beautiful delicate pink flower spikes, and there were lots of others showing at the base ready to develop when planted outdoors. Owing to a lack of space the foliage had more of an upright tendency than it otherwise would have had, could more room have been allowed for each individual plant, but whether the profits would have been any greater could only be known by careful experiment and observation.

The plants were secured from Henry A. Dreer since the New Year, and in

500,000 PANSIES BEST MARKET STRAIN GROWN

Grown from seed of our own raising, this strain is the result of over 25 years' careful selection and for size, form and substance and wide range of color in clear, brilliant selfs and novel shades and markings, they will be found unsurpassed. The colors are very evenly assorted and the growth is very strong and stocky.

Fall transplanted plants ready to bud and bloom. Price \$10.00 per 1000. Larger Sizes \$15.00 and \$20 per 1000.

EXPRESS ONLY CASH WITH ORDER

L. E. COBURN, - 291 Ferry Street, - EVERETT, MASS.

February were brought into a cool greenhouse where the maximum night temperature was 50 degrees, and in this gentle heat they came into bloom just right for Easter.

Since this novelty among perennial lupins has proven to be such an excellent subject for forcing, the white and the blue polyphyllus would make appropriate companions to this pink one. Annual lupins have been forced for cut flowers for Winter for some years past, but so far as I know this is the first time that the perennial species have been used. It appears to me the latter is the better for said purpose, as having more decorative value than some of the annual varieties I have seen, either as a pot plant or for cut flowers.

To again allude to the treatment of this perennial for forcing, Mr. Prince states that he believes better results could have been attained if the roots had been obtained and potted in the early Fall and kept for a time in a cold frame and protected from severe frost. Under the treatment as given by Mr. Prince some of the spikes measured a foot long.

Among other plants seen here were some well grown Hydrangea otaksa, the individual "heads" of which were very large; one I measured and found it to be sixteen inches in diameter. The lilies for the most part were just right for the time needed; some of the bulbs used were grown in the Azores—a group of islands located about 800 miles west of Portugal, to which country they belong. There were also some of the multiflorum

and giganteum types here. One made-up pan was a fine specimen having thereon 45 flowers and unexpanded buds. I understood Mr. Prince to say the percentage of worthless bulbs with him was quite small. About the best lot of L. candidum I have seen for some time were here, with stems not too tall; all were well set with buds. Some will be in bloom for Easter, while others will be held back for Memorial Day.

The gloxinias as grown here were in full bloom. They are in pans and stood in saucers, whence they receive their moisture sub-irrigation, as it were. Water is never allowed to touch the foliage, and when sold the saucer goes with the plant, and explicit instructions are given as to how and when to give water. Under the conditions as laid down the gloxinia has proven quite satisfactory as a house plant, lasting sometimes as long as six months.

Another hardy plant was seen here forced into bloom as an Easter subject, namely, the common flowered Diervilla Eya Rathke, better known by florists and gardeners as weigand. This variety

GERANIUMS 2 in. S. A. Nutt, \$20.00 Per 1000; \$2.25 per 100; rooted cuttings, \$12.00 per 1000; \$1.25 per 100. VARIEGATED VINCA, rooted cuttings, \$10.00 per 1000. Cash with order.

S. N. PENTECOST
1790-1810 East 101st St., CLEVELAND, O

was new to me. It is said to be almost a continual bloomer when well established outdoors. These were imported plants and had been pot-grown the previous Summer, in that way preparing them for forcing.

Other plants of interest to be seen here I must leave for a future visit before saying much about them, but I cannot close without referring to some new and promising varieties of zonal pelargoniums, one of which was especially striking. It is labeled Daniel Stern. The flower is double, a rich dark velvet crimson in color, and the ample foliage is more darkly zoned than is any other zonal that I have before seen.

EDWIN LONSHALL.

CLASSIFIED ADVERTISEMENTS

Cultural Directions

Are leaflets written by practical men especially for the use of amateur customers.

If you have a counter trade, either in plants, seeds, flowers or bulbs, you should have a supply of these leaflets on hand to present to your customers when they seek cultural information about their purchases.

(The leaflets embrace over forty subjects.)

We can supply them at \$2.50 per 1000, or 500 for \$1.50, and can make a reduction of those prices on large quantities.

At a small extra cost we can put your imprint on each leaflet.

Try a thousand and see what a help they are in selling goods.

NEPHROLEPIS AMERPOHLI

PHILADELPHIA LACE FERN

\$12.00 per 100, \$100.00 per 1000. 5% off cash with order.

These are good strong plants that were potted November and December last.

We need the room and must move them.

Also a fine lot of 6 1/2 inch pots at 75 cents each, 25 or more at 70 cents each. This is the most talked about fern of the lot and has been awarded a great many honors, including a medal by the Royal Horticultural Society of London and the "Kitt Cup" by the Pennsylvania Horticultural Society for the most meritorious new plant introduced in 1907.

Equally as good as green for cut flowers or pot culture.

The stock here offered is in superb condition.

WILLIAM P. CRAIG, 1305 Filbert Street, Philadelphia, Pa.

FERNS NEPHROLEPIS

BYER BROS., CHAMBERSBURG, PA.

Flower Show at Massachusetts Horticultural College.

The department of floriculture is arranging for a carnation and rose exhibit to be held in Wilder Hall, Friday evening, April 21, and Saturday, April 25. It is felt that the students at the college should receive a better training in varieties of commercial crops than they can get from materials now grown in the vicinity. The students feel that they cannot afford to travel for this study, therefore this exhibit has been arranged. Professor E. A. White has written many of the most prominent rose and carnation growers asking if they would send one or two dozen blooms of their standard varieties for exhibition at this time, and has received many cordial replies. The New Hampshire Agricultural College will show six or eight of their best seedlings; Peter Fisher, Ellis, Mass., will send several of his unnamed seedlings and some of his standard varieties; C. W. Ward, The Cottage Gardens, Queens, New York, will show the following varieties: Creole Beauty, Alma Ward, Mrs. Harvey, Snowflake, Beacon, and Mrs. C. W. Ward. Among others who have signified their intention to send material for exhibition are Alexander Montgomery, Waban Rose Conservatories, Natick; J. W. Adams & Company, Springfield; H. W. Field, Northampton; Peirce Brothers, Waltham; William Sim, Cliftondale; F. R. Pierson Company, S. J. Goddard, H. H. Rogers. This exhibit will be open to students and townspeople and should have considerable educational value.

It has not been possible to write each individual grower asking for contributions for this exhibit and if there are others who care to contribute their material will be heartily appreciated. The college will pay all express charges.

The trustees of the college are asking for a legislative appropriation of \$34,000 for a new range of greenhouses of modern commercial type, with an attached teaching building for use of the floricultural department. It is not the intention of the college to engage in commercial floriculture, but a new range, adapted to giving the students up-to-date instruction in methods of growing cut flowers for the trade, is badly needed. It is expected to erect an instruction building costing about \$15,000. This will contain a large laboratory and workroom to accommodate at least fifty men at one time, a classroom for one hundred men, smaller classrooms, office and a room for the exhibition of material used in greenhouse construction. The basement will contain a soil and fertilizer room, a cool room for bulbs, and rooms for storage of pots and implements.

The greenhouse range as now planned will consist of a palm house 30 by 40 feet on the east end of the general workroom. From the south side of this workroom a house 12 feet wide and about 180 feet long will run directly south. This will be used for propagation and for general plants. On the east and west sides of this low, narrow house the special houses of the range will be built. This will provide for a full southern exposure for each house. The range as planned includes a students' house for special student work, 20x30 feet; violet house, 24x70 feet; chrysanthemum and bedding-plant house, 24x50 feet; lettuce house, 24x50 feet. These will be even-span houses. The range will also include a rose house, 24x70 feet, a carnation house, cucumber house and tomato house, each of the same dimensions. These will be three-quarter span houses. This range will be built as durable as possible with iron frame and cement foundation and benches.

REVIEW OF THE MARKET

NEW YORK.—The cut flower market on Monday opened up a little brighter than has been the rule, and, of course, an effort toward advancing prices was in order. This was also the condition on the day following, and as supplies were not particularly heavy, some people even going so far as to say that rose growers were already beginning to hold back a little of the stock, values were sustained better than has been possible for many weeks. American Beauty roses were pushed to 25c each in a few isolated cases, and for small lots 30c, was realized. The best Bride and Bridesmaid and similar varieties were advanced to 8c each, and while some were sold at 6c, still a fair percentage brought the higher mentioned figure. Carnations also were advanced slightly, but for lilies no raise was possible, as there were too many in the market.

The supplies of Narcissus poeticus and the yellow varieties continue quite heavy, but Paper White are tapering off considerably. The receipts of sweet peas are heavy, and the quality superb. Lilies are in heavy supply, as also are daisies of the white varieties; the yellow ones do not seem to be very plentiful. There is a nice supply of orchids coming in to meet the Easter trade, and there will be plenty of violets also.

Everybody is wondering and asking what kind of an Easter it is to be. The business the last two or three months has been so erratic that it is utterly impossible to form any opinion of the Easter trade at the present time. By Sunday noon we shall know—and not until then.

CHICAGO.—The near approach of Easter is having some effect on the market during the opening half of the week. Shipping trade is quite brisk, particularly in orders for lilies destined for distant points. The warm weather prevailing will delay the shipping of more perishable stock until the last moment. Appearance denote plenty of stock in all lines for the holiday trade, with a great predominance of white flowers. Carnations are plentiful in white varieties, but colored sorts will run short if there is a heavy demand for them. Roses are very plentiful, and of excellent quality. Long-stemmed American Beauty are rather more abundant than could be wished by growers, consequently fancy prices are not forthcoming except for unusually fine selections. Bride, Bridesmaid, Richmond, Killarney and other teas are in excellent crop, and prices have strengthened somewhat with the opening of the Easter season. Bulbous stock is over plentiful. Tulips show the effect of the warm weather, and potted and panned stock presents rather a pitiful appearance. Emperor narcissus is in grand condition, but moves slowly, outside grower stock proving too much of a competition. Lilies are abundant, and must be fine indeed to bring better than maximum quoted prices which seem to be top notch for local trade. Callas are in excellent demand, and are not so plentiful as last week. Violets are poor, and do not command much. New York shipments arriving in very unsalable condition, and local supplies being nothing to boast of as regards quality. Orchids are somewhat scarce. Lily of the valley moves fairly well, and seems always to be in good supply. Quantities of Southern lily are arriving, most of it prematurely out and lacking perfume. Sweet peas continue in good demand, and are taken very generally in preference to violets. I. H. P.

BOSTON.—Business has been fairly good for some time back and prices are a little stiffer. Roses never were better in this market than now and the chances are that fairly good prices will be realized for the Easter trade. There are exceptionally fine grades of Richmond, Killarney and Mme. Abel Chateaux. Carnations are very good; there is likely to be a heavy demand for the yellow and white sorts. Lilies being about the same old prices. Lily of the valley is of good quality. There is an abundance of bulbous stock of all kinds. Violets are still in demand, and have become scarce. Sweet peas are plentiful and of extra fine quality. The outlook for a good holiday trade is bright. J. W. D.

INDIANAPOLIS, IND.—If an abundance of well-grown flowers and general preparations for Easter are met by the public in the spirit of other years this holiday will disappoint no one. Much that was intended for this week has been forced upon the market prematurely at a low figure, but enough remains for all. Funeral work and decorating are well abreast of last season, counter trade is misleading and often disappoints the best laid plans. Prices on bulbous stock will be lower this year. The greenhouse supply is augmented by thousands of outdoor blossoms at \$1.50 to \$3 a hundred. Sweet peas will, to a large extent, supplant the customary flowers for the corsage; 50c to \$1 a hundred is the wholesale price. Carnations are in abundant supply at \$3 to \$5 a hundred. Despite the many unfavorable Easter lily reports there are now available many hundreds at \$12.50.

Easter is always well supplied with roses. A few of the choicer varieties, such as Killarney and Richmond, bring advanced prices. American Beauty are in fine condition at \$5 to \$10 per hundred. Tomlinson Hall Market is well prepared for the general public with thousands of lilies, spireas, tulips, azaleas, and roses; business there has been quiet lately. I. R.

ST. LOUIS.—There were no exciting developments in the cut flower line the past week. There was considerable funeral work which used up everything in the cheaper grades of cut flowers. The market was loaded down with plenty of extra good stock all week, and the wholesaler had his trouble to dispose of his consignments at cheap prices, or dump them. Roses and carnations were in abundance, also callas and other bulbous stock.

It is as yet too early to say just how things are going to turn out for Easter or how stock is going to be at the commission houses, but from a talk with the wholesalers, prices will run about as follows: American Beauty, fancy, \$1 to \$6 per dozen; other grades, \$1 to \$3, and shorts, 50c to 75c per dozen; other roses from \$6 to \$10 per 100. Carnations, \$3 to \$4 for fancy, and \$1 to \$2 for next choice. Lilies, \$10 to \$12.50 per 100. Bulbous stock will run in price about as usual. Violets will be scarce, as it is getting too late in the season for them. Smilax, asparagus and other greens will be as usual. ST. PATRICK.

FELTHOUSE'S GERANIUMS

None better, if as good. The following varieties, in 2 1/2 in. pots, with or without soil, \$18.00 per 1000. Beaute Poitevine, S. A. Nutt, La Favorite, John Doyle, Richard Brett, Ricard, Bruanti, General Grant, M. Canovas, Jean Vuud, Pasteurian, Lundy and several others. FIRMS WHO ARE BUILDING.

Items for insertion under this heading are respectfully solicited from our subscribers. They are published free of charge.

ACUBURN, ME.—An addition is being built to Roak's greenhouses on High street.

NORTH WOBURN, MASS.—Adm. Foster, 848 Main street, is to build extensions to the two new greenhouses that he erected last Winter.

DANIELSON, CONN.—Franklin & Crosby's new greenhouse is completed, and was opened to the public on Saturday, April 11.

ANSONIA, CONN.—J. W. Willis has been making several improvements and changes at his greenhouse plant, which now embraces 10,000 square feet of glass.

CHANGES IN BUSINESS.

The Florists' Exchange will be pleased to publish under this heading all changes occurring in the addresses of firms connected with the trade, as well as notices of concerns or individuals just starting in business. All such items are inserted free of charge.

KASLO, B. C.—C. T. Elle, a nurseryman of wide experience in Oregon and Washington, will start a nursery here.

APPLETON, WIS.—Charles H. Johannsen has given up his florist business here and returned to Fond-du-Lac, Wis.

AMHERST, MASS.—M. B. Kingman will move his florist's establishment from Amy street to the store in Hunt's block recently occupied by Mrs. D. O. Spear.

LOWVILLE, N. Y.—William R. Keay has removed his greenhouse to the Scott place, where he will have the use of the spacious greenhouses, with entrance from Easton street, and will continue the business which he established in his previous location. The increased space will permit of handling a greater variety of stock.

PORTLAND, ORE.—James Forbes, the well-known florist, who was absent from the city for about a year, has again associated himself in business with Mr. Martin, under the firm name of Martin & Forbes Company. As of yore, Mr. Forbes will take personal charge of the store at 317 Washington street. The firm has been incorporated with paid-up capital of \$50,000. The greenhouse plant is at Mt. Tabor.

MAMMOTH VERBENAS

Large plants from soil, 60c. per 100, by mail; \$1.00 per 1000, by express; 2 in. pots, strong plants, coming in bud, \$1.50 per 100, \$12.00 per 1000.

PANSIES, Giant Trimardeau, finest mixed, transplanted plants, 50c. per 100; \$3.00 per 1000. PANSIES, extra large plants, in bud and bloom, \$1.00 per 100, \$8.00 per 1000.

SALVIA Splendens, from soil, 75c. per 100. GERANIUMS, in bud and bloom, 4 in., Nutt, Double Grant, Poitevine, Vuud, Jauin and White, \$6.00 per 100. 15-16 Gray Ave. HILL TOP GREENHOUSES, UTICA, N. Y.

PANSY PLANTS

Of my largest flowering mixture of show varieties, unsurpassed quality. Strong plants, out of cold-frame, will bloom by May 1, \$2.00 per 1000; 5000 lots, \$2.50 per 1000. Fine transplanted blooming plants, \$1.25 per 100, \$10.00 per 1000; 500 at 1000 rate.

BELLIS (daisies), in red and white, \$2.00 per 1000.

GUSTAV PITZONKA, Bristol, Pa.

ALTERNANTHERAS

Strong rooted cuttings, red and yellow, 50c. per 100, or \$4.00 per 1000. Brilliantissima, 60c. per 100, or \$5.00 per 1000.

DAVIS BROS., Morrison, Ill.

PANSIES

Giant flowering, none better, \$2.50 per 1000. DAISSIES, Bellis, in bloom, \$1.25 per 100; \$10.00 per 1000. Plants that will bloom soon, \$2.50 per 1000. Stocks, Verbenas, Salvias, Dusty Miller, Alyssum, single and double, fine plants, out of 2 1/2 in. pots, \$2.00 per 100; \$15.00 per 1000.

J. C. SCHMIDT, Bristol, Pa.

Chicago.

The Week's News.

With the opening of the week Easter business began to assert itself. On Monday night some heavy shipments of lilies were made to extreme Southern points, and long distance orders were freely booked, both Monday and Tuesday. Retailers' windows very generally proclaim the fact that Easter is at hand. Potted lilies, pots and pans of hyacinths, tulips, and other Spring flowers, with ornate coverings, are to be seen everywhere. Beyond a few azaleas here and there flowering plants are not conspicuous, and decorative plants do not appear to figure much in the Easter display. Several of the large stores have taken on a holiday appearance, banks of lilies being seen here and there in the windows.

The Health Department of Chicago, in a pamphlet issued on Monday, advocates gardening, both as a healthful and a profitable employment. All citizens are urged to clean up their yards and plant either vegetables or flowers.

The Chicago Florists' Club at its next meeting will take up the matter of holding a picnic or other outing during the Summer. Members are expected to give the matter some thought, and be ready at the meeting with suggestions, all of which will receive consideration.

Albert Fuels, formerly well known in the florist business, leaves April 29 for Germany and will take part in the fencing competition of the Hundsturnfest in July for the amateur championship. Mr. Fuels is now in the real estate business and has erected some fine villas surrounded by unique gardening effects.

Bassett & Washburn are receiving a fine cut of long-stemmed American Beauty roses from their Hinsdale greenhouses; the receipts this week are averaging a thousand a day.

Weiland & Kisch have commenced the construction of their six new 350-foot greenhouses, and expect to have them completed by July 1.

The A. L. Randall Company is receiving daily shipments of small yellow chrysanthemums.

Harry C. Rowe is temporarily extending his store for Easter requirements, by taking in a reading room of the Palmer House.

Fine sweet peas continue to be a specialty at the store of the J. B. Deamud Company. A quantity of Southern lilac is also being handled this week.

Emil Schloss of the Schloss Brothers ribbon house, New York, was a recent visitor.

Albert T. Hey, Springfield, Ill., is a visitor this week. J. H. PEPPER.

GERANIUMS

S. A. Nutt, John Doyle, A. Ricard, Buchner, Castellane, Jean Vuud, Beaute Poitevine, 2 in. pots, \$18.00 per 1000; 3 in. pots, \$3.00 per 100; 4 in. pots, \$5.00 per 100.

News and Trade Notes.
General business is still quiet, with clean-up sales on Friday and Saturday. The outlook for Easter is good; prices will not be prohibitive and stock of all kinds will be in abundance. The only trouble will be that all the sales will be hunched into about two days, but after what we have been up against for the past few weeks, we shall all be pleased to take off our coats and work.
The Jabez-Elliott Flower Market was quite active on Saturday last.
Park Superintendent Rodgers is certainly having all he can do this Spring; with the new park extension, grading, making streets, and thousands of other details he is a busy man.
Charles Dietrick, of Maysville, Ky., and Charles Wertz, of Wilmington, O., were callers.
At the present time our Kentucky friends are sleeping with one eye open, especially those who grow tobacco. Night riders seem to have the whole State bluffed.
Miss Cronan, a florist at Covington, Ky., had a call from burglars on the 9th, but her little watch dog gave the alarm and scared them away.
L. E. Benson, Newport, Ky., has just returned from a trip to Oklahoma City. He speaks very highly of that city and we would not be surprised to see him leave Newport after the Spring business is over.
One of the sons of the late J. P. Ernstshoff, florist, Newport, Ky., died last week. E. G. GITTLE.

POUGHKEEPSIE, N. Y. The Seligman Flower Shop is distributing cut flowers for invitations in the form of a "Flower" card.

Pittsburg.
 Trade and News Notes.

Another quiet week has passed. A little business was done Saturday in the cut flower line for Palm Sunday celebration in the churches, but the plant market suffered considerably on account of the unfavorable weather. Cut stock is plentiful, particularly bulbous flowers and lilies; both are too cheap. The demand for Easter is rather uncertain, but likely, as usual, everyone will stock up and take chances. Regular Easter prices will prevail on most stock. Lilies seem to be abundant and will range from 10c upward. Blooming plants are more plentiful than last year; the stock is in better condition, particularly azaleas. Dutch hyacinths are not bought so readily, although they are offered cheap enough.

John Bader has rented a store room on Diamond street for the sale of plants and will likely continue it for the season. His stock this year is very good and well assorted. Azaleas are better than he ever before had them. Mr. Bader's sales the past two weeks are excellent and ahead of last year's.

W. E. Azne, formerly in the East End market, has stocked up a store room on Penn avenue, E. E., with fine blooming plants for Easter trade.

Breidenstein & Flemm, who moved April 1 to Liberty street, have remodeled the building and expect to be ready for business Easter week.

Club Meeting.
 The April meeting of the Florists' Club was held in the large store room of the Pittsburg Cut Flower Company on Oliver avenue, as our regular meeting place was thought too small for the exhibition of plants. The meeting was well attended. President E. Burki not being very well was not present, and the

The next meeting in May "Bedding Plants" will be the subject.
 The Botanical Society of Western Pennsylvania met last week and the features of the meeting were talks on "History of Botany in Western Pennsylvania," with a general discussion; and a "Study of our Native Trilliums."

Philadelphia.
News Gittings.
 M. C. Dunn of the Philadelphia Floral Store, 618 Chestnut street, is filling an order for St. Mary's Church, Fourth above Spruce street, for Easter decorations. This is the usual order which he has been filling every year for the past thirty years for the same church.

The cut flower market is very uncertain and the wholesalers are careful in making future prices. All the stores are preparing for a big business and laying in a large supply of plants. The general opinion is that the Easter trade will equal last year's, and some look for an increase.

S. S. Penneck-Meehan Company have a splendid stock of cut flowers at present and are kept busy these days. Sweet peas are extra fine, as are their American Beauty roses. Some very fine Ulrich Brunner roses were also seen here. This firm has excellent facilities for shipping stock, and goods are bound to arrive in splendid condition when packed by their up-to-date methods.

John Jensen, 2840 Lancaster avenue, is ready for Easter with a large number of potted plants of all kinds; he is looking forward to a good business. Mr. Jensen is one of the progressive florists of West Philadelphia.

H. Bayersdorfer & Company have an unusual demand for waterproof crepe-paper for pot covers, of which they have a splendid assortment. They are also getting large orders for plant baskets and azalea pot covers of the highest grade. The demand for air pants shows no sign of letting up. Their Memorial Day display of metal wreaths is large and they predict that they will be in great demand. Another novelty which they show is made-up baskets and set pieces fitted with electric lamps for table decoration, etc.

Wm. K. Fluck, 4407 Cherry street, is making a specialty of air brush signs and price tickets for the local flower shops, and is getting a large share of the work being done in this city.

Myers & Company will build a greenhouse, 5x116 feet, on the grounds of Ravenwood, the country home of Mrs. Frederick C. Penfield, on School lane, Germantown, Pa. The cost will be \$75,000. P. M. R.

DAYTON, O. At the last meeting of the Dayton Florists' Club, George W. Bartholomew, the retiring president, was given a vote of thanks for his services on behalf of the club, and as a token of appreciation was presented with a handsome framed picture. The growing of azaleas was the principal topic of discussion. After the meeting J. E. Young and wife took the members to see a moving picture show.

PROVIDENCE, R. I. An early morning fire on April 4 in a greenhouse on the location of J. D. Clark at 185 Tock street, did considerable damage to buildings and stock. The loss is probably covered by insurance.

writer as vice-president presided. A few more were elected to membership, but none proposed. The subject for the evening was "Easter Plants" with a display of suitable stock. The Pittsburg Cut Flower Company showed plants they are handling from Dudley & Sons of Parkersburg, W. Va., very fine hydrangeas, Baby Rambler roses, spiraeas and lilies; also L. longilorum and giganteum from König of Etna—the best yet seen. The Schenley Park conservatories displayed calceolarias, genistas, hydrangeas, box elder var., spiraeas and cut blooms of yellow callas. The Finleyville Floral Company, Ltd., of Finleyville showed cut blooms of carnations Beacon, Aristocrat, Robert Craig, White Perfection and Lady Beautiful. Blind Brothers had hydrangeas, spiraeas, Baby Rambler roses, lilies, azaleas and hyacinths. John Bader staged fine azaleas. Mr. Madsen, gardener to R. Boggs of Sewickley, showed a fine plant of Salpiglossis Luteopur.

Mr. Meyers, Altoona, Pa., who was present at the meeting, spoke of the new Spiraea Queen Alexandra, which he is growing this season and thinks well of it. None of our growers have ordered it, as it is rather too high priced for commercial use. Mr. Bader, who saw it in the East last week, thought it might be all right if lower in price and also said that the bloom changes from pink to white as it grows older.

W. Clark was asked to tell about the rose show in Chicago, he being the only one who attended from our city. He stated that the display of blooms was magnificent, but the hall was not suitable. He also thought the public did not appreciate the show as they would have done had it been held in our city. There was not enough enthusiasm shown even by the growers.

A lively discussion on lilies followed, as to the best varieties to use, the dis-

Trade Notes.
 The prospects for a good cut flower business for Easter week are anything but bright. There is hope, however, that the potted plant trade will make up the deficiency. Several extremely warm days have brought fruit and ornamental trees into flower.
 The national sculpture exhibition has been a great attraction, and thousands of visitors are attending it. The decorations are practically limited to hardy evergreens and hundreds of palms and other exotics. Great quantities of cedar, laurel, kalmia and spruce were used in covering the 16 blocks between the promenade paths. The green effect, statuary, bronzes and general floor arrangements have been pronounced by visiting sculptors as superior to any exhibition of a like character ever held by the National Sculpture Society. M. Jusserand, the French Ambassador, took occasion to especially praise the work of E. A. Seidowitz and Charles L. Seybold in bringing about such an exquisite green effect in their style of decoration of an Italian Garden parterre. The Gardeners' Club did not exhibit any blooming plants, but several members, together with the park department, furnished palms and other plants in great numbers.
 The show opened with a banquet which was held in the center of the hall among the equestrian statuary. S.

Washington, D. C.

The Club Banquet.

The Florists' Club of Washington held its annual banquet on the evening of April 7 at Freund's banquet hall. The occasion was one of good fellowship and was largely attended. Retiring President Bisset, whose official duties had made him so prominent and popular, introduced the new president, Fred. H. Kramer, to the assembly. Jos. R. Freeman acted as toastmaster. Wm. E. Gude presented Mr. Bisset with a sterling silver fruit dish in recognition of his efficient service. In making the presentation Mr. Gude said: "You will notice it is for fruit and sweet things. May it ever be filled to overflowing with the sweet things of life, which you so well deserve because of the loving kindness of your life and the fruits of your labors so admirably performed. You will notice further that it is sterling. That is emblematic of the sterling thought you have given this organization and its members, the sterling good wishes, the sterling appreciation, and the undying good will of your fellow-florists."
 Mr. Bisset thanked the donors and wished the club continued success. Among others who spoke were: Vice-President Robertson, Z. D. Blackstone, George Shaffer, Adolph Gude, George Cook, Charles McCauley, and several others.
 Professor Charlamagne Koehler entertained the club with his humorous recitations and fun and was elected to honorary membership in the club. The hall was magnificently decorated with various kinds of cut flowers and growing plants and an orchestra furnished music throughout the evening.

Fruit trees are in full blossom and indications point to a heavy yield. The local trade is awakening to a strenuous life and preparing for the Easter rush. Cool weather is favoring stock, and the quality should be quite good.
 JAS. L. CARRERY.

Detroit.

Trade and News Notes.

There are no apparent changes in the general business conditions hereabouts; still, we are looking forward to a prosperous Easter. This hope is somewhat justified by numerous bookings of Easter orders. The stores in general are beginning to prepare for the occasion, and good displays of Baby Rambler roses, lilies and azaleas are making.
 Fred. Schmidt, who had charge of Newberry's place in Grosse Pointe, has left there and will start a greenhouse plant near the Woodlawn cemetery. Thos. Evans of Marshalltown, Pa., has taken the place occupied by Mr. Schmidt.
 The City Service League, a child of the local Board of Commerce, has just been ushered into the world and is already most vigorously prosecuting its duty of beautifying Detroit. Recently the Detroit Opera House was crowded with men and women answering the invitation of this league. Several very prominent local speakers urged upon their hearers the need of improving the front and backyards of the city. To further enthrone the public all schools will give a half holiday April 24 for the purpose of cleaning up. The broad way in which this movement is conceived and the general enthusiasm prevalent assure good results for the citizens at large and the florists' pockets in particular. Prizes of \$75, \$50 and \$25 are offered for the best yards, and a special prize of \$50 for the district best in general appearance.
 The Park Board is showing a collection of some 2,000 calcicolarias in 6 and 7-inch pots which are justly admired by the public.
 FRANK DANZER.

Indianapolis.

News Items.

CHARLESTON, W. VA. One of the largest funerals this city has ever seen was that of the late Sam. W. Starks on April 7. Deceased was the Supreme Chancellor Commander K. of P. (colored) of the world, and practically every State in the Union was represented by a delegation of Grand Lodges at the funeral. The floral offerings of the different lodges and societies were numerous and some very beautiful designs were executed. J. W. Alexander and the Charleston Cut Flower & Plant Company handling the bulk of the business.

Trade has been only fair so far this season, but the outlook for a good Easter and Spring business is promising.

The Charleston Cut Flower & Plant Company intends to build one violet house, 10x70 feet this Spring, to be devoted to violet Governor Horrick, which variety is doing finely with this firm. The last two seasons the plants were in cold frames.

Rumor has it that J. W. Alexander intends tearing down his greenhouses and building a business block on his present location, corner Washington and Morris streets, but he will hold on to the stand by opening a cut flower store in a corner room. **LITTLE MOUNTAIN STATE.**

SOUTH MERIDEN, CONN.—J. W. Davis, of the well-known Davis Market Garden Company, formerly of West Hartford, has purchased the McKenzie place. Three or four large greenhouses will be built during the coming Summer in which vegetables will be raised under glass for Winter selling. Plans have already been completed for two of the houses, one 90 and the other 120 feet long. The other two will probably be built later in the year. One of the greenhouses will be used for growing violets and carnations.

SOMERVILLE, MASS.—Theodore E., son of Mr. and Mrs. Julius Horn, died on Saturday, April 11, 1908, aged 22 years. The elder Mr. Horn is gardener for the Shaw estate, and his many friends in the trade extend their sympathy to him in his sad bereavement.

BRICKED-IN BOILERS
THE TRUTH ABOUT THEM

Bricking-in is costly it is just that much more added to the price of your boiler.

Brick bridge walls continually burn out, requiring frequent repairs in a most difficult place to reach. The bricked-in fire box boiler requires a derrick to set it.

Not so with "Burnham" Sectional Boilers. They are easy to handle, inexpensive to set and free from repairs, and their economy side not even mentioned. Then why buy a "brick-in"? "Burnham" made for hot water or steam. Burns hard or soft coal. Send for the new boiler catalog.

WEST SIDE AVENUE STATION (C. R. R. OF N. J.)
JERSEY CITY, N. J.

Have not been established 50 years, but long enough to convince the wide-awake Florist and Gardener that it is to his interest to place his work in thoroughly practical hands.

(150,000 sq. ft. glass erected in 1907 will substantiate this claim.)

And why not? My material is the best that can be secured. My iron frame construction has every modern feature that years of practical experience can embody.

And then there is the cost to be considered. Why not let us take up this important question now?

We make a specialty of Greenhouse stock for Commercial Growers of Flowers and Vegetables. Sash bars 32 feet long and over. Write for circulars and prices.

The A. T. Stearns Lumber Co.
NEPONSET, Boston, Mass.

FOR STRENGTH

You can't equal a U-Bar house, because all structural members are steel. Durability is assured by the galvanized, aluminum finish. With the great strength and durability goes increased lightness, attractiveness, wonderful productivity and low cost of maintenance.

Send for catalog.

U-BAR GREENHOUSES

PIERSON U-BAR CO.
DESIGNERS AND BUILDERS 1 MADISON AVE., NEW YORK

HOW WE ARE EQUIPPED TO DO THINGS

This view will give you something of an idea of the extent of space and number of buildings necessary to carry on the complete manufacturing of greenhouses as we do. In those buildings at the left are located the offices, designing and layout rooms; just beyond, in the rear, is the sash factory, paint and putty grinding mills, and the immense store rooms. Downstairs, the ventilating machinery is made. Across the track is the wood working mill with thousands of feet of stock on hand; and here the wood is dipped in the priming tanks. That next building is the iron working factory, where the iron frame rafters are bent and punched; the sills drilled and joint faces ground, and the houses of special design given an experimental set-up, before shipping. The rest of the buildings come so thick and fast that it's hard to pick them out. There's the galvanizing plant, having one of the largest "kettles" in the country; the foundry, casting its tons of metal every day, turning out "Burnham" boilers and all our cast iron fittings; the fireproof storage sheds, while backing them all, are those millions of feet of air-drying cypress. Send for our catalogs.

We make every part of a greenhouse but the glass. We sell any part.

IT'S THE FLORISTS' EXCHANGE

We are a straight shoot and aim to grow into a vigorous plant

A WEEKLY MEDIUM OF INTERCHANGE FOR FLORISTS, NURSERYMEN, SEEDSMEN AND THE TRADE IN GENERAL

VOL. XXV. NO. 17

NEW YORK AND CHICAGO, APRIL 25, 1908

One Dollar Per Year

CARNATION CUTTINGS

We are in unusually good position to supply exceptionally well-rooted, healthy stock. We have such a large quantity of flowering plants that we propagate only from heel cuttings from flowering shoots. Our cuttings are rooted in light, sunny, airy houses, and we are sure will satisfy the most critical buyer.

A prominent carnation grower writes: "You seem to be THE ONLY FIRM IN THE BUSINESS THAT KNOWS HOW TO PACK STOCK AND HAVE IT REACH THE BUYER IN GOOD CONDITION, and I have always found your cuttings cheaper than the same varieties from others at much lower figures."

While our prices may not always be the cheapest, we certainly can give, quality considered, as good value as, if not better than, is obtainable anywhere.

WINSOR which we introduced last year has proven to be the finest novelty introduced in years. We think it is the most profitable variety grown to-day, considering its fine color, splendid keeping qualities, and productiveness. When properly grown, it leaves little to be desired, and almost everyone succeeds with it.

White Enchantress

the best all-round white carnation, on account of its large size, long stem, earliness, and productiveness. Our White Enchantress, exhibited at the Carnation Convention at Washington, was the only White Enchantress exhibited that received an award.

Strong-rooted cuttings, now ready for delivery, from sand, \$6.00 per 100, \$50.00 per 1000; from soil, \$7.50 per 100, \$60.00 per 1000.

Buyers will find transplanted stock offered from soil well worth the difference to price.

F. R. PIERSON CO., Tarrytown-on-Hudson, New York

We offer, also,

BEACON and RED CHIEF, from sand, \$6.00 per 100, \$50.00 per 1000; from soil, \$7.50 per 100, \$60.00 per 1000. Also

VICTORY, MELODY and WHITE PERFECTION, from sand, \$4.00 per 100, \$35.00 per 1000; from soil, \$6.00 per 100, \$45.00 per 1000.

VARIEGATED LAWSON, WHITE LAWSON and RED LAWSON, from sand, \$3.00 per 100, \$25.00 per 1000; from soil, \$4.00 per 100, \$35.00 per 1000.

We can supply, also,

WINONA and AFTERGLOW at \$12.00 per 100, \$100.00 per 1000.

Vaughan's Asparagus Plumosus Nanus

We handle this Asparagus both in seeds and plants of all sizes, in very large quantities and make very close prices on larger amounts on application. Our seed is pure, fresh, of best germinating quality and extraordinary vitality.

Northern Greenhouse-Grown Seed.
Per 100 seeds, 60c.; 250 seeds \$1.25; 1000 seeds, \$4.00; 5000 seeds \$19.50; 10,000 seeds, \$37.50. Price for larger lots on application.

TUBEROSES

True Dwarf "EXCELSIOR" Strain.

Our stock of Excelsior Pearl has been bred up by many years of careful selection from bulbs producing the shortest stalks with full heads of double flowers. But two or three firms can supply this extra dwarf "Excelsior" strain. First size bulbs, 100 \$1.00 1000, \$9.00.

TUBEROUS BEGONIA

Single white, yellow, pink and scarlet 35c. per doz., \$2.50 per 100; single mixed 30c. per doz., \$2.25 per 100; double white, yellow, pink and scarlet 60c. per doz., \$4.50 per 100; double mixed 50c. per doz., \$4.00 per 100.

CALADIUMS—Elephant's Ears.

GERANIUMS

A splendid stock of fine plants from 2 1/2 inch pots, good standard sorts and new varieties, \$2.00 per 100 and up to \$1.00 each. We will send 1000 in good varieties our selection for \$18.50.

NOVELTIES, 1907 introductions, from Bruant, Lemoine, Boncharlat and Cunnell, one each of 50 varieties our selection, including single and double, for \$5.00.

Our special descriptive Geranium catalogue describing over 200 varieties of Geraniums and Pelargoniums mailed free to the trade.

PELARGONIUMS in good variety, strong plants, 2 1/2 inch pots, \$1.50 per doz., \$6.00 per 100.

HARDY CHRYSANTHEMUMS Our collection of Hardy Chrysanthemums will compare favorably with any in the country and we have an immense stock ready for shipment. Small flowered or Button Variety, \$2.00 per 100; large flowered or Astoria varieties, \$3.00 per 100; description will be found in our wholesale list.

DAHLIA ROOTS We still have about 75 varieties. We can offer in Cactus, Decorative, Show and Pompon true to name at \$5.00 per 100 and up for whole field grown clumps. One thousand, 50 each of 20 varieties, our selection, for \$40.00, all good kinds, a splendid collection for planting or just the thing for store trade.

AMERICAN SEED TRADE ASSOCIATION
George S. Green, Chicago, Ill., president; M. H. Duryea, New York, first vice-president; F. W. Bolgiano, Washington, D. C., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; Leonard H. Vaughan, Chicago, assistant secretary.

Referring to the article on "Storing Cabbages in Denmark" on page 368, issue of March 21 last, the upper picture accompanying the text shows the method of protecting cauliflower plants for seed against frost, and not cabbages as at first stated.

"TESTING THE GERMINATION OF SEED CORN" is the subject dealt with in Circular No. 1, March, 1908, of Cornell (N. Y.) University Agricultural Experiment Station, College of Agriculture. Selection of good seed ears, method of testing germination, and care of seed corn are all described. The circular is illustrated.

PHILADELPHIA, PA. We announce with deep sorrow, the death of Mrs. Earl, mother of Howard M. Earl of W. Atlee Burpee & Company, which occurred on April 15. Mrs. Earl suffered a paralytic stroke two days previously and never regained consciousness.
Mr. Burpee's address while abroad all Summer will be care of J. S. Morgan & Company, 22 Old Broad street, London, E. C., England.

GREELEY, COL. Report has it that agriculturists and business men propose, possibly next year, to organize a company and establish a big seed house here. The bulk of the seed for the Western country has been grown by California, which is now looking toward northern Colorado to help supplement its supply of seed for which there is an increasing demand, especially for seed for garden crops. Large quantities of onions and cabbages for seed are already planted here and one farmer has contracted the growing of 100 acres of mustard for seed.

IMPORTERS OF SEEDS, ETC. April 15. - H. Bischoff & Company, 58 tubs laurel trees, one case plants; Hussa & Company, one case plants; Smith & Bolzenthal, one case plants; A. Waltraet, 90 tubs laurel trees; Kramer & Foster, two cases plants; J. Tor Kulle, 16 tubs laurel trees; Hussa & Company, two cases plants; T. C. Pollock, one case plants, 20 cases laurel trees; F. B. Vandegrift & Company, one case plants; Peck & Velsor, two bushels roots, three bags seed; W. Elliott & Sons, seven cases trees; R. F. Lang, two barrels trees; Vaughan's Seed Store, two bags seed; R. F. Lang, six cases plants; C. B. Richard & Company, 50 cases plants; P. H. Petry & Company, four cases plants; T. C. Pollock, 31 packages plants; Cleary's Horticultural Company, four cases plants; Kayser & Shields, four cases plants; T. N. Wallie, two cases plants; April 16. - Davies, Turner & Company, four packages plants, etc.; A. Held, 58 cases plants; Maltus & Ware, 70 cases plants; April 17. - H. M. Baker, 200 bags clover seed; O. Gerdau & Company, one case plants; Hussa & Company, one barrel plants; Selig & Ruckelshar, 17 bags seed; April 18 and 19. - Rooney & Spence, 23 cases plants; C. R. Abel & Company, 16 cases plants; H. F. Barrow, 21 packages plants.

GEORGE C. WATSON'S APOSTROPHE TO BURPEE. -Writing in the Market Growers' Journal of "Sponsors of the Modern Cantaloupe," George C. Watson pays the following tribute to W. Albee Burpee: "What Boswell was to Johnson, or Bolton to James Watt—that Burpee has been to the cantaloupe as we know it to-day. By his remarkable and original system of distribution through what is now known as 'the mail order trade,' he made vital many of the vagaries of nature in her perfect moments—spent a fortune and made one in the doing of it—and by his keen intelligence and unerring instinct has made the whole world his debtor. When I think of the hundreds of fine things this keen, tireless enthusiast—this genial gentleman of whom the horticultural trade the world over is so proud—has done for us in nearly every section of the vegetable and flower garden I feel like paraphrasing Burns:

"When thee, O Burpee, I forget—
Palsied be my right hand!"

ANALYSES OF SEEDS.—The Maine Agricultural Experiment Station is now mailing Bulletin 152 containing the analyses of samples of grass and other seeds collected by the Inspector and analyzed by the Station in 1907. The results of the analyses indicate that in a number of instances seeds were sold with a guaranty much too high. The timothy for the most part was clean and free from injurious weeds and on the whole the above and other grass seeds offered in 1907 showed marked advance as to quality over those of 1906. For the most part the violations of the law were due to the high guaranties placed upon seeds by the jobbing houses. These dealers met at the Experiment Station in January and arrangements were made whereby it is hoped that the future will be safeguarded. On this account no prosecutions were made for sales made in 1907. It is the intention to enforce the provisions of the law so that seeds shall be sold in accord with guaranty.

In addition to reporting the analyses made in 1907, the bulletin contains methods for testing seeds both for quality and vitality. A copy of this bulletin (152) will be sent on application. To any resident of Maine. In writing, please mention this paper. Request should be addressed to The Maine Agricultural Experiment Station, Orono, Maine.

Seed Trade Notes.

Another week of splendid business in all branches of the trade has passed. As we approach the first of May, it is expected that the enormous rush of orders experienced since the first of March will begin to ease off somewhat, but then, as always, we have the retail over-the-counter cash sales that are to follow for the next four to six weeks, which always constitute one of the most profitable features of a seed season's business.

It has been very noticeable all through the season how very conservatively the smaller dealers in seeds have from day to day placed their orders with their seedsmen. While such orders have reached a very large volume in the aggregate this season, they have represented practically seeds already sold by the smaller dealer, and then purchased by him for delivery to his customer. In other words, owing to the much advanced wholesale rates for so many seeds, the out-of-town dealer has contented himself this year by working as regards seeds on the "sales before purchasing" plan. Especially has this policy been noticeable with respect to all kinds of grass and clover seeds. The smaller dealer, who in average years carries a pretty good stock of such seeds, has contented himself with getting his orders before coming to get his seed, to very much red clover and timothy grass seed, that must be sold at approximately 30c. per

pound and \$3.50 per bushel respectively. Such a condition of affairs has of course had but one result—the farmer customer has been practically obliged to visit his nearest seedsmen to obtain his needed seed supplies, and enormously increased sales in all lines of seeds have followed, especially in grass and clover seeds, from this source of trade. It is just as impossible now as it ever was, "to sell what you have not got"; and the natural result, as always in a season of short seed stocks and long prices, is that seed planters have been more than ever before obliged to purchase directly from the seedsmen. This feature of the present season's business has added more largely to the volume of retail sales than many of us have in the great rush stopped to realize.

Now that the planting season is actually here, the many shortages in seed supplies are being most severely felt. Onion sets will end the season very short; in fact, for some weeks the seedsmen have had very few indeed for wholesale orders. Sales of white sets have been made during the past few days at \$4.50 to \$5 per bushel to dealers, which very clearly shows the strong demand; and red and yellow onion sets are even in relatively shorter supply than the white sets. Lima beans, both the dwarf and pole varieties, are also very scarce and will be sold out entirely long before the planting season for beans is well under way. All know of the great scarcity of onion seed; seed stocks are in fact giving out in all directions daily. We shall most certainly end the season of 1908 with very much depleted seed supplies.

SWEET PEA SEEDS.—In his paper read before the Boston Gardeners and Florists' Club this week, William Sim of Cliftondale, Mass., an expert cultivator of sweet peas, says: "Many seedsmen are selling seed purporting to be the early varieties, which are not the early varieties. Very few seedsmen know that there is any difference between the two, and substitute with the late varieties." It is time that all seedsmen learned how to distinguish the early and the late sweet pea seed or serious loss is likely to result to growers. Mr. Sim tells in his paper how these different varieties act under glass. Those interested should carefully read his remarks.

European Notes.

Fine dry days with a record of nearly thirteen hours bright sunshine would suit seed growers admirably if it were not for the severe frosts at night. Fully 9 degrees Fahr. are registered on the grass, and this not only delays vegetation of all kinds but must also prove destructive to the young seed shoots of Savoys and other brassicas, and imperil the safety of young seedlings.

The planting of beets has been practically completed and, with the exceptions noted above, the work has been done under most favorable conditions. As noted in this column two weeks back the acreage planted falls far short of our requirements, the diminution being fully 50 per cent. in the turnip-shaped varieties and about 25 per cent. in long and half long.

There is no surplus of yearling seed to fall back upon, so dealers must be prepared for an advance in prices, and should make early sales with caution.

The boom in clovers for which we are indebted to America continues. The sowing conditions are ideal.

The notice of the incorporation of Robert Sydenham's business as a limited company does not occasion any surprise, but the very small capital (\$75,000) causes some astonishment when the liberal amount of advertising is taken into consideration. It has long been known that "Uncle Robert" was desirous of transferring the burden to other shoulders, and one is pleased to see the names of Smith, Pressly and other tried and true helpers figuring as promoters of the new company. It may not perhaps be generally known that R. Sydenham is a jeweler and still does a very large business in that line. He will long be remembered as a prompt and abundantly ample correspondent, a genial fellow, and a keen man of business.

EUROPEAN SEEDS.

500,000 Palmetto Asparagus Roots
2, 3 and 4 Years Old

Well developed, Grown on Bloomsdale.
Trade Price, \$3.50 per Thousand.

Bloomsdale Seed Farms.

NEW CANNAS 1908

ROSEA GIGANTEA

This beautiful variety has extra large flowers which are borne in such abundance that the mass of color on each plant is amazing. Single petals are 2½ inches across; color, a deep rich rose, almost a coral carmine. Plants make a vigorous growth, producing unusually fine clumps of green foliage. Height, 4 feet. (A great favorite with visitors to our trial grounds.) Strong plants, \$2.00 each, prepaid; \$18.00 per doz. by express, not prepaid.

each other, thus giving a very attractive appearance to the flowers. Color is crimson, changing to carmine rose with an uneven edge of gold to each petal. Height, 3½ feet. Price, strong plants, \$2.00 each, prepaid; \$18.00 per doz., by express, not prepaid.

CANNA METEOR

Meteor is a vigorous grower with healthy green foliage. It is highly valued because of its magnificent flowers, fully four inches across, and abundance of bloom. Color is a deep crimson, very rich; each plant usually throws up five to six trusses of buds which continue blooming luxuriantly all Summer through. Price, plants or dormant roots, 75c. each, postpaid; \$6.00 per doz., by express, not prepaid.

GLADIO-FLORA

Remarkable for the unusual shape of the flowers, which look like large Gladiolus. Petals are not long, but short and rounded and so wide they overlap

NEW CANNAS OF SPECIAL MERIT

WILLIAM SAUNDERS

(1907) The flowers are large, of splendid form and are borne very freely in immense clusters. The color is a deep rich shining scarlet lightly dappled with crimson. Foliage is a rich bronze.

60 other Varieties. Send for list and prices

THE CONARD & JONES CO., West Grove, Pa.

VEGETABLE PLANTS

- TOMATO, Myflower, Lordhard, Enrianna, Early June Pink and Early Jewel, 30c. per 100; \$2.00 per 1000.
- BEETS, Egyptian and Crosby's, 20c. per 100; \$1.25 per 1000.
- CELERY, White Plume and Golden Self Blanching, 20 cts. per 100; \$1.25 per 1000.
- PEPPER and EGG PLANTS, ready for transplanting, 40c. per 100; \$2.00 per 1000.
- R. VINCENT, Jr. & SONS CO., White Marsh, Md.

CANNAS

- Two great Gold Medal Cannas, King Humbert 8c.; Wm. Kasting 5c.; Brandywine, most magnificent bronze-leaved bedder, 3c.; Egandale 2½c.; Crimson Bedder, a superb canna 2c.; started plants or dormant roots.
- GERANIUMS, S. A. Nutt, Hill, Poltevine, Jean Vland (pure pink), 2 ½ in., A No. 1 stock, \$2.50 per 100. Cash.
- N. A. CORLIN, Elberon, N. J.

CATALOGUES RECEIVED.

GEORGE HOLLIS, South Weymouth, Mass.—Illustrated Catalogue of Peonies—a comprehensive and interesting assortment.

AUGUST HAERENS, Somergem, near Ghent, Belgium (August Röker & Sons, New York, agents for the United States and Canada).—Trade Price List of Indian Azaleas, Palms, Araucarias, Ficus, Rhododendrons, Bay Trees, etc. There is offered an interesting list of Novelties in Azaleas, including the Star of Somergem, which is figured in color as a front cover design.

NIMMO & BLAIR, Dunedin, New Zealand.—Catalogue of Fruit, Field and Garden Seeds, Fruit Trees, Implementations, etc. The catalogue is handsomely illustrated, and contains a colored insert of the firm's two new annual Chrysanthemums, Morning Star and Evening Star. Among the Carnation offerings of this enterprising house we observe several of the American varieties are listed.

CANNAS

Our selection, \$15.00 per 1000, \$1.75 per 100

DAHLIAS

The Leading Varieties for Florists

Prices of named varieties of Dahlias field-grown whole clumps, 40c. per doz. \$3.00 per 100; \$25.00 per 1000. All kind mixed, 30c. per doz.; \$2.50 per 100; \$20.00 per 1000.

CALADIUM

Caladium Esculentum—(Elephant's Ear)
Bulbs measuring 6 to 8 inches in circumference, 25c. per doz.; \$1.50 per 100; \$10.00 per 1000.

Bulbs measuring 8 to 10 inches in circumference, 50c. per doz.; \$3.25 per 100 \$30.00 per 1000.

Bulbs measuring 10 to 12 inches in circumference, 75c. per doz., \$5.50 per 100 \$50.00 per 1000.

TUBEROSES

Dwarf Double Pearl, "Imperial Strain," the best of all selected Bulbs, 4-6 in. circumference, 90c. per 100; \$8.50 per 1000, 3-in. circumference, 50c. per 100; \$4.50 per 1000.

SHELLROAD GREENHOUSES, GRANGE BALTIMORE, MD

HARDY PHLOX

Strong Field Grown Roots

\$4.00 per 100, \$35.00 per 1000

They are splendid plants in perfect condition, and consist of such choice varieties as Miss Lingard (best Phlox for cut flowers), Independence, Joan of Arc, La Vogue, La Soleil, Lord Raleigh, Lumineaux, Macuiata, Mrs. Jenkins, Van Goethe.

They are a bargain and are offered at price named to close out quickly.

J. T. LOVETT, Little Silver, N. J.

CABBAGE PLANTS

Jersey Wakefield, ready for field, \$1.25 per 1000. Tomato, all kinds, \$1.50 per 1000.

J. C. SCHMIDT, Bristol, Pa

HYBRID TEA ROSE KILLARNEY

Dreer's Offer of Select Roses

STRONG TWO-YEAR-OLD PLANTS in 5 and 6-inch pots, specially prepared for outdoor planting.

The Roses which we here offer are field-grown stock, either American grown or plants that have been imported from England and Ireland. We handle no Holland grown Roses.

These plants are all potted up during December and January, and were stored in cold houses; they are now growing freely and are in prime condition to sell to your retail trade; all are in 5 and 6-inch pots, according to variety.

Hybrid Perpetual, Moss and other Hardy Roses. Strong two-year-old Plants, nearly all in 6-inch pots.

(71) **Sweet Peas for Forcing.**
Please name some of the best sweet peas for forcing in colors, and where to obtain the seeds. I would like more colors than are mentioned in a recent issue.
A. L. R.

—For further varieties of sweet peas, other than were mentioned in our recent number, we would refer you to any of the seedsmen's catalogues.

(72) **Paint for Greenhouse Pipes.**
—Can heating pipes in greenhouses be painted to keep them from rusting, and what do you consider the best preparation to use, steam heat being employed? Do you consider the use of galvanized pipe an advantage?
H.
Ohio.

—To keep pipes from rusting there is no better paint to use than that made by mixing lamp black and boiled linseed oil. We never heard of galvanized pipes being used for heating purposes, and do not believe there is any advantage in doing so.

(73) **Violets in Frames.**—We propose to plant violets in cold frames. In Winter, of course, the glass will be covered with mats. Our Winters here are not severe. What variety would you recommend of double and single? We would not expect them to do anything like what they would with the usual treatment, but would probably get enough flowers for our local trade.
W. & N.
New Jersey.

—For varieties of violets to grow in cold frames we would recommend for double Marie Louise, and for single the new variety Boston. Bank up the outside of the frames with a good thickness of stable manure and protect the plants with mats in the severest weather, and the violets will come out all right.

(74) **To Increase Fancy Caladiums.**—How can I increase fancy caladiums? I have bedded my bulbs to sprout in the open; later will remove them to a slat house. They were large bulbs with eyes, many of which were not detachable. After showing above ground, I took up a few and cut out the eyes around which numerous roots had grown. Was it an injurious proceeding? If not, I can greatly increase my stock. They are growing all right.
A. J. B.
Pa.

—Fancy caladiums are multiplied by separating the eyes or off-sets while the bulbs are dormant, but in the present case where the eyes have been separated after growth has started, we think they will be all right, seeing that they are growing right along. The fact that they are growing would demonstrate that the proceeding was not an injurious one by any means.

(75) **Raising Stocks from Cuttings.**—We have been raising Winter-blooming stocks in our greenhouse for some years and have always raised them from seed, but after planting them and waiting until they flowered we find some of them come single, and these are worthless for our purpose. Now, what we want to know is, can we take cuttings from the plants in our house and get as good plants as we can from seed? We always have very fine plants and immense flowers. By taking cuttings from the plants with double flowers we might be reasonably sure of getting double flowers again, but we are not sure of how the plants would act from cuttings.
W. & N.
New Jersey.

—There is always a certain percentage of the stocks that come single from seed. If it is desired to perpetuate the double stocks that you have, this can easily be done by taking cuttings from the best of the plants and propagating them in that way. You will then be sure of having double-flowered plants. This method was in vogue in England many years ago, employed to perpetuate many of the best varieties of stocks. The cuttings should be made of the new growths when they are about three inches long and rooted in a brisk bottom heat, potted when well rooted and from then on treated the same as seedlings.

NURSERY DEPARTMENT.

Conducted by Joseph Mehan.

AMERICAN ASSOCIATION OF NURSEYRIMEN.

J. W. Hill, Des Moines, Ia., president; C. M. Hobbs, Bridgeport, Ind., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

Transplanting Evergreens.

Time was when an evergreen was rarely transplanted until the completion of the setting out of deciduous stock, but that time is past, and nowadays orders are dug and shipped evergreens and deciduous stock all together, and so it should be. Evergreens need planting early, just as much as do deciduous trees, the earlier the better, as soon as the frost is well out of the ground and the soil is not too wet to handle.

When an evergreen is dug with all its roots with it and these roots are not allowed to become dry, there is no more risk with it than with other kinds of trees. The old way of digging them and loading them on wagons with but a sheet over the roots is followed now by but few nurserymen. Recognizing that the first duty is to keep the roots moist, as fast as dug each plant is wrapped in burlap, with a ball of soil to all that will carry it; and even those that will not hold a ball are the better for a little soil tied up with the roots to keep some moisture present. So successfully planted are such trees that customers note the difference and are more than willing to pay the cost of the wrapping up of the roots.

The reason for the failure of so many evergreens in former times was that an evergreen tree cannot recuperate from a drying out at the roots as can a deciduous subject. A deciduous tree can be buried up entirely if so desired, and though very dry will often be restored to vigor again. Not so an evergreen; if its roots are very dry it is in a fair way to refuse to grow, let its after treatment be what it will.

Popularity of Pyramidal Plants.

Those who sell trees and shrubs find a greatly increased demand for pyramidal forms of trees and shrubs, both of the evergreen and deciduous kinds. In the line of evergreens hardly a kind can be named that is not called for. It is especially notable in the case of evergreen box, yews, retinisporas and like sorts. Not only pyramidal kinds, but those of standard appearance as well are selling well, both in the evergreen and the deciduous line. While agreeing with those who think a natural growing tree or shrub is the most pleasing of all shapes, those of formal contour are much in place near buildings, pathways and similar positions. Where formal gardens are, it is often necessary that the shape of the trees and shrubs should fit the design intended; and every year sees more elaborate gardens of this description formed than before.

Besides their use in the places suggested, a pyramidal shaped tree, especially of an evergreen nature, adds to the beauty of a whole collection of trees and shrubs by contrast.

The ease with which these nice evergreens can be imported deters those from growing them who otherwise might do it, as other fields of work are open to them which pay them better. But there are many States in which such an industry could be successfully conducted were it ever deemed advisable.

Straight Stocks for Weepers.

Weeping trees, birch, beech, Kilmarnock willow, Teas' mulberry, Bungei catalpa and like kinds, look so much better when grafted on straight stocks, that a customer cannot be blamed who rejects a crooked one. This is the time to see to the work of preparing for straight stocks. Cut down to near the ground everything that will be required for grafting next season. If several shoots take the place of the one cut away, cut all away but the strongest and most central one. Let this shoot grow without stopping it at all, as side branches are not wanted, and when growth is over and grafting is to be done it can be cut off to its proper height. The Teas' weeping mulberry makes such a length of drooping shoots that but little of its trunk is seen in Summer, nevertheless it sells much better when the head is not supported by a crooked stem.

This cutting down of trees and shrubs to get a straight central shoot is practiced by all nurserymen to some extent. Anything that will push up vigorously after being cut back, as nearly all trees and shrubs will, are so treated in late Winter or early Spring. The forming of standard shrubs comes under the same rules, but sometimes these can be topped after reaching a desired height, and a head formed the same season.

Bush Ivies.

Ivies grown in pots in bush form are now quite popular. There is something in the name of ivy that strikes one favorably, associated as it is in so many ways with olden times. The bright green of the leaves of the plant renders it acceptable for use in so many ways when pot grown, and when so grown, with care in pruning it from time to time, the shape can be made almost any one desired.

As the berries of the ivy are not unattractive it will interest many to know that these bush ivies flower and bear fruit very early. Little bushes of but a foot or

Many make the mistake of supposing that *Cornus sanguinea* is the red twiggled dogwood, but it is not. It is the common European dogwood; its bark is slightly red, but not intense enough to be called red twiggled. *Cornus alba* misleads many because of its name; but no doubt it acquired it because of its white flowers. It is a pity, as its blood red bark in Winter is its most striking character.

Retinispora Plumosa Aurea.

Of all the many Japanese evergreen known in cultivation there are none so well known and esteemed as the *Retinisporas*. In every garden of any note not one but several kinds of the evergreens can be seen. And no one wonders at their popularity. There is something attractive in the least worthy one of them all, and when it comes to the best of the sorts there is hardly a limit to the satisfaction they give. Look at the lovely specimen we have had photographed, and note the elegance of its appearance! This one is called *Retinispora plumosa aurea*. It has been under the pruning knife every year but not, we are pleased to say, to the extent of injuring it, as the kult often does evergreens. There should be a slight pruning every Summer, before growth for the season stops. This causes side shoots to develop and thickens growth wonderfully. Our specimen shows what it does. It has, as it appears, its season's growth almost completed, and very soon should have a slight nipping in of the ends of the shoots, so as to thicken it still and fill up little inequalities that show. Too much pruning can easily be done, and, unfortunately, is often done. For instance, instead of pruning before growth stops, so that little feathery shoots will clothe it afresh before Winter comes, the task is left until all growth is over for the season, and then the tree has an ugly, stubby appearance all Winter and until growth has been made in Spring. The picture before us represents a type of good pruning.

Retinispora plumosa aurea

two in height will have berries on them. The bearing of berries by these plants is in accordance with the law for many vines. When there is nothing to cling to, the plant loses heart in endeavoring to grow in that way. It gives attention to fruiting instead. Wistarias, bignonias and other vines are often seen full of flowers when in bush form, a result that would not have occurred for years later had they been planted to a wall or tree where there was ample scope for them to ascend.

Massing of Ornamental Twiggled Shrubs.

Those acquainted with the bright barked dogwood, *Cornus alba*, and the willow, *Salix Britzensis*, as well as the yellow barked willow, *Salix vitellina*, know how effective they all are in the ornamentation of our grounds in the Winter season. These shrubs take on their colored bark with the incoming of the cold weather of Winter, losing it again when they meet the warm air of Spring. It is planting time now, and so attention is called to these shrubs, that those who have the planting of grounds may remember their uses. *Cornus alba* has its Winter bark of a dark red color. It is darker than that of the *Salix Britzensis*. This *salix* is called the flame willow, the name being supposed to convey the idea of its color. The *Salix vitellina* is called the yellow willow by some; others term it golden willow, and, really, both names mean about the same, and both describe the plant very well.

The best effect in planting comes from the use of a large number of plants together. They should be planted many together, all of one kind or combining the colors. Set in combination with evergreens, the latter as a background, the effect is very good. There remains to be said that the most effective colors come from vigorous young shoots, and to get these there should be a close pruning of the shrubs every Spring.

It will bear saying that in many positions this evergreen and others are better let grow as they will, just as nature directs, unless some great unnatural defect appears. On a large lawn, away from dwellings, an evergreen of entirely natural growth is far more in place than one closely trimmed. This is where the good judgment of the gardener must be shown. Many a grievous example of too much pruning exists around us, and this is why we are pleased to illustrate a tree showing good pruning.

Retinisporas delight in good soil. If well drained, we have known them to thrive well in quite damp ground; but never make the mistake of planting them in cold ground where water cannot get away easily.

Although its general good growth is what makes it valued by planters, it is the golden foliage that counts for the most. Think of the beauty of this fine tree with its golden tinted foliage! And, as already intimated, but a glance at it will confirm what we say of the general usefulness of it and all *retinisporas* of like growth, wherever evergreens are to be planted.

JOSEPH MEHAN.

WESTERN NEW YORK HORTICULTURAL SOCIETY. The Rochester (N. Y.) Democrat and Chronicle in a recent editorial pays a high tribute to the efficient work of this organization, the membership of which is now 1,136. Of President W. C. Barry the editor says:

"For more than seventeen years the office of president of the society has been ably filled by William C. Barry, of this city, and to his intelligent activity and unflagging interest much of the success of the society is attributable. As an expert, technical and practical horticulturist Mr. Barry stands at the head of his profession; for horticulture as exemplified by Mr. Barry and his colleagues in the society has come to be justly classed as an important profession."

"It is largely, if not entirely, through the efforts of this society that Western New York has reached a high position as a fruit-growing section, a position which is unexcelled elsewhere. From the beginning the society has stood for advancement, for better culture and for the uniform upright dealing which makes for success in every great as well as in every small industry."

California Plant Notes.

Of all the flowering shrubs grown on this coast, for striking effect none equals the Chinese rose, Gloire de Rosmanes, known by the common name of ragged Robin. Semi-double, the flowers, of a dark crimson color, are borne in great clusters ten months of the year if the plant is well fed and well watered. Unlike any other member of this extensively cultivated family of plants, it requires no season of rest; the only check it receives here in producing its wealth of bloom is the low temperature that sometimes prevails during the Winter or rainy season. As a cut flower it is of no value, since the buds are borne on short pedicels, and the blooms, which soon drop their petals after opening, are undesirable for that reason. One of our largest nurseries uses it extensively as a stock for other varieties.

The merits of our native shrub *Gillia californica* as a cut flower has only recently been learned by the writer. Branches cut and placed in water developed every bud into a perfect flower, covering a period of sixteen days. The foliage of this subject is short, sharp, and so rigid that many an enthusiast has felt its sting for hours after rushing into a clump to collect a handful of the beautiful bright flowers, the size of a quarter, getting a handful of prickles and pain at the same time. Because of this characteristic it is known as "prickly phlox."

Another of our native shrubs little known and less appreciated is *Mimulus glutinosa*, an evergreen that is found in perfection in our interior valleys where the temperature is high in Summer and low in Winter. It grows equally as well and flowers quite as profusely along the coast where fogs prevail and the temperature is more nearly the same throughout the year. The flowers are of large size, of a beautiful cream color. Payne, our wild flower specialist, recently found one with flowers almost as dark as those of *Mimulus cardinalis*.

The glory of our hillsides at present is the various varieties of "California lilac," *ceanothus*. Why this shrub has not been introduced to general cultivation is one of the unsolved mysteries of horticulture. Certainly nothing now grown for ornament excels it in beauty when in flower. The feathery panicles of bloom, 12 to 18 inches in length, some white, others light lavender colored, are as graceful and airy as sprays of *Rhus cotinus*.

The floriferous character of our sea dahlia, *Leptosyne maritima*, is wonderful when the plant is under cultivation. The one in my care has not ceased to bloom the entire Winter. The light yellow flowers are two inches in diameter, borne on strong stems 18 to 20 inches long, which makes it a fine subject for cutting. When residents of this coast who wish to embellish their grounds get wise enough to use native plants, we shall have quite as attractive places as we have with our present system of using exotics, and that, too, at much less cost of maintenance.

E. FRYER, JOHNSTOWN, PA.
Introducers and growers of carnations who supply the trade with rooted cuttings will find this a very favorable time for placing an advertisement in THE FLORISTS' EXCHANGE.

Jottings for Florists.

Now is the time to make copious notes as a guide for next Easter. Let them be explicitly and plainly written, so that they may be readily understood, and they should be placed on file where they may be found when needed. It is astonishing what comfort such notes are when consulted for future guidance.

What is the future of the trumpet-shaped lily, which has taken its place as the typical Easter flower? Our first acquaintance with it was as *Lilium longiflorum*, which some experts say is a variety of *eximium*; then came *L. Harrisii*, introduced and popularized by our veteran Philadelphia grower. A little later we had *L. floribundum* which Joseph Kift & Son exploited, but as both had a common origin in the island of Bermuda they gradually became known as the *Harrisii* or Bermuda lily, and now the name *floribundum* is rarely made use of in connection with the Easter lily. F. R. Pierson of Tarrytown, N. Y., was early interested in the growth and development of the lily industry in Bermuda. Then the lily disease scare began to confront the growers of lilies for Easter; other sources of bulb supplies were looked for, and for a time good results were had from Japanese grown bulbs, but the demand was so great that the Japs were put to their wits' ends to supply it, when lots of a decided mixture began to appear, possibly raised from seed without any judgment being exercised in the selection of the seed-bearing plants until much of the Japanese grown stock became of doubtful quality. Now we have the giganteum, the multiflorum, and bulbs grown in the Azores.

We expect to hear something interesting about the lilies grown in the island of Formosa in the near future. I. Rosnosky of the H. F. Michell Company will address the members of the Florists' Club of Philadelphia on this important subject at an early meeting.

I had thought in my innocence that a trumpet-shaped lily, no matter what the size, would do for Easter, but George Craig, who has been close to the retail end of the florist business practically all his life, put me wise on that point. He favors the giganteum type as being more showy, because larger, flower patrons apparently receiving more for their money.

As a general rule left over stock of genistas should be thrown away after the third year. This advice of course does not hold good when large specimens are required. We have some small plants in 3-inch pots now in bloom, the cuttings of which were put in the propagating sand the first week in November last. Those in 6-inch pots we had in bloom before Easter were rooted in January, 1907. Some of these were trained in pyramid shape, and I believe it is wise to have a few in all groups of genistas trained in that way.

What a beautiful flowering plant is the hybrid pelargonium "Alliance"! The individual flowers are large and double, and the truss is also big. The coloring is a soft and delicate blush shade, with some of the upper petals feathered with crimson. It is believed to be the result of a cross between one of the zonal pelargoniums and a variety of petatum or ivy-leaved pelargonium. It has the appearance of being a good grower and free bloomer and it ought to be a good plant to grow for Easter. I do know there are few better plants for the home than most of the ivy-leaved type of pelargoniums. I have seen them trained and grown to be quite good-sized plants in one season—eighteen inches high and fifteen inches through.

This is not the first hybrid pelargonium that has been raised between the two species above indicated. We have to be careful how we make use of the words *hybrid* and *hybridizing*, especially among carnations, now grown so extensively for cut flowers, which, according to my understanding, are the results of cross-breeding and selection, and not of hybridizing between two distinct species, as this pelargonium above referred to is.

Hardy Roses

American Grown—Superior to Imported
We have unsold at the present time the following varieties—all field grown plants, grown in our nurseries at Rochester, N. Y.:

- | | |
|---------------------|-----------------------|
| Anne de Diesbach | Prince Camille |
| Olo | Ulrich Brunner |
| Frau Karl Druschki | Crimson Rambler |
| General Jacqueminot | White Rambler |
| John Hopper | Yellow Rambler |
| Mme. G. Loize | Philadelphia Rambler |
| Marshall P. Wilder | Common Sweet Brier |
| Mrs. John Laing | Mme. G. Bruant |
| Paul Neyron | Wichuriana (The Type) |

These plants are in our storage cellars and can be shipped at any time. Prices on request.

WHITMAN, MASS.

1657 Buckingham Place,
CHICAGO, ILL.

It appears there are at least three sports from the rose Mme. Abel Chatenay, each producing darker colored flowers than the variety from which it sported, and they are known by three different names—as Red Chatenay, Alice Roosevelt, and Mrs. Potter Palmer. The question arises, Are they distinct from each other?

The name Alice Roosevelt was given to a dark colored sport of Mme. Abel Chatenay, which originated with the American Rose Company at Washington, D. C. and was named by Benjamin Durfee after being granted permission to do so by Theodore Roosevelt, President of the United States. It is understood that Mrs. Potter Palmer originated with Pochlmann Brothers Company. With whom did Red Chatenay originate?

It is stated on good authority that the rose which originated as a seedling with Paul Niehoff, Leighton, Pa., and named Aurora—and later Mrs. Niehoff—is so nearly like Mme. Abel Chatenay that experts fail to see any difference. I have heard the parentage of this rose, but cannot at this time call it to mind. One parent I believe was Bon Silene, but the other has escaped me entirely. It would be interesting to know what was the parentage of Mme. Abel Chatenay. EDWIN LONSDALE.

NEPHROLEPIS AMERPOHLI

PHILADELPHIA LACE FERN

\$12.00 per 100, \$100.00 per 1000. 5% off cash with order.

These are good strong plants that were potted November and December last.

We need the room and must move them.

Also a fine lot of 6 1/2 inch pots at 75 cents each, 25 or more at 70 cents each.

This is the most talked about fern of the lot and has been awarded a great many honors, including a medal by the Royal Horticultural Society of London and the "Kift Cup" by the Pennsylvania Horticultural Society for the most meritorious new plant introduced in 1907.

Equally as good as green for cut flowers or pot culture.

The stock here offered is in superb condition.

WILLIAM P. CRAIG, 1305 Filbert Street, Philadelphia, Pa.

PALMS

Areca Lutescens, Cocos Weddeliana, Kentia Belmoreana, Kentia Forsteriana.

GARDENIAS

(Grandiflora Cape Jessamine Buds)

One Dozen Gardenias One Week After Cutting

THE season will open extra early this year; probably by May 5th, and continue into June.

We are especially anxious to extend trade in the New England States, also in New York, Pennsylvania, Ohio and New Jersey. The average express charge to points in this zone, for flowers in large lots, is about 30c. per 100 buds.

Last year we enclosed all our long haul stock in glassine paper, and a New Jersey florist wrote, "The Gardenias came through in perfect condition, and were as fine and fresh as if just cut from our own greenhouse." This shipment was four days en route.

We have several customers in the New England States to whom we have shipped annually since 1893.

Our May sales on orders in 1907 were over 600,000 buds.

Orders should be placed early to insure acceptance.

Standard stock, good foliage and finest quality buds, per 1,000 \$7.50
Five Hundred at Thousand Rate
On orders of 3,000 or more, per 1,000 \$6.50
Less than 500 buds, per 100 85c.

THE NATIONAL FLOWER SHOW, under the auspices of the S. A. F. O. H., will be held at Chicago, November 6 to 15, 1908. William F. Kasting, Buffalo, N. Y., is chairman of the show committee.

The Easter Trade of 1908.

From the reports received from the large centers of the country, published in this week's issue, the Easter trade of the present year was in general satisfactory. The weather on Saturday was most inclement, and to an extent militated against the total sales.

It was again a plant Easter although cut flowers were also in great demand. Regarding the latter it is pleasant to note by the various reports that little or no "pickling" of stock was practiced this year.

While the volume of business done in all lines was very gratifying, the prices received were not up to those of previous years, and the aggregate returns are reported from 15 to 40 per cent. smaller than last year.

There was an abundant supply of all kinds of stock, and of good quality, especially of lilies, which, although experiencing an enormous demand, were in oversupply in some cities, particularly New York, where many thousand blooms were left unsold. This may be accounted for by the fact that lilies appear to have been grown in larger numbers than heretofore, as far as this market is concerned.

Among plants, azaleas continue to lead in popular favor. Lilies were in strong demand, as were spiraeas, hydrangeas, roses of medium-priced grades, and potted bulbous flowers. The once popular genista seems to have lost its hold, and is not now called for to any extent.

Nothing in the line of novelties is reported. We ask our readers located in the several cities from which reports have been received, to peruse carefully the remarks of our correspondents, as a guide to the needs of Easter, 1909, which comes on April 11.

THE CAMPELLIA'S CENTENARY.—P. J. Berckmans says the first camellia that was brought to the United States reached Charleston, S. C., in 1808 and the original tree is still in fair condition. It has reached a height of more than 25 feet.

The Daily Press and Easter Trade.

We have been greatly gratified to observe that this year the daily press has devoted large quantities of space to articles dealing with floral supplies for the Easter trade, prices, etc., perhaps to an extent greater than for any former similar occasion. And, best of all, the information that has been imparted has, with but few exceptions, been of a character largely lacking the exaggerations and foolish misstatements that have previously been presented.

This improvement can, no doubt, in a great measure, be attributed to a saner policy adopted by the members of the trade themselves, in furnishing correct statements concerning stock and its value to the newspaper reporters, who are dependent on the craftsmen for the data that go to make up the groundwork of the Easter flower stories appearing in the daily newspapers for perusal by the general reading public. There can be no question that the heretofore reports of alleged scarcity of flowers and consequent reputed high prices had an injurious effect on the total sales at Easter, for it cannot be gainsaid that in a large degree at least, public opinion is molded by what the people read in the daily papers.

This year the one flower singled out for exploitation in a manner somewhat different from what we have been accustomed to read about it, was the lily, regarding which it had been repeatedly and extensively reported that, on account of alleged large importations of buds from Bermuda, lilies would be sold abnormally cheap this Easter. The story of large arrivals of buds from Bermuda was greatly exaggerated; and it was the experience of some dealers that, owing to this report, it was impossible to obtain a remunerative figure for lily flowers. The subject was discussed by the New York Florists' Club at its last meeting, the consensus of opinion in that body being that the statements relative to cheap prices of lilies would prove an antidote to the former reports of excessively high rates for Easter flowers, and therefore were not an unmixt blessing. This is debatable ground, it seems to us; and from our market report this week, so far as New York at least is concerned, the sale of lilies has suffered to some extent, numbers of these flowers and plants being left over from the festival.

The reason of this seeming falling off in popularity of the lily is worth while inquiring into. It is just possible that the available supply has exceeded that of previous years. One thing is certain; this year the appropriateness of the Bermuda lily as a flower symbolical of Easter has been attacked in the daily press, as witness the following editorial article appearing in the New York Times of March 25 last, which was largely copied by other newspapers throughout the country:

The big white lily, grown in profusion in Bermuda and elsewhere to meet the annual demand for floral symbols of Easter in New York and its neighborhood, is not essentially an Easter flower, and its recent association with the commemoration of the Resurrection has no historical significance. White lilies, to be sure, figure in some of the early religious portraiture. The little white lily of the woods, a flower of early Summer, has long been associated by the poets, including Shakespeare, Keats, and Tennyson, with modesty and purity. But the big Bermuda lily is not a symbol of modesty and has inspired no poet. Apart from its religious significance, Easter is the Spring festival, and the real flowers of early Spring, the tulip, the daffodil, the wild arbutus, are its more appropriate floral symbols. We derive our name for it from Ostara, the Saxon goddess of the East and the dawn. In Latin countries they cling to variants of the Arabic "pesach" (passover) as pasqua, pasqua, pâques. If there is such a flower as "the resurrection lily," it must be the small purple lily of Palestine.

As a matter of fact, when the lily is mentioned in other seasons, we never think of Easter. "Consider the lilies of the field," Solomon, in all his glory, was not so arrayed. Flowers gorgeous in color are brought to mind. To paint them, cries Salisbury, in "King John," were "wasteful and ridiculous excess." The fleur de lys of France is blue. The tiger lily, the panther lily, the red lily are as common in botany, if not in Bermuda and the Easter markets, as the big white lily.

All the Spring flowers are, fitly, symbols of the Resurrection, the renewal of life after the killing frosts, and commerce has made the Bermuda lily a Spring flower. There are sweeter flowers and lovelier. The lately developed Easter lily resembles somewhat the blossom of the despised jimson weed, though it seems not nearly so beautiful to the artist's eye.

Just how much an article of this character, with its comparison of the lily flower to that of the jimson weed, unfavorable to the former from an artist's standpoint, as alleged, has had its influence on the sales of lilies for the Easter just passed, it is difficult to say. Unquestionably it has had an influence, and a militating one at that; how best to counteract the harmful effect created by this and kindred outbursts should receive the best consideration of those most vitally interested. Such attacks would not be likely to appear in daily newspapers carrying the advertisements of retail florists; herein may lie a partial remedy. Further, and as assisting toward the desired end the establishment of "press committees," by the florists' clubs throughout the country appears to us to be a wise measure; and the furnishing to the newspapers of correct information, as far as can possibly be done, both as regards supplies and values; the challenging of erroneous statements concerning the florist business when they do find their way into print, would be steps in the right direction.

Hearing on Mann Pure Seed Bill.

The committee from the American Seed Trade Association appointed at the meeting held in Chicago last week, and a delegation of other seedsmen, went to Washington this week, and appeared before the foreign and interstate commerce commission relative to the Mann Pure Seed Bill. There were present at the hearing President Green of the American Seed Trade Association, Charles Dickinson, Chicago; C. N. Page, Des Moines, Ia.; J. C. Vaughan, Chicago; Jerome B. Rice, Cambridge, N. Y.; E. V. Hallock, Queens, N. Y.; F. W. Bolgiano, Washington, D. C.; Henry Wood, Richmond, Va.; Mr. May, Alexandria, Va.; W. P. Stokes and Mr. Dungan, representing W. H. Maule, Philadelphia; Mr. Smith, legal adviser of the credit department of the Wholesale Seedsmen's League, Boston, representing the firms of Joseph H. Breck & Sons, W. W. Rawson & Company, Schlegel & Fottler, R. & J. Farquhar & Company; Alex. Forbes, representing Peter Henderson & Company, New York, and S. F. Willard of Wethersfield, Conn.

On Monday a delegation appeared before Mr. Mann at the Capitol and had a lengthy conference with him on the bill, pointing out those portions of the act which seem to the seedsmen desirable to change. Mr. Mann made note of the suggestions submitted, for his own personal use, and the seedsmen were very well pleased at the results of the conference, believing that they had done good work in bringing before Mr. Mann the points which they considered would bear somewhat hard on the seed trade in the practical carrying out of the act.

On Tuesday the hearing before the foreign and interstate commerce commission took place. There were present, in addition to the seedsmen mentioned, Professor Albert F. Woods, Professor W. W. Tracy, and Edgar Brown, representing the Department of Agriculture. The hearing before the committee lasted from 11 o'clock till about half-past four. Mr. Mann, who is in charge of the bill, was exceedingly patient and courteous, and gave every one a chance to state his views upon the matters at issue. Many difficult questions were asked by the members of the committee and answered by the seedsmen. The disclaimer of the seed trade seemed to interest the committee very much, and the seedsmen tried to impress upon them the fact that it would be practically impossible to make the seed trade responsible in following the crop from the time the seed was sown until harvested. The seedsmen believed that the bill would be practical and of service to themselves and the farmers if the clauses and sections were confined to seeds that were distinguishable in the grain, as against those they could tell nothing about by examination. The vagaries of germination of seeds were also fully explained; and it was pointed out that if nature failed to furnish seed of a high germinating quality, the seedsmen could not be held responsible for that condition.

Mr. Mann finally agreed to hold over the bill for the present year. This will give time to the seedsmen to further consider the matter. It is believed by all those present, that a very favorable impression was made by the seed trade delegates on the committee and on Mr. Mann himself, and that favorable modifications in the bills are likely to result from the hearing.

The Supreme Test.

The supreme test of the advertising value of a newspaper is—does it carry the bulk of the advertising? A newspaper which prints the most advertising, month after month, year after year, is always the best medium. This is true in New York, Boston, Philadelphia, as well as in Chicago.—Chicago Tribune.

This test would undoubtedly be the "supreme" one, provided every newspaper had the same rates, and adopted the same tactics. This they, fortunately, don't do. Bulk is not always a sign of good advertising service. Sometimes it is the outcome of a mania; the swollen condition being brought about by swallowing everything in sight, whether ordered inserted or not; by doubling space without authority, by throwing in cuts gratis and charging nothing for the space they occupy. To obtain bulk by tactics such as these is the easiest thing in the world. This might and does look like printing the "most advertising," but it is as delusional and foolish as the desire of the inflated toad that wanted to be taken for an ox.

The "supreme test" of the value of a trade paper, at least, as an advertising medium, is when in spite of the meanest kind of competition it carries the "cream of the advertisements" available, these carefully selected, that, too, year after year; and when advertisers, who have been lured away by unbusiness-like practices and cheap prices, instead of by remunerative service, have returned to the medium that brought them results, one the business methods of which were correct, ensuring the confidence of its subscribers and advertisers. The Florists' Exchange is in the latter category we are glad to say.

OUR READERS' VIEWS

Lily Buds from Bermuda.

Editor Florists' Exchange:

My attention has been drawn to the fact that an impression prevails among certain florists in America that large quantities of lily buds are shipped from Bermuda for the Easter trade, thereby coming into competition with stock grown from Bermuda bulbs in the United States. One statement, published in your columns I believe, shows 10,000 cases to be expected on the Easter steamer. May I be permitted to report that only 800 cases went by the SS. Trinidad, on April 11, which was the Easter steamer, as far as lily buds are concerned; and most if not all of these were sent to private families by friends staying in Bermuda, and supplied in small lots by cottagers who leave their bulbs in the little gardens about the houses.

Not a single case was sent by the large growers who supply mature bulbs in August to the trade, for they, years ago, learned that such a procedure would be distinctly against their own interests.

T. J. HARRIS,
Superintendent Public Gardens.

Bermuda.

Araucaria Imbricata.

Editor Florists' Exchange:

On reading Mr. Meehan's interesting notes in your issue of April 4, I observe he states a friend from Kentucky wants to know if the Araucaria imbricata (monkey puzzle) would winter in Delaware. Here in Northern California we often get a few weeks of quite severe weather, as low as 22 to 25 degrees of frost. About nine years ago I planted two plants of A. imbricata, about 2 1/2 feet high. They have proved quite hardy and now are about 18 feet high. They were planted in rather low ground. On my native heath in England the Winters were quite cold and long and trees of this araucaria 25 feet high were common; so I think it would be worth trying. It would be well to remember not to plant too close to a walk or drive, as the tree has quite a spread at the bottom, and if it has to be cut at all its beauty is spoiled.

I might say, since planting mine, one morning about 7 o'clock the thermometer registered as low as 8 degrees.

I hope this may interest those intending to plant this beautiful tree.

Grass Valley, Cal. ABRAM CLEMO.

Plant Traffic to South Australia.

Editor Florists' Exchange:

For several years your paper has been of great advantage to me when importing the American chrysanthemums and carnations; and in many other respects. Since the mail service from San Francisco stopped, I have not been able to import carnations, as the present route takes too long; therefore, my interest is not so keen. Your postal service is of no use to us, as the weight for parcels is only 4 pounds. I think the United States Government and South Australia should allow plants to come in up to 11 pounds, having the plants in the ball.

As you are aware, I have the honor of first introducing the American carnation to Australia, and it has taken on well for its productivity, perfume and hardiness. I hope a quick service will again come to pass, so that plants can reach us in a month. Also that you may see your way to suggest a heavier weight for parcels, (in plants especially).

North Adelaide. JAMES REGGS.
[So far as we can ascertain, the mail service between San Francisco and Australian ports is still in operation, though a change has been made in the steamship line plying between these points. The line now in operation is, perhaps, ten days slower than the one previously utilized.]

As regards parcels post traffic, it is possible for our correspondent to secure the services of an agency either at Vancouver, or Victoria, B. C., from both of which ports steamers sail to Australia, and by doing so obtain the British Colonial parcels post rates and weights. It is doubtful, however, whether any monetary gain would be accomplished by this plan.

The letter of our correspondent demonstrates the great need of a change in our parcels post regulations with foreign countries; and we her Postmaster-General Meyer, after securing his proposed improved domestic service by parcels post, will turn his attention to the foreign service. Ed. F. E.]

The Alpha and Omega of the Sweet Pea.

Editor Florists' Exchange:

On looking over the March 28, 1908, issue of your paper, I was much interested in the article by my friend, Mr. S. B. Deeks, giving an early history of the sweet pea plant, and thought that perhaps the enclosed description taken from the second volume of Curtis's Botanical Magazine, published at the Royal Botanical Gardens of England in 1787, would be of interest to your readers. It is accompanied with a full page hand-painted plate, showing one good sized full open flower and one half expanded bud of sweet pea. The flower is fully as large and handsome as the ordinary varieties of sweet pea grown now, with dark crimson standard and violet wings. It will be noted that the variety which is still listed in many catalogues as Painted Lady was evidently the most popular variety at that time, if we may judge from the prominence given it in the description. It is only within the past dozen years that it has been dropped out of most seed catalogues, being replaced by other sorts of the same pleasing color, but with larger flowers.

Des Moines, Ia. CHAS. N. PAGE.

[DESCRIPTION REFERRED TO.]

Lathyrus Odoratus. Sweet Pea, or Vetchling.

There is scarcely a plant more generally cultivated than the sweet pea, and no wonder, since with the most delicate blossoms it unites an agreeable fragrance.

The Late F. P. Davis

See Obituary page 549, issue of April 18, 1908.

Several varieties of this plant are enumerated by authors, but general cultivation extends to two only, the one with blossoms perfectly white, the other white and rose-colored, commonly called the Painted Lady pea.

The sweet pea is described as a native of Sicily; the Painted Lady variety as an inhabitant of Ceylon. They have both been introduced since the time of Parkinson and Evelyn.

It is an annual, and not a very tender one; seedling plants sown in Autumn frequently surviving our Winters.

As it is desirable to have this plant in flower for as great a length of time as possible, to have them early, we must sow them in the Autumn, either in pots or in the open border; if sown in pots, they can be more readily secured from any severe weather by placing them in a hot-bed frame, a common practice with gardeners who raise them for the London markets, in which they are in great request; others again should be sown early in the Spring, and the sowing repeated every month; they grow readily in almost any soil or situation, and by this means may be had to flower most of the year through.

If sown in pots, care must be taken to water them frequently.

AMERICAN ASSOCIATION OF NURSERYMEN.—As previously announced the thirty-third annual convention of this organization will be held at Milwaukee, Wis., June 10, 11, and 12. The annual fee was last year raised to five dollars. The Western Passenger Association announces that fares based on about two cents per mile in each direction will, within that Association's territory, be available for the convention, and have been tendered to connecting lines for basing purposes. Nurserymen intending to be present at the meeting outside of favored territories should take up the railroad rate question early so that they may obtain the benefit from the nearest point from which reduced fares are available.

The Trans-Continental Passenger Association (office, Railway Exchange Building, Chicago, Ill.) has announced special fares from North Pacific Coast points to Chicago and other eastern terminals—dates of sale June 5 and 6. Also reduced fares from California

points, date of sale June 3. The tickets will be good for 30 days and approximate one first-class plus \$10 for the round trip.

Arrangements are being completed for a special train from Chicago to Milwaukee on June 5. Messrs. Carl Cripp of Vaughan's Seed Store, and E. G. Gage of the Peterson Nursery Company, have kindly consented to act as a special local committee in Chicago to perfect arrangements as to starting time, to provide a general meeting place and to make all as comfortable and happy as possible, while the "round up" for the special train is going on. Inquiries regarding this feature of the trip may be addressed to this committee.

The exhibits committee has secured two large rooms on the first floor of the Plankinton Hotel. In these will be exhibited colored plates, lithographs, labels and all smaller exhibits. The heavier exhibits will be placed in a vacant store on the ground floor of the hotel. From present indications, there will be ample room for all exhibits. The committee desires entries for exhibits of everything that will interest nurserymen, including nursery stock, tools of all descriptions and useful office appliances, records, etc., and in fact, everything that will interest and be of benefit to the nurseryman, whether in the field or in the office. Applications for space must be made prior to the first of June, and same must be addressed to Thomas B. Meehan, chairman of the committee, Dreshertown, Pa.

Advance information which comes from the program committee indicates that the program will be complete, with papers on very interesting subjects. It is likely, however, that the program will not be so full as it has been at other meetings, leaving more time for the discussion of the various papers and for the transaction of other business.

All sections of the country are being drawn from in arranging the program. H. D. Shupson, of Vincennes, Ind., will discuss "The Pecan," thus recognizing the increasing interest in the production of nut trees. M. McDonald of Salem, Ore., will discuss "Horticultural Inspection Laws as They Affect the Nurseryman." This paper is of great importance to nurserymen, for the inspection laws of some of the Northwestern States have greatly interfered with trade in a section where fruit growing is being developed most rapidly at this time. Others who will speak are: Judge Eugene Stark, Louisiana, Mo., "A Few Points on Improvements;" J. B. Pilkington, Portland, Ore., "Elements of Success in the Nursery Business;" H. H. Hume, Glen Saint Mary, Fla., "Semitropical Thoughts for the Nurserymen."

The secretary is informed that T. J. Ferguson is making arrangements for local entertainment and outside features while at Milwaukee, and this work could not be in better or more energetic hands.

Edwin Hoyt.

Edwin Hoyt of the firm of Stephen Hoyt's Sons Company, New Canaan, Conn., died April 17, and was buried April 20. In the demise of Mr. Hoyt New England loses one of its oldest nurserymen. His age at the time of his death was 76 years. He suffered from pneumonia, with other complications, having been taken ill on Sunday, April 12.

The nursery business of Stephen Hoyt's Sons Company was started in 1819 by Stephen Hoyt, the father of the deceased. After Stephen Hoyt's death, the business was carried on by his sons, James and Edwin Hoyt, under the firm name of Stephen Hoyt's Sons. In 1901, the business was incorporated under the name of Stephen Hoyt's Sons Company, of which Edwin Hoyt became president and manager and remained so until the time of his death.

Mr. Hoyt was uniformly courteous to the younger firms of nurserymen, to dealers in nursery stock and to all customers. He was a member of the Grange and of the pomological society of the State and was considered an authority on horticultural matters. In the nursery business, to which he was strongly devoted, he was ambitious, energetic, far-seeing, and a great worker. Under his management the business grew from small to great proportions, to be one of the largest, if not, the largest nursery firm in New England; but with all his ambition, he was a just man, and no mistakes were made in his business which he would not rectify if properly explained to him. The business of the firm will be continued under new management.

Mr. Hoyt was in 1888 a member of the State Legislature from New Canaan and a member of the State Board of Agriculture, vice-president of the Board of Control of the Connecticut Experiment Station and a member of the Connecticut Nurserymen's Association, chairman of the board of trustees in the First Congregational Church of New Canaan and a member of the Board of Deacons, being also otherwise actively interested in the town in which he lived. He was president of the First National Bank of New Canaan, and had large property interests which will probably inventory from \$200,000 to \$400,000.

He is survived by his brother, James, a widow, three daughters and one son. The funeral was held at his late residence and was largely attended by people from different parts of the State and from New York, as well as by his neighbors and friends. The sad and sacred duty of bearing the remains to the grave was performed by his foreman, Edward Kelley, and his brothers, Messrs. Frank, James, and Harry Kelley, all assistants formerly in the nursery for many years.

F. E. C.

Hitchings & Company's New Factory at Elizabeth, N. J.

As Seen by the Camera and the Camera Man

When it comes to family history, you and I are decidedly bored when a man begins to tell us how his great-great-grandfather came over in the Mayflower and all that sort of thing; what interests us in these days of hustling activity is not what a certain dead man was, but what the live man is—what he stands for! Has he made good? That's the vital point.

But when it comes to large industries covering acres and acres, and shipping carloads of materials daily, it is a little different. The number of years they have been established is not only interesting, but in many cases it has much to do with our confidence in a concern.

The mere existence of an immense plant like this one just completed for Hitchings & Company, at Elizabeth, N. J., and devoted entirely to the manu-

facturing of greenhouse materials and equipment, is most convincing of itself; but when you realize that up to only 16 years ago this company devoted all its energies solely to the manufacture of boilers, it shows what a tremendous development the concern's greenhouse business is, and how it has kept pace with other manufacturing lines.

Here is a model plant—model in construction, equipment, fire protection and shipping facilities.

Eighteen months ago this was a bare plot of twenty-eight acres; to-day, fifteen and one-half acres are fenced in and utilized.

Construction of Buildings

The buildings are constructed of heavy concrete walls up to the windowsill line, with brick walls above. The lower floors are concrete, the upper,

heavy flooring, supported on yellow pine beams and iron girders. The partition walls of brick extend above the roof several feet, to prevent the spreading of fire. All door openings in partitions are equipped with self-closing fireproof doors. Every building is fitted throughout with an automatic fire sprinkling apparatus. Six fire hydrants and three fully equipped hose houses are located at various points on the grounds. In addition to the city water, they have a large storage reservoir placed near the fire pump. This pump will throw four 2 1/8-inch streams, and is kept under a constant steam pressure of 50 pounds day and night. In one sense this fire equipment may seem somewhat incidental to you, but after all it is not alone a protection for the owners, but an equally important insurance to customers. A fire that could destroy the materials for a house ready for shipment or the patterns and templets for the boilers seems impossible with such a protection.

The actual floor space in the buildings will be 76,198 square feet when the storage house, 60x205 feet, now under construction, is completed.

Now let us imagine we are walking around the plant, with a view of getting sort of a general idea of it. The first time I went over it with Mr. Armitage and Mr. Sefton, we started at the office end, but the power plant being the starting force for all the machinery, perhaps we had better commence down the line and work up.

The Power Plant

The power plant is located opposite the foundry and from here the steam generated by two high pressure boilers is carried to the two engines, one each in the foundry and the wood and iron construction shop. You will see that when the photo was taken they were still at work on the hopper of the blower system which carries all the shavings from the carpenter shop and supplies them to the boilers as fuel.

Foundry and Boiler Shop

The photograph of the foundry and boiler shop was taken from the top of the woodworking shop, looking across the space where the new storage house is being erected. In this view one is not only impressed with their size, but the large number of windows, making these buildings unusually light and easy to ventilate.

We happened in the foundry just as they were making the afternoon "pour," to cast all sorts of things, from immense boiler sections down to iron pipe and ventilating machinery parts.

The hot metal as it poured forth from the cupola vent was caught in a large ladle hung on the frame of a tram which was pushed to various parts of the building, and the metal emptied into the hand ladles from which in turn it was poured into the moulds.

Mid the glare of the hot metal, the shouts of the men, the explosions of gas in the moulds and the sharp penetrating exhaust of the compressed air cranes, it seemed as if the Old Boy himself were let loose. But each man knew his work. No false moves. In an incredibly short time, with shouts and fragments of song, a red hot boiler section was snatched from the mould by the crane and was soon landed in the cleaning room where, when cool, all sand would be removed, the rough places smoothed off with the pneumatic chipper, finally to be given a high pressure test for imperfections.

Next, we see the sections in the boiler shop, where in the clutches of a very expensive, finely adjusted machine, all six nipple holes are bored at once to an accuracy of a hundredth of an inch. After leaving this machine, the sections are assembled and the boiler set up complete and given a final test.

It was a decided relief to leave all the noise and hurried activity in these buildings and come into the open again. We passed piles of pig iron and coke, on our way to the shipping platform, where an engine was pulling out two loaded cars, and others were being filled.

The Wood Milling Shop

A little farther along were the piles of air-drying cypress. Then came the wood milling shop where all sappy places are sawed from the cypress and discarded. On the first floor are the large circular and band saws; heavy, four knife molding machines which manufacture glazing bars from the rough, moulding all four sides at once, as they pass through the machine. Along with these are other moulders for milling the ridges, sills, etc.

The huge elevator will carry a horse truck filled with lumber, to the second floor, where the sash and door making machines are placed.

On this floor are the mortising machines which bore and cut in one operation, the blind mortises for the ventilating and hotbed sash. Then there

Exterior view of Wood Milling Carpenter and Construction Shop.
View of Power House, with blower system apparatus for carrying shavings from carpenter shop direct into the furnaces.
Boiler Shop and Foundry, with elevated tank in the distance. This elevated tank is used exclusively for fire protection.

View of one of the hose houses, which owing to its complete equipment assists in keeping down the cost of insurance.

The Laying-Out Floor. On this floor the rafters and other parts of green-houses are laid out full size. Laying out is done from scale drawings. After carefully checking, templates are made, and the iron and wood work is gotten out to these templates.

Carpenter Shop in operation. By the aid of a large number of up-to-date machines shown in this picture, the woodwork can be turned out in the most economical and efficient manner.

Draughting Room. This room is fitted up in the latest and most improved style, affording every facility for accurate and perfect work.

Section of a boiler being bored. The boiler is bored and repaired in the shop shown in this cut. Bored the six inch diameter boiler for the engine. This is one of the great pieces of machinery in the shop. After the sections come from this machine, they are inspected and ready for use.

Blacksmith Shop, showing bending, cutting and built-up work. The machine which is used in the shop is the best of its kind.

Machine Shop where ventilating pipes are made. The bins in view show manufactured parts ready for assembly. Each part of an order these parts are taken from the assembly line and sent down to the shipping department.

Hitchings & Company's New Factory at Elizabeth, N. J.

ire numerous other machines which are so necessary for perfection in greenhouse wood working.

In the other half of this building are stored hundreds of made-up sash, and all the different stock roof bars, ridge, headers and so on, along with several thousand boxes of glass.

Then comes the ventilating division, where the gear worms are carefully cut, bearings turned and all drilling done, after which they are distributed in numbered bins, ready for immediate assembling and shipment.

The Machine Shop

From here we went down into the machine shop, where the frame work for the iron frame greenhouses is cut, punched and fitted, ready for immediate erection on the job. But before all this is done, the frame must be laid out on the "laying cut floor," and all angles, bends, bolt holes, etc., proven up. From here then go the instructions to the blacksmith shop, where with the aid of a gas furnace, bending table and bulldozer or bending machine, the heavy iron members are accurately shaped.

As we left this building, the complete iron frame of a show house for a Brooklyn florist was being given a trial set up. Hitchings & Company believe that if mistakes are made, the factory is the place to find them, and not on the job.

Right near the office building is hose house No. 3, fully equipped like the other houses, with several hundred feet of hose, etc., everything ready for instant use.

The Offices

The office, of course, is the keynote to the situation in every sense of the word. Here in a light and airy draughting room, the watch dogs of construction, under the direction of Mr. Durrie, reduce theories to facts. Every detail of every house, unless a stock pattern or repeat order, is drawn out and checked up. The tangles of heating installation are likewise unknotted by Mr. McArthur and his assistants.

Downstairs are the executive offices where Mr. Sefton, surrounded by a force of twelve, keeps his fingers on the pulse of the factory. From one side of his desk, every department and foreman can be reached with the factory telephone; on the long distance he is in daily touch with Mr. Armitage at the head of the sales office, 1170 Broadway, New York.

Here then is a plant with a capacity double their former one; an equipment to turn out work with greatest possible speed; while there is ample storage room to carry a large stock of materials constantly on hand. Delays in shipments can be greatly reduced. Customers are assured of an uniformity of product, from the purity of the putty to the endurance and practicalness of a completed house, whether it be an 11-foot propagating, or a 55 feet wide and 700 feet long iron frame structure.

As the huge department stores of our cities are but the outcome of a demand for an organization which could serve to the best advantage the public in its multiple phases and wants, so the manufacturing of greenhouses and their complete equipment is but the meeting of a similar demand among the thinking, up-to-date florists of to-day. This demand is certainly met in a most thorough way by Hitchings & Company in their new plant.

Stocks for Japanese Weeping Cherry.

One of the chief attractions of the lawn in early Spring is the Japanese weeping cherry, *Cerasus japonica rosea plena*. Grafted on tall stocks, as it should be, its branches, while vigorous, droop gracefully, and in the earliest of Spring days are clothed with a mantle of lovely flowers. These flowers are of a rosy pink in the bud, but when fully expanded change to white, looking like a mantle of snow, as some have described it.

As sometimes seen this beautiful weeper is grafted too low. The stocks should never be lower than 6 feet and 8 to 10 feet would often suit positions better, as the tree is such a strong grower.

The best stock for this cherry is the common Mazzard, one of those greatly used for stocks for fruiting cherries. If these stocks are set out and grown on for a year or two and then cut down to the ground in Spring, they push up a shoot which will make a height of 6 to 8 feet by Autumn, ready for grafting or budding the season following. When budded, care is required to regulate the growth as it is made. The bud is inserted on the side, and unless watched and the shoots pinched off or trained as they grow there will be a one-sided specimen. Better to place two buds, one on the side opposite to the other.

J. M.

Sweet Peas.

Read by William Sim, before the Gardeners and Florists' Club, Boston, April 21, 1908.

Introduction.

The subject which has been assigned for our consideration to-night is one that would have carried more weight had some one else more fit than I been asked to read this paper. I will, however, do the best I can, and trust you will overlook anything I may say that seems to you improper, as this is the first time I have been called upon to speak before an audience. I also invite criticism, for no doubt many of you have your own ideas, and I hope you will let them be known, for only by so doing can we expect to settle some of the points that may arise.

The sweet pea, the subject upon which I am to say a few words to-night, is one of the staples in cut flowers, ranking in this respect next to the violet. I will not go into the ancient history of the sweet pea, but confine

Interior power plant with its two 150 horse-power, high pressure boilers. Shavings from the woodworking shop are blown through a large galvanized pipe to a hopper on the roof and then automatically fed into the furnace.

Hitchings & Company's New Factory at Elizabeth, N. J.

my remarks as much as possible to the Winter or early flowering section, the advent of which I think is within the memory of the youngest member here. It is only within the past ten or twelve years that the sweet pea has been placed before the people in the Winter months. By growing the old varieties under glass it was only possible to have them at the most five months of the year. With the advent of the early flowering section it was made possible to cut flowers all the year round.

The first sweet peas I grew under glass were such varieties as Blanche Ferry, Emily Henderson, Katherine Tracy, Comtesse of Radnor and Emily Eckford. These are of the late or Summer-flowering section. These varieties when sown under glass in August would not come into bloom until the end of the following April, and seed sown in January would flower as early as that sown in August. They have a season of flowering and will not blossom before that time, no matter when the seed is sown. The early flowering sweet peas are just the opposite in this respect, for in many cases they commence to flower when only a few inches above the soil, and if sown in July they will flower in August. They make a very poor growth in Summer and do not do so well as the late varieties. In the Winter months, however, they make a very strong growth, and while making this growth they flower, and I feel safe to say that the flowers produced then are far superior to those of the late-flowering varieties.

Origin.

The origin of the Winter-flowering sweet pea is something that seems to be a mystery. There are several who claim the distinction of originating this type. A. C. Zvolanek of Bound Brook, N. J., is one who claims to be the originator. He claims that he made his first experiments twenty-five years ago, but did not succeed until he made a cross with the European vetch. In January, 1892, he found some of the plants producing flowers which were small in size, and the plants only attained the height of two feet, but by crossing and re-crossing, a strain producing large flowers on long stems, and growing six feet in height, was secured. At this time Mr. Zvolanek was not in business for himself, and raised them mainly for pleasure, and gave seed to any of his friends who wanted some. While in the employment of Thomas Young, Jr., of New York, 1895-6, he had two houses of Christmas Pink. If this story is correct it shows that he must have had them about the time he states, in order to get seed enough to plant two houses in 1895. This was three years before the variety was put into commerce by Burpee.

The origin is also claimed by Mrs. Thomas Gould of Ventura, California. This is the variety sent out by Burpee as Earliest of All in 1898. If I am right, I think this strain of Mrs. Gould's was first seen in bloom among plants of Blanche Ferry. In 1898 Mr. Zvolanek started with Emil Leuly of West Hoboken, N. J., and had at that time six houses of Christmas Pink and Florence Denzer. Now there is no difference between this Florence Denzer and Mont Blanc. They are the same in every respect. Benary of Erfurt, Germany, sent out Mont Blanc I think in 1902, or four years after Mr. Zvolanek was raising it in Hoboken, N. J. No doubt if Mr. Zvolanek would again cross the old varieties with the vetch, and secure an early flowering strain, his claim would be substantiated. He has promised to do this.

Sports.

Many claim that this strain are habit sports, that they produce flowers identical to the late varieties that they sported from. I myself do not believe they do sport, for I have grown a great many both inside and outside, and have never had one sport with me. Mr. Zvolanek, who has raised practically all the Winter-flowering varieties, says he has never had one sport with him. Mr. Zvolanek raised Christmas Captain as a result of a cross between Captain of the Blues and Christmas Pink. A grower in England claims Captain of the Blues sported with him from the late to the early type, but I believe this was only a stray seed of Christmas Captain which had in some way gotten among his Captain of the Blues, for he was growing seed of Mr. Zvolanek's at the time. I think the cause is apparent. It is also possible that if he was growing the two types side by side, cross-fertilization may have taken place, and the early flowering one may have been the result. It is claimed by some that sweet peas do not mix, but the more I grow of them the more convinced I am that they do mix more or less. There is not one variety I grow but what quite frequently exposes its pollen and pistil, so in this case what is there to prevent insects or flies from carrying the pollen? Some claim these are deformed flowers and would not go to seed anyhow; but this is not the case, for if they are left on the plants they go to seed every time and produce fine seed. I am told this is far more marked on the seed farms in California than in a greenhouse. I believe the early sweet pea is the result of a cross between the old type and some other species. I do not believe the late sweet pea can sport from the late to the early flowering, and will only believe it when I have conclusive proof that this is the case. Many growers on seeing some variety they imagined they sowed without examination immediately call it a sport. They do not stop to consider that there are many ways of that seed getting there. The seedsman and seed grower cannot always prevent the seed getting mixed.

Types.

There are three types of the early sweet pea, the wavy or Spencer type, the common type with the broad straight standard, and the incurved or hooded type. As yet the Spencer type seems to me a little soft for commercial purposes, but this fault may be remedied in new varieties. The standard, which is wavy, has not the strength of the common type, and they fold together when they are bunched in such a way as to make them look small, although the flowers are larger than those of the common type. The latter, although not so large as the Spencer type, is the best for commercial purposes; their stiff straight standards do not fold together, and the flowers remain open. The incurved or hooded are the least desirable; their flowers are incurved and look small beside those of the ordinary type. They, however, have very long, wiry stems, and some of the best fancy varieties are of this type. They also are very strong growers.

Hybridization.

Most of the varieties, with the exception of the ones sent out first, are the results of crossing the early and late varieties together. This is done at the time the two types are in bloom together. Mrs. Charles H. Totty,

Mrs. Alexander Wallace, Mrs. George Lewis, Christmas Captain, W. W. Smalley and a number of others are the results of crossing the two types together. Varieties raised by crossing the early type with the same type are usually weak growers. It seems to take the blood of the late varieties to give them constitution. I noticed this the past Winter on a batch of recessed Christmas; this was the Christmas crossed on the late flowering Blanche Ferry. There was about fifty per cent. of the old type among them, but the early flowering ones were very much stronger and produced stronger flowers on longer stems than Christmas and grew three feet higher.

Strains.

There are now strains of these sweet peas in England, Germany and Algeria. I am unable to give much information about these, as I have never managed to get any of the seed. I have seen the Algerian strain growing at Mr. Zvolanek's; they were not in flower then, but the growth and habit were identical to what we have here. He later sent me some of the flowers. They were of very poor color and variety; in fact, they were certainly ten years behind what we have here now. Flowers of the English strain resembled the Algerian strain and Mr. Zvolanek says that they are the same varieties or mixture he sold five years ago to the firms who are

show what harm can be done in not knowing what you are planting. A few years ago I painted a house with Earliest of All. I bought my seed from a reputable seed house. This turned out to be the best house of peas I had ever sown. The seed was all true and to be sure of seed for the following year I bought seed again from this same firm with the assurance that it was the same as I had purchased the preceding August. My intentions were to build another greenhouse and raise two crops, one for early, the other for late cutting. The house was built and put into the best possible condition. The seed was sown in August and all came up in fine shape. They grew lovely, but somehow or other they did not look right to me. The vines were too heavy and strong. I, however, did not like to disturb them and I allowed them to grow. The other house was planted the middle of November after a crop of mid-season chrysanthemums. I procured the seed for this house from another source. The beginning of March the vines commenced to bloom and by the first of April \$2,000 worth of sweet peas had been sold from this house. The other house had not commenced to flower the beginning of April. The vines had reached the glass and were pulled down several times. It was then deemed advisable to clear out the house and consign the vines to the rubbish heap. This was done after keeping the

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

Albany, N. Y.

EYRES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Boston, Mass.

WAX BROS., 143 Tremont St. Orders for New England States receive our careful attention. We are located in the theatre and shopping district. Telegraph and mail orders solicited. Satisfaction Guaranteed. Established twenty years.

Brooklyn, N. Y.

ROBERT G. WILSON, Fulton Street and Oreene Avenue. Deliveries anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders well cared for from all parts of the country, and delivered at Theatre, Hotel, Steamer or Residence. Telephones: Prospect 2840 and 4065.

Chicago, Ill.

HAUSWIETH, The Auditorium Florist, 232 Michigan Avenue. The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

Dayton, O.

W. G. MATTHEWS, FLORIST, 16 West Third Street. Flowers in any arrangement for all occasions for Dayton and vicinity. Personal attention given to all orders. Long distance telephones.

Denver, Colo.

THE PARK FLORAL CO., 1706 Broadway, J. A. Valentins, Prest. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Indianapolis, Ind.

BERTERMANN BROS. CO. Our facilities for executing orders in an efficient manner are unexcelled. Our shipping territory includes the surrounding states. High grade flowers; expert workmanship.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of seasonable flowers always in stock; delivery facilities perfect.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

Retailers desiring a share of out-of-town trade should be represented by a card in this column.

Easter Display in Rooms of Fruit Auction Co., New York

elling the seed. It is very hard to hold the stock of any one variety by the raiser, because it is sent to California to be grown along for seed, and while there, the seed can be carried from one place to another.

A Warning.

To those who are contemplating growing sweet peas the one important thing is to have the right seed. You may get your house in the best possible condition, yet without the right seed failure is sure to follow. Many seedsmen are selling seed purporting to be the early varieties, which are not the early varieties. Very few seedsmen know that there is any difference between the two, and substitute with the late varieties. Not a Winter passes but some poor grower gets hit hard in this way. He sows his seeds. They start fine. They grow tall, but he gets no flowers. He is paying high for his experience. I will tell you an experience of my own to

house, which was 30x360 feet, at a temperature of 50 degrees all Winter long. I was out by this deal \$6,000; this sum being based on the product sold from a house of similar size the year before. I mention this to show the seedsmen what a great injury can be done by selling something that is not true to name, and to the grower to be doubly sure before he risks too much space in something he is in doubt about. The safest way is to procure your seed in advance and test it yourself. Sow some of it, and if the plants grow strong and stocky and bush round the base of the plant you have the wrong sort for Winter-flowering; but if the plant runs up to a single stem and does not bush you have the right kind. The early type very seldom break near the ground. The one shoot forms practically the whole plant. Some side shoots are made, but these never attain the strength of the main shoot.

(To be Continued.)

Philadelphia.

Trade News.

Edward Steel, Dittman and Vaukirk streets, Wissinoming, is having great success with sweet peas and the demand for them is greater than for anything else excepting lilies, which were his best selling stock before Easter. Mr. Steel says this year's business was greater than he expected, but not as good as at previous Easters.

Thomas A. Smith, 2312 Frankford avenue, is about to celebrate his first year in business and it has been a very successful one for him. Just at this time he has an additional stand a few squares from his store where he did a large Easter trade. Mr. Smith has been in the business associated with his parents all his life and this experience has well fitted him to become one of the leaders in his field.

Mr. Heron, 1755 Chestnut street, sold out all stock which he had put in for the Easter trade and could have sold much more had the rain held off. He says business was much better than expected and will compare very favorably with that of last year.

Robert Kift, 1725 Chestnut street, states he has no kick coming, as he had a good Easter and the business was much greater than he could handle properly. This store shows some fine white birch baskets, and Mr. Kift says he sent out a large number of these filled with the more expensive plants.

George S. Faulkner, 138 South Fifteenth street, reports that he is satisfied with this year's Easter trade and that it was better than that of previous years with him.

M. J. Callahan, 3804 Market street had a run on large plants and he traces this to the fact that he sent out some very fine announcements to all of his trade, and their neighbors, which resulted in a number of new buyers, and good prices for his stock. Mr. Callahan is a wide-awake young man and hustles after the big trade of West Philadelphia, and he seems to be getting some of the best to be had.

M. Souder, 1317 Ridge avenue, says business this Easter was much better than he had expected and nearly as much as that of last year. Prices were about the same as before. He sold almost all the stock laid in. The demand was more for hydrangeas and spiraeas than for any other plants; the cut stock also went very fast.

Wm. H. Wyatt, 236 North Thirteenth street, did a larger trade than in any year previous and at very fair prices. Mr. Wyatt has a very nice place, has been in the same store for 27 years and has held the same trade for that length of time.

Ferguson & Son, 1210 Spring Garden street, were entirely sold out of bulbous stock and nearly so in all other plants, which was more than they expected to do this season. This firm has now been in its present quarters for about eight months and is getting lots of good business.

The Philadelphia Floral Store had just one azalea left at closing time and as Mr. Dunn was debating as to whether he should take it home or not, a messenger arrived with a telegram from Bangor, Me., with an order to send one large azalea to an uptown address. This was the means of cleaning his store of Easter stock. He says business is good.

R. Stahl, Eleventh above Chestnut street, is another florist who believes in sending out an announcement to his trade just before each holiday and this has always resulted in splendid business for him. All his stock went fast and at some prices as in former years. Azaleas were the best sellers, with spiraeas a close second.

George Craig, 211 South Eleventh street, says he was satisfied with his Easter trade and the result was somewhat better than he had expected, although it did not come up to the trade of last season. His leaders were azaleas and lilies. This firm had a number of designs to make and some very fine ones were turned out during the week.

H. Bayersdorfer & Company had a very busy time last week and were called upon for an unusual number of plant baskets and colored plant mats, of which they have a splendid assortment. They also show a fine lot of immortelles in all colors and made-up wreaths of magnolia leaves.

Frank I. Polites, 1418 Chestnut street, says he is pleased with the way stock went during Easter week. The leader here was azaleas, of which he had an extra good lot.

The seed store of Johnson Company at 217 Market street has been exceedingly busy this season. They are showing a healthy lot of cold storage bulbs, and expect to close them out in short time.

The Leo Niessen Company, 1209 Arch street, is showing some fine sweet peas. They report Easter trade as much better than expected, although prices were not as good as they would have wished.

S. S. Pennock-Meehan Company kept their entire force very busy all Easter week and the results were satisfactory to them. This firm is showing some fine tulips; the coloring is rich. Outside lilac is also very good and the demand brisk. Sweet peas are among the good sellers as are their special American Beauty.

The Philadelphia Cut Flower Company, 1517 Sansom street, had a nice exhibit and reports a lot of good trade last week.

Pennock Brothers, 1514 Chestnut street, did a fine business and the results are very gratifying, as their stock all went and at good prices. Their leaders were azaleas and lilies, of which they had an unusually fine assortment.

The general opinion among the trade is that they experienced a much better business than expected, and that in the majority of cases the prices were equal to those of last year. Azaleas seemed to be the leading stock, with lilies and spiraeas coming in an equal second on the list. Lilies did not sell nearly as well as expected and seem to be the only stock of which any large quantity remains. All large plants appeared to have the preference whenever shown and they were among the first sold, especially in azaleas.

The wholesalers did not get as good prices as they would have wished and stock went rather slow until the last of the week when the people commenced to buy at the prices prevailing the first of the week. Several commission houses now have a lot of lilies and other cut stock which go very slow and cheap.

P. M. R.

Baltimore.

The Easter Business.

Easter trade was very gratifying; the potted plant business was good, but the prices obtained for cut flowers were much below the average. The great quantities of stock on hand precluded the disposition to advance prices. There was plenty for everybody at reasonable figures. Our local florists made fine showings, the store windows being arranged most artistically.

Several Baltimore florists visited Washington on Saturday, April 18, on the new electric road. They struck Washington after a heavy rain, which letting up at 4.30 p. m., brought such a rush of buyers to the stores as to make the Baltimoreans imagine they were in a department store on an exceptional bargain day.

Mr. Freeman again proved himself a royal entertainer as busy as he was. He showed the visitors his new Tungsten electric lamps which are exceptionally bright and brilliant; also a number of novelties not usually seen, such as red, white, and pink flowering dogwood plants in pots of various sizes, crab apple in different varieties in full bloom. His *Glycine magnifica* and *multijuga* were especially fine; among other novelties he had *Staphylea colchica* and *narcissus* Mrs. Langtry.

In both Washington and Baltimore the displays of lilies, azaleas, and roses, and the large specimens of lilac 5-6 feet tall and 4 feet diameter were better than have ever been seen at any previous Easter. The lilies of Gude Brothers and their rhododendrons could not be surpassed.

F. H. Kramer has received his silver medal for Queen Beatrice rose from the Maryland Horticultural Society.

C. L. S.

Pittsburg.

News Notes.

The South View Floral Company, whose greenhouses are located in Carrick, Pa., have opened an office and store-room at 1726 Carson street, South Side, and are doing a general florist business, wholesale and retail.

E. C. Ludwig, the North Side market florist, has rented another building close to his store-room for workshop and storage purposes.

E. C. R.

Los Angeles, Cal.

The spirit of plant and flower shows is in the air in this part of the State. The Woman's Club of Hollywood, Mrs. Dr. Davidson, president, will hold one in Wilcox auditorium, April 30 and May 1. The catalogue of this exhibition shows that exhibitors are divided into three classes—professional, amateur, and juvenile growers of plants. It is a good idea to have the interest of boys and girls enlisted in the cultivation of plant life. Certainly in this land of perpetual Summer, without the debilitating influences of a tropical climate, the individual who would have a fine place must have, whether inherent or acquired, a great deal of tenacity of purpose, since gardening work may be successfully carried on every day of the year. To care for a garden through a rainless Summer and, as is the case this season, but two months of rain during the wet season, with a rainfall of less than eleven inches, patience and persistence are necessary to success, and it is well to cultivate these virtues in the children.

Hollywood is a beautiful residential town of several thousand inhabitants, located midway between Los Angeles and the sea, close up to the base of a low range of mountains, which protects it from the north winds, and gives it a climate where peas, beans, and all that class of vegetables are grown during the Winter season with which to supply our city markets.

The El Reah greenhouses are located at this place. It is on these grounds that are seen a clean, healthy coffee tree, *Coffea arabica*, and a shrub of *Nephrolepis longanum* furnished with foliage from the ground to their tops, both of which fruit freely. It would nevertheless be an error to suppose that coffee growing could be made a commercial success in Southern California because this one specimen is successfully grown in the open without protection.

A new house, 45x200 feet, is being added to the glass range already here for the growing of carnations and roses. Henry Turner, the superintendent, is a first-class rose grower, and a carnation enthusiast. He has 6,000 seedlings in several colors ready for the new house. In his opinion they are "world beaters." We shall see when put upon the market next season. He grows his carnations in 4-inch pots or flats, and benches them in June, with excellent results. To overcome the evil effects of the alkali in the water, referred to previously in these notes, he uses gypsum, and his roses show clean, healthy foliage, with flowers of fine form and good color. All his stock for the coming season is on own roots, except 600 each of Mrs. Jardine, and Rhea Reid grafted on manetti.

The increase in population and wealth, and the consequent demand for fine roses and carnations will lead growers into the construction of houses for that purpose, for it is a fact that climatic conditions are variable here as elsewhere, and good stock cannot be produced in the open at all times. There is an opportunity right here and now for some one with means and the ability to grow roses, carnations and chrysanthemums under glass, heated by steam or hot water, and that, too, at a handsome profit, because the supply is not equal to the demand.

P. D. BARNHART.

St. Louis.

News of the Week.

Harry Balsley, Detroit, spent the past week among the growers here with good results. His flower pots are well liked here.

Frank M. Ellis, formerly in the wholesale business here, now residing in Panama, was an Easter visitor to his family, who still reside here. He says he is doing well with his banana plantation.

Fred W. Pape has opened a new store at the corner of Park and Grand avenues. For a beginner in this location he did a good Easter business.

D. J. Bushnell, one of our leading seedsmen, departed the past week for Norway, Sweden and Paris for research in archaeological matters. The tour will last four months.

This week should be a good one for business, as a number of large weddings are to take place at which a great deal of first-class stock will be used.

St. PATRICK.

LEBANON, IND.—Fire in the greenhouse plant of Paul O. Tauer, on April 9, created damage to the extent of \$2,500.

Worcester, Mass.

Easter trade was well divided among the several florists, each one getting his share. Lilies were in abundance, averaging rather short in their growth, but of good quality otherwise. The churches used up a great many, and as Worcester is the City of Churches there are not many lilies in evidence this week. However, there will be more or less of them maturing later on. Other potted plants were not in such great variety as heretofore. Rambler roses were in profusion, but much of the bulbous stock had gone by.

Now that the Easter cut is out of the way room will be made for the bedding stock, which has been somewhat cramped, owing to the lateness of Easter. A recent visit among the growers revealed an immense number of bedding plants maturing for the fast approaching Spring sales. There seems to be a tendency toward specialties in the bedding line this season. At the greenhouses of C. D. Thayer geraniums are seen in countless numbers, the principle variety being S. A. Nutt and the old single General Grant. This latter variety is regaining its place in popularity in this section and is well deserving of it, with its gorgeous hue and its ability to stand the battling of wind and rain. Mr. Thayer finds the demand for these varieties greater than his houses are capable of holding and has leased the Neale greenhouses on Lincoln street for geraniums exclusively. He is also fitting up another range of unoccupied houses for miscellaneous stock, which under the management of his foreman, Wm. H. Johnson, is looking remarkably fine.

At Lange's greenhouses a note was made of the high grade geraniums of the new and choice varieties. At the Book greenhouses the specialties appeared to be hydrangeas and ferns of the Boston and Piersou type, two houses being devoted to ferns and one to hydrangeas. At W. J. Wood's greenhouses were seen a general line of bedding plants in fine condition in addition to his stock of violets of which he makes a specialty during the Winter months. At Sargent's greenhouses a specialty is made of chrysanthemums, violets and pansies, with, at this season of the year, a line of vegetable plants, which look very promising. At Snyder Brothers, along with their general line of bedding plants was seen a large batch of *Feverfew Little Gem*, which they use for cut flowers altogether.

At the greenhouses of F. B. Madous a large assortment of plants for urns, vases, window boxes, etc., were seen. Mr. Madous is noted for filling vases in a graceful and pleasing way, so that the plants look well and grow well.

At the Worcester Conservatories of which L. C. Midgley is proprietor, there is no attempt made with bedding plants, but in roses and carnations they rank in the first row. It would well repay a trip of a hundred miles to look upon the crop before they commence cutting. Mr. Midgley has produced some fine seedling carnations and is still at it to bring out something more wonderful than heretofore, although it would seem that carnations had reached the height of perfection already. Mr. Midgley has another range of houses devoted to violets.

At Littlefield's a general assortment of plants was seen; notable among them were a fine lot of fuchsias and coleus.

At F. E. Keyes' place the stock looked well. Mr. Keyes' specialties are pansies and tomato plants, and his frames are full of them.

M. A. Bartlett has just completed a house which he intends to plant with carnations the coming season. Mr. Bartlett is contemplating erecting another house for violets.

PORT HURON, MICH.—Asman, florist, at 323 Huron avenue, had an attractive Easter window display. In the front was a water scene and in the background "The Rock of Ages." The cross was fully eight feet high, and made of roses, lilies and other flowers, and a large number of smaly electric lights. A life sized figure of a woman knelt at the foot of the cross and an open Bible was noticed at the left. The store has been newly decorated with woodland, water, mountain and island scenery, and the large number of electric lights helps to make the establishment one of the most attractive in Port Huron.

New York. The Week's News.

White there has evidently been quite a number of weddings taking place this week, they do not seem to have created much of a demand for cut flowers or elaborate decorations; for aside from a little call for bouquets of lily of the valley trade has been extremely quiet among the retailers since Sunday.

Among plant novelties seen this Easter, the new single roses sent here by M. H. Walsh of Woods Hole, Mass., are deserving of mention. The colors represented in these single roses were red, dark pink and light pink. The plants were of immense size, and were certainly grand specimens of cultural skill.

We notice that a Chicago trade paper quoted American Beauty roses at 50c. each in this market on April 14. This misleading information is just about as near the truth as the statement made by the same writer some time ago, when he said that 7,000 orchids had been used at a certain wedding.

One of the more ambitious florists of Brooklyn monopolized too much of the sidewalk with his boxes and other paraphernalia on Saturday last and was called up by the authorities and instructed to be a bit more careful with the displaying of his stock.

The Fruitman's Guide of Saturday, April 18, contained a very complimentary notice of the daily auction sales of plants by the Fruit Auction Company. It is stated that on Good Friday the entire floor was given up to the display of Easter flowers, palms and potted plants, there being well over \$5,000 worth of goods on exhibition as samples and lots.

John Birnie, the well-known florist and literarian, spent Saturday night last in the wholesale district. Whether he was seeking pointers on the wholesale prices of cut flowers, getting inspiration for his literary work, or trying to find out where Job lives, we do not know, but he certainly seemed to be having a good time.

J. Foley, manager of the Lecakes cut flower establishment, felt particularly happy this Easter; his wife presented him a little girl on Good Friday morning.

George Saltford, who for many years has been located at 46 West Twenty-ninth street, has leased the store at 43 West Twenty-eighth street, now occupied by Alex. J. Gutman, and expects to move there about June 1. Mr. Saltford since beginning in the wholesale business has made a steady increase in the number of his consignors, and has for some time been seeking larger and more central quarters.

Dr. N. L. Britton, director of the New York Botanical Garden, has returned from Jamaica with 3,500 botanical specimens, including three varieties of orchids and two palms, which he believes have hitherto been unknown to botanists. A number of the rarer plants will be exhibited at the Botanical Garden in Bronx Park.

Frank Dominicus, a gardener sixty-two years of age, who disappeared from his home at Alpine on the Palisades a year ago and whose mind was a blank until he woke up in a hotel in San Francisco, was found dead in the woods near his home on Monday morning last. An inquest was held, and it was believed that Dominicus shot himself with the revolver that was found near his side.

On Thursday, April 23, there took place at the home of the bride, 400 West One Hundred and Fifty-third street, a very pretty wedding, the contracting parties being Miss Robertha Meiklejohn, sister of James Meiklejohn, manager of the florist department of the Hotel Knickerbocker, and John Forest Mc-

Cowan of this city. The decorations, consisting of palms, Easter lilies, etc., were very artistically arranged. Owing to the fact of the bride being a lineal descendant of a Scottish thane, a very appropriate bouquet design of Scotch heather and white roses was carried by her. Mr. and Mrs. McCowan sail on the Anchor Line steamer California on Saturday for a six weeks' trip abroad.

New Orleans.

The firm of M. Cook's Sons has been dissolved, R. Cook having withdrawn from same. The business will be carried on at the old stand by Henry Cook.

At the April meeting of the Horticultural Society an invitation was issued from A. Alost for the association to meet at his place on Gentilly avenue on May 3 for a dinner, which Mr. Alost tenders the society annually.

James Newsham, who is in Central America orchid collecting, has already shipped one large consignment, which reached New Orleans in first-class condition. There was to be seen at his place a bed of Lilium candidum in flower at Easter.

It seemed an unusual occurrence that there was a scarcity of lilies at Easter in a city where they were to be seen in abundance in private gardens. Very few of the florists were able to retard pot-grown lilies on account of the unusually warm Spring. The stores, one and all, put up fine window displays—large specimen bougainvilleas, hydrangeas, lilies, cattleyas (Mossiae), standard Baby Rambler roses, etc. There apparently was no lack of material for buyers to select from.

Herman Woescher of Gentilly road has been very successful with cucumbers; his houses are a credit to the grower. He also has one house of ferns that would be hard to beat.

CRESCENT CITY.

DETROIT.—Mr. Cox, successor to Leadley, is moving to Broadway and John R. street. This short, broad avenue, with the two oldest floral establishments, i. e., John Breitmeyer's Sons and B. Schroeter, and the principal wholesale house, The Michigan Cut Flower Exchange, is only one short block from the principal shopping district, and will soon be known as the center of the local flower trade.

GERANIUMS S. A. Nutt, Beate Poitevine, Alphonse Ricard, La Favorite, Francis Perkins, John Doyle, Jean Vland, Marquis de Castellane, 3 1/2 in. pots, \$5.00 per 100. HELIOTROPE, Chiffon and Queen of Violets, 3 1/2 in. pots, \$5.00 per 100. CANNAS, Chas. Henderson, Florence Vaughan, Duke and Queen Charlotte, 4 in. pots, \$5.00 per 100. PELARGONIUM Vaght, 2 1/2 in. pots, \$7.00 per 100. VINCA Variegata, 3 in. pots, \$3.00 per 100. SINGLE PETUNIAS, large flowering, 3 in. pots, \$2.50 per 100. VERBENAS, 3 in. pots, \$2.50 per 100. VINCA Variegata, 2 1/2 in. pots, \$2.00 per 100. AGERATUM, Dwarf Blue, 2 1/2 in. pots, \$2.00 per 100. GERANIUMS, S. A. Cultural Directions

Are leaflets written by practical men especially for the use of amateur customers.

If you have a counter trade, either in plants, seeds, flowers or bulbs, you should have a supply of these leaflets on hand to present to your customers when they seek cultural information about their purchases.

(The leaflets embrace over forty subjects.) We can supply them at \$2.50 per 1000, or 500 for \$1.50, and can make a reduction of those prices on large quantities.

At a small extra cost we can put your imprint on each leaflet.

Try a thousand and see what a help they are in selling goods.

Chicago.

News of the Week.

It seems to be the consensus of opinion in retail circles that the volume of Easter business done was little, if any, short of the business for the same season in 1907. The great abundance of stock, obtainable at unusually low prices, enabled everyone to make a big display, and this helped materially to stimulate trade, particularly in those stores depending largely on transient trade. Plants figured rather more than heretofore in the offerings, and there were extensive collections in many of the stores. Very few reports are heard of large left-over stocks, and a clean-up appears to have been the rule rather than the exception. Made-up baskets and hampers were not given a great deal of attention, although in some of the downtown stores, some particularly fine specimens were to be noticed on Saturday. Harry Rowe had quite a number on view, some quite colossal in size. At Fleischman's, also, a good showing was made, the baskets there mostly being circular in shape with long arched handles. Small baskets did not figure to any extent, their place being filled by specimen plants and groups of bulbous stock, with crepe paper or raffia coverings enlivened with a piece of ribbon. Hart's handy handle was a popular auxiliary for these simple effects.

At Hanswirth's a number of very fine specimen plants of gardenias were shown.

Some fine plant specimens were noticed at Eaton's Flower shop, among them a prodigious hydrangea, exceptionally well flowered.

Friedman made an attractive showing of flowering plants, among which were several fine ceries in different varieties. In the store windows on Michigan avenue were two wire cages, containing live chicks and ducklings, amid a well-arranged display of flowering and foliage plants.

H. R. Hughes had a very handsome window and store display. A construction representing an old French chateau occupied the end of the store. In front was a well laid out garden with an ornamental pond, having a fountain in the center. Ducklings were to be seen swimming in the pond. Walks of convenient area ran through this garden and the Easter stock laid out in the beds was available for easy inspection by customers and was as easily replaced when sold. A rustic bridge of cork bark led from one portion of the garden, over the pond, to scenic gates overlooking a painted park scene, before which the live deer kept on the premises passed at will, adding to the general effect. At night the whole was beautifully illuminated.

Frank Oechslein had a grand collection of Easter stock at his range on West Adams street. Roses, hybrid and Rambler, were his best selling specialty. In the opinion of the visitors to his establishment Rambler roses as fine in color were never seen in Chicago before.

Ernst Wienhoefer handled two carloads of lilies during Easter week.

There were many visitors on Sunday at the immense new conservatories in Garfield Park, one section of which was completely filled with flowering plants, presenting a display rarely to be seen.

At E. H. Hunt's a good holiday business is reported. The demand for the Hart handy handles was so great that a large stock was cleaned out entirely.

It is understood that N. C. Moore & Company of Morton Grove will go heavily into the culture of plants in the near future.

The E. F. Winterson Company had in stock for the Easter trade 70,000 fronds of *Adiantum cuneatum*, A. *Croweanum* and A. *Farleyense* and an immense stock of flowering and foliage plants.

The store of W. J. Smyth, Michigan boulevard and 31st street was run into by an automobile last Thursday evening, the collision almost completely demolishing the store window.

J. A. Budlong is receiving daily shipments of single and double stocks of very fine quality.

Trailing arbutus arrived in large quantities on Tuesday and figured on the counters of several wholesalers.

J. H. PEPPER.

Boston.

News of the Week.

The Easter plant and general retail trade this year has on the whole been quite satisfactory and considerably more business resulted than had been expected. The volume of the business was done on Saturday, there being little rush on Friday. Lily plants sold well, and although many of the department stores charged low figures, the prevailing values were realized in the florist stores. Dorothy Perkins and Lady Gay roses in medium or small-sized plants were good sellers. Hydrangeas went well as did azaleas, which are always Easter favorites. There was no great call for spiraeas.

There was not such a variety of plants this season as has been seen in this city at other Easters, and business was perhaps not up to that of last year; but considering the prices that have been realized all through the past Winter every one seems satisfied with the amount of business done.

Frank Edgar of the W. W. Edgar Company has been on the sick list for the past few days, but we are glad to note he is again able to be about.

Cypripedium Curtisi Nobilio
Grower, Wm. Kleinheinz, Elkins Park, Pa.

M. J. Barrett of McMulkin's was in New Rochelle last week attending the funeral of his mother, who died at the ripe age of 92 years.

Welch Brothers report an excellent Easter trade. While prices were not as good, they handled more stock than ever before and could not have done the volume of business except for the ample room and facilities of their new store.

Club Meeting.

The Gardeners and Florists' Club had a good attendance at its regular meeting on Tuesday evening to hear William Sim talk on the growing of sweet peas under glass. Mr. Sim's paper was a thorough exposition of his method of growing. Quite a discussion on some of the varieties took place, after the reading of the paper, which, by the way, Mr. Sim wound up in a poetical manner, giving a new version in rhyme of the best varieties to grow.

The club continues to increase in membership, five new members having been elected at this meeting.

On the exhibition tables were many fine exhibits, chief among which was a lot of seedling lilies, crosses of *L. philippinense* and *L. longiflorum*, from R. & J. Farquhar & Company. James Farquhar in describing his crosses told that he would have a better race of lilies in the near future.

A fine plant of hybrid *calcicolaria* from George Stewart was awarded a report of superior merit; this plant is a decided improvement over the old types of shrubby *calcicolarias*. Other exhibits included a collection of sweet peas from William Sim; *Lilium candidum* and *larkspur* from W. N. Craig; mushrooms and *Gerbera Jamesoni* from Thomas Coles and roses from George Page.

After some discussion it was voted to donate \$50 to the general fund for the Chelsea fire sufferers.

It was announced that at the next meeting F. E. Palmer would read a paper, the title of which would be "A Few Thoughts on the Art of Selling."

J. W. DUNCAN.

Pennsylvania Horticultural Society.

The regular monthly meeting of the Pennsylvania Horticultural Society was held on Tuesday evening in Horticultural Hall. Henry T. Michell occupied the chair.

Professor Stewardson Brown delivered a very interesting lecture on "Weeds and their Dissemination" which was illustrated with lantern slides. Professor Brown in opening stated that weeds were generally understood to be plants out of place, but they had their uses, and they were very important adjuncts in Nature's grand plan. Weeds are sent not as a curse on the face of Nature as some people would have us believe they were, but a blessing instead. Weeds were sent so that the husbandman would hoe his crops to get rid of the weeds and in that way cultivate the earth and make it more fruitful.

Many weeds of our acquaintance were thrown on the screen, as dandelions, plantain, the Scotch and the American thistles, the white daisy; in fact, all the weeds known to us and some that were not so well known. Professor Brown stated that the recognized weeds of European origin and which had been introduced here were more noxious and troublesome than the native article.

A vote of thanks was tendered the professor for his able and interesting lecture.

There were two very fine orchids on the exhibition table that attracted a good deal of attention and favorable comment.

A *Cypripedium Curtisi nobilio* was shown by William Kleinheinz, gardener for P. A. B. Widener, Esq., Elkins Park. This differs from the original *Curtisi* in having a longer scape and the foliage, which resembles that of *C. Lawrenceanum* in being mottled, being narrower, so agreed Charles Bond, orchid expert for Mrs. J. B. Wilson, and Alphonse Pericat, who has an establishment of his own which is devoted to the growing of orchids commercially. The pouch is unusually large, but it is for the most part a beautiful port wine color. If the dorsal was as large as that of the *C. Lawrenceanum* the flower would appear to be better balanced. The markings of the dorsal sepal reminded us of those of *C. Lawrenceanum*. The petals are very gracefully disposed and the crimson coloring is suffused throughout the whole flower. The coloring, I am assured by Mr. Kleinheinz, was much brighter under the daylight than under the artificial and somewhat subdued electric light, which I can readily believe. Mr. Bond says this variety of *Curtisi* is known in some collections as *exquisitum*. Both the species, it is said, and its variety were discovered in Sumatra.

The other exhibit was from Alphonse Pericat, and it was the most "taking" to the general observer, because it was a cuttleya, *C. Schröderae*, with rose pink flowers, and very fragrant. It looked at first glance, very much like *C. Trianae*; indeed some authorities declare it is a geographical variety of that well-known species. It had three flowers on the one scape.

The committee on awards recommended a certificate of merit to each.

EDWIN LONSDALE.

Newport, R. I.

Society Meeting.

A regular business meeting of the Newport Horticultural Society was held Tuesday evening, the 14th. President John T. Allan presiding. The premium list for the Fall show was taken up and acted upon; it is quite extensive and embraces some 76 classes, the dahlia as usual being the leading flower. Among the changes in the rules was one debaring florists' assistants from taking part in competition in floral design work, the latter being considered amateurs in this class of work. Another rule makes it compulsory upon competitors to label exhibits in all classes of plants or flowers which call for a given number of distinct named varieties.

The premium list for the rose and strawberry show has been issued and may be had by addressing the secretary, Daniel J. Coughlin, Bellevue avenue, A. McL.

EASTER TRADE REPORTS

DETROIT. Another Easter here passed into history, and we are all trying to get our own equipment, which the business for the first few days was completely made up. The amount of stock of the various dealers was very good, and a much larger amount was seen than in former years. The *Hydrangea* and *Labrador* were the most popular, and the *Labrador* was especially so, after the other roses were given the black spots. Lilies in pots and out were not only in chief demand but the really enormous number on the market were sold out. The supply of plants was far below the demand. One firm having an supply of 48,000 was sold out by 4 p. m. Saturday, and the wholesale houses with 125,000 were cleaned out before that time. All potted plants were in great demand, particularly the *Baby Rambler* in bush form as well as standard. *Hydrangeas* and *azaleas* also were great favorites. *Enkays* sold well with the exception of large ones at and above \$20.

The wholesale houses cleaned up well. Lilies were sold out by Saturday noon. Azaleas followed next, and roses as a close third. Of carnations there were just enough to go round, bringing from \$2 to \$4 per 100. The call for roses of medium grade was away ahead of that of former years. *Snapdragons*, although of excellent quality, could not find many buyers.

FRANK DANZER.

LOCKPORT, N. Y. Thomas Mansfield and Charles Dole each had stores on Main street the three days before Easter; they both found lilies to be the best sellers, getting tid of every one, and even selling some that did not have an open flower. Mr. Mansfield who had a store on the street last year, says his sales were 25 per cent. less than last year's, while Mr. Dole reports trade as good as last year or better.

Fred G. Lewis found sales at least 25 per cent. less than last year's; this was partly owing to the weather. It rained from 10 a. m. Saturday until noon on Sunday and this kept a great many of the people from getting out.

Monday morning there was about four inches of snow; it did not last long for the sun came out. The way the land looks to-day it will be the first of May before we can begin to plant carnations out.

For the past two years there has been more call for *Enchantress* carnations than all the rest put together; but lately buyers are getting tired of this variety and are calling for the *Rose Pink Enchantress*.

LOCKPORT.

OTTAWA, CAN. Fairly good weather and good business have put all the florists in good humor. It looked rather disagreeable once or twice through the week; on the 16th at 7 a. m. there was 16 degrees of frost, but after the sun came out it was all right. The stock was the finest and largest we have ever had in Ottawa, in fact, the supply was so large that considerable wholesaling was done still having plenty. There was but little green material on exhibition, as there was not room for it, and it was not needed. Roses, especially *Baby Rambler* and *American Beauty*, sold quickly. Good *rhododendrons* and *lilies* at \$2 were in demand. Small *hydrangeas* at \$1 were the first to sell out; *azaleas* at \$1.50 were cleaned up. Among lilies the black-stemmed *giganteum* were the favorites; they had lots of flowers and were of medium height. This is with us decidedly the most profitable of the lilies. All small plants of lily of the valley, bulbs etc. were cleaned out. The popular prices were \$1 and \$1.50 for any kind of plant.

The demand for cut flowers was up to that of former years, sweet peas being especially called for. Roses were in fair supply, *Richmond* and *Killarney* being the favorites. Carnations, as usual filled up all the gaps. There was a very large cut of *Enchantress*, the best bringing \$1 per dozen. There was also a large cut of tulips and daffodils which sold out on Saturday night. Much to the delight of the Lord's Day Alliance, we did not have to desecrate the Sabbath by the delivery of plants and flowers, as every thing was out by 12 Sunday night.

I think all of us will say it was the best Easter we ever had in Ottawa, and we feel somewhat recompensed for the long, coal-consuming Winter.

The Ottawa Horticultural Society has started in with a record-breaking membership—\$25—the largest in Canada and every promise of having the most successful year in its history.

Continued on page 591.

PHILADELPHIA. COL. G. Fletcher has just finished spending about \$17,000 on improvements, building addition and installing modern heating and ventilating systems at his greenhouse establishment here.

NEW CRIMSON CARNATION
HARVARD

New Carnation FAUST (Brilliant Scarlet) This novelty very fine for Christmas cuttings all that can be desired. Price \$5.00 per 100, \$50.00 per 1000. Usual discount on large orders.

Mr. J. D. COCKROFT, Northport, N. Y.
NEW YORK, January 16th, 1908.

Dear Sir—We desire to congratulate you on the two varieties of Carnations, GEORGIA, and HARVARD, which you have been sending us. Georgia we consider to be the best white carnation that comes to New York, and can easily sell from 50 per cent. to 100 per cent. more than regular white. Harvard we think to be the best dark red coming here, under to sell at double the price of any other dark red. With kindest regards, we remain,
Yours truly,

TRAENDLY & SCHENCK, Wholesale Florists
Remember we Guarantee Satisfaction
Address: JAMES D. COCKROFT, Northport, L. I., N. Y.

The color is a very rich crimson. The habit is free and continuous, every shoot producing a flower. Blooms borne on long, stiff stems from 24 to 30 inches and over. Price \$12.00 per 100, \$100.00 per 1000. Usual discount on large quantities.

THE WEEK'S WORK

Timme's Timely Teachings.

Pompon Chrysanthemums.

There are almost as many ways in which chrysanthemums of the small-flowered hardy kinds may be grown and to which they willingly yield, as there are varieties. This and their claim to kindly regard everywhere places them pretty well up to the front among plants of importance commercially. Except in sections far up North, they are sufficiently hardy to be sold and recommended as the most profuse of Autumn-flowering garden perennials. Florists so located as to be in doubt on this point will do well by lifting their own stock in pompon chrysanthemums in late Fall and storing it for the Winter in frames or any other cool, safe place, and advising their customers to do likewise. The clumps mind the lifting from the field no more than do cannas or campanulas. Their propagation by cuttings or division in early Spring presents no difficulty. A rather old way, but worthy of being resorted to, if very dwarf, bushy, blossom-bedecked plants in pots for the earliest Autumn sales are wanted, is the

layering of well-advanced branches all around old plants in August. But without this it is possible to stock up in excellently formed, dwarf potted plants by making a selection from varieties of compact, low growth as now offered. These may be grown in the open during the Summer, either under continuous pot culture or in the free ground, to be dug up and potted in early September. But to be really fine it is best to let them come into bloom under glass. The taller varieties, also, when planted at once in benches and grown continuously in light, well ventilated houses, produce a much finer material for cutting than under field and indoor culture combined. The cut sprays of pompon chrysanthemums—white, yellow and bronze especially—so grown, are a more desirable, faster selling article than any of the large flowering kinds grown to sprays and offered in that form.

Sweet Peas.

It is quite safe to make another, with us the last, planting of sweet peas in ground previously well put in shape for the purpose. In recent years sweet peas sown out of doors much later than the first week in May amounted to little hereabouts, unless growers were especially favored by Providence. The late started rows lacked the vigor necessary for the production of good marketable peas, became thus unable to resist the everlasting attacks of insects of various species, one in particular, evidently an aphid, but of a larger size and more robust constitution than any seen anywhere but on outdoor sweet peas, the most formidable of pests and most difficult to combat. Success with sweet peas under open air conditions depends not so much on the selection of easiest grown and best selling varieties—though this in a measure has to do with it—as on the selection of a freely exposed position of the plot set aside for this culture, on very early planting into soil as generously enriched and worked up as any intended for free land roses, and on having the hose handy and using it freely in dry weather after the vines have taken energetic hold of the stringing or netting.

Indoor Sweet Peas.

From Autumn until now—with some rich pickings still ahead—indoor grown sweet peas were among the best paying of cut flower crops. Growers are fast learning to overcome obstacles in their way to complete success with sweet peas under glass. The Winter's niggardliness in supplying daylight and sunshine is the one drawback to this as well as other cultures, which so far it has not been possible to get the better of to the full extent of its being no longer regarded a retarding factor in the growing of even the most satisfactory of Winter-flowering varieties. But the advent of these varieties is a tremendous gain, interlinking end and beginning of the once well defined sweet pea season into one continuous circuit of remunerative production. Abundant crops for early and late Spring can be figured upon with probably the greatest degree of absolute certainty. Seeds of the medium early and best standard varieties, sown into the freshened up soil of cleared chrysanthemum benches from about December until February, as advised, are never seriously influenced by lack of sunlight in starting, unless driven too hard by fire heat. The headway in growth, slow at first but always of the sturdiest, should keep pace with the gradual gain in natural warmth, until at this season the sun has finally gained on them to the extent of becoming a too ardent suitor, likely to do harm by occasional outbursts of excessive fierceness. A light, adjustable shading over sweet peas flowering now or coming into bearing, put up during the brightest hours on sunshiny days, is a means of preventing discoloration of blooms, the premature giving out or running to seeds and short-stemmed buds of the early varieties and the shortening of the period of profitable production in general. All blooms, even unsalable nobbs, must daily be picked off, and as regards watering, this may have to be attended to twice daily at times from now on, while liquid feeding at regular intervals during the week helps to lengthen the picking season markedly, guano being the best in this case, five pounds to a barrel of water the proportion and the clear liquid, after a few days of diligent stirring and final sinking of the sediment to the bottom, the only part to be used. Insects at this season should not

Rooted Carnation Cuttings

be present on sweet peas under glass unless carried along from the days of hard firing and injudicious ventilation, proving that through some oversight or neglect the grower had been greatly remiss in letting it be so easy for the enemy to gain so firm a hold. Ventilation, often the immediate cause of greenfly appearing in the dead of Winter, is now, with the sashes opened wide all day and during the night, too, now and then, the safest of remedies for the evil, preferable to fumigation in this case.

The Geranium Disease.

The disease peculiar to geraniums has again been heard from this Spring. It comes with the beginning of warmer days, is evidently a fungoid trouble, quite formidable on some varieties and not easily held in check by any of the well-known fungicides. The first sign of its being present is often mistaken for what may happen to any geranium watered either too often or not enough at this time of year; the lower leaves wither and die off. But there is a marked difference. When neglect causes an aged geranium leaf to die off before its time it turns from green to somewhat of a bright yellow, falls off finally or is easily knocked off by the least effort. Not so if the disease is at work. The leaf does not fade into a uniformly smooth yellow surface; it starts with a shriveling at the outer rim, eats in farther, assumes a grayish dirty and later on the easily recognized brown or black hue of dry rot at its finish. And the leaves, gradually all of them more or less affected, never drop, but must be picked or cut off, though their removal does not help matters greatly, as it seemed to me, when seven years ago I tried to fight a case of the disease on my own place, which came as a surprise, indeed, where the firm belief in the absolute immunity of the zonal geranium from disease or insects so far had never been shaken. We have never been bothered with the disease since, but in answer to growers who have written me for advice, I will say that I distinctly remember that the diseased geraniums at that time, double Gen. Grant and one other light red sort, were planted in soil, too rich and containing an altogether too heavy admixture of Canada hardwood ashes from a barrel just received and bursted in unloading. The geraniums after being planted out lost all traces of the disease, and we had lost all confidence in the geraniums as the least resentful of maltreated plants. FRED. W. TIMME.

THOMAS STOCK, 251 Minot St., DORCHESTER, MASS.

Easter Trade in New York.

With the wind-up of Easter business which came on Sunday afternoon, when the dealers, both wholesale and retail, had a chance to look over what remained of the Easter stock, it was generally conceded that the trade, taking it in all its ramifications, had been quite satisfactory; and, considering the condition of business in general that had prevailed since the beginning of the year, many were indeed more than satisfied, for the lack of confidence that has been felt in the trade for some time was removed to quite an extent. Of course, it cannot be said that everything sold out; such a condition as that ever occurring again in New York is entirely out of the question, but we can safely say that there were more plants and flowers sold, even if prices did not average so high on a good many of them, than ever were disposed of before at any holiday. The weather Saturday evening was somewhat threatening; still it did not become so severe a rainstorm as to keep everybody indoors, and in spite of the drizzle, there was a general steady business done. As we said before, the high prices of former years were not reached; the volume of business, however, was greater for the Easter of 1908 than it has been in any previous year.

While immense preparations were made by the retailers to get up as elaborate window displays as possible, it was plainly apparent that speculation in large specimen plants was not so extensive as in previous years, though there was a wonderful showing of medium-sized stock of almost every description. A noticeable feature among the larger stores was the absence, or nearly so, of potted bulbous plants, such as hyacinths, tulips, narcissus and lily of the valley. Whether fewer of these were prepared by the growers this year, or whether an outlet for this class of plants has been found through another channel, we cannot say; but it is just possible that this stock was moved chiefly through the plant market and the auction rooms, and most of it found its way to the final customer through the efforts of the plant peddlers, who were seen and heard in all directions throughout the city on Friday and Saturday mornings.

It is always an inspiring sight to spend a few hours along Fifth Avenue a day or two before Easter, say between Fortieth street and the park. In this district will be seen the most elaborate displays of flowers and plants at Easter time to be found in any avenue or thoroughfare in the United States. The various hotels and club houses, all of which spare no expense to make their surroundings look Spring-like, together with the magnificent displays of the retail stores, make this part of the avenue a veritable garden. In front of some of the residences, for instance, were observed borders planted with hyacinths, pansies and daisies, every plant perfect, and placed so close together that the effect is at once charming and most Spring-like. The hotels and such buildings as have not spaces suitable for planting, are provided with urns and window boxes wherever such can be placed, these are filled with Spring plants in full blossom, all of which must have created a tremendous business for those florists who were fortunate enough to secure this class of work.

The retail windows were, each of them, a picture, and the absence of elaborate and expensive boxes, baskets and other accessories which hitherto seem to have been necessary at such times, was very noticeable. Ribbons, while used to some extent here and there, were not so prominent as has been the rule for some years past. Artificial sprays of flowers were also conspicuous by their absence, all of which would tend to show that the demand is more for natural stock.

Wadley & Smythe, Forty-second street and Fifth Avenue, had probably some of the largest specimen plants in the city. These consisted of some of the new Rambler roses, which had been grown as near perfection. It would seem, as it is possible to get them, Koratse and Hiawatha were among the varieties shown and created considerable favorable comment, with their beautiful clusters of single flowers. Another novelty at this store was climber plants carrying numerous blossoms, around high-handled baskets, the one trailing gracefully over the handle and showing off the blossoms to great advantage.

Thomas Young, Jr. had a beautifully arranged collection of azaleas, rhododendrons and hydrangeas.

Phoschmann seemed to go in for natural plants chiefly this year. For pot covers and a short moss was used, and there is nothing finer for this purpose. Specimen plants of bougainvillea, standard lilacs and rhododendrons were featured.

Thomas, 115 North-fifth street store, made a splendid setting for his windows by having boxes set on the walk,

directly underneath the window, filled with pink hyacinths and ivy trailing over and covering the boxes. One of the windows was filled with lilies in white splint wicker baskets, eight or ten plants to the basket, and a piece of plain white ribbon tied just below the flowers. This solid white effect was to our mind one of the prettiest seen in the city, and far more beautiful than was another window filled with lilies placed in gilt baskets. The white and gold was very effective, but the solid white arrangement was perhaps the more admired.

Alex. McConnell in the Arcade Building had, as usual, a magnificent collection of plants in all the best varieties obtainable. Mr. McConnell had placed forsythias all along the front of the Arcade Building, which, in addition to the display seen in his windows, made the Arcade Building one of the prominent features on the avenue. He also had a beautiful collection of made-up hampers and baskets, and magnificent specimens of bougainvilleas, flowering cherries and Hawthorns.

Jos. Leikens had just moved into a part of the store formerly occupied by the Hodgson Company at Fifty-sixth street in time to catch a portion of the Easter trade.

George M. Stump had as a window attraction a large egg made of half-inch wire mesh, painted white, in the inside of which could be seen live ducklings strutting about and enjoying themselves. As a window attraction this was an undoubted success, as was evidenced by the crowds, five or six deep, standing before it.

Myer, the retail florist at Madison Avenue, made heavy preparations in the way of plants for Easter, and required an additional store to take care of his surplus. Since becoming established here Myer has been eminently successful, and with a force of seventeen to help, it was all they could do to keep up with their orders.

At the Broadway store of J. H. Small & Sons a magnificent collection of flowering plants was assembled, which included specimen rhododendrons, Rambler roses, azaleas, hydrangeas, bononias and ericas in variety.

Young & Nugent, retail dealers, Twenty-eighth street, made a grand showing of plants in all available kinds, specimen-size azaleas being a feature.

In Thorley's Broadway store some very fine plants of cattleyas were a special feature.

While speaking of the retail trade we may mention that advertising is becoming more of a feature with the New York florists. Not only did some of them carry announcements in the daily papers, but the sandwich man was also brought into requisition, all of which is a good sign.

On Sunday morning numerous young men were seen about the city with trays fastened from their shoulders, on which were piled up roses, carnations and bulbous flowers, tied in bunches of two and three together, which they retailed at anywhere from 10c. to 25c. each, and seemed to be doing a thriving business. There were flowers for everybody, and anyone could be supplied, whether he wanted a 10c. bunch of roses or a bunch costing as many dollars.

The plants, as we said before, did not all sell, but, like the cut flowers, there were plenty of them, and to be had at any price. Azaleas could be purchased at from 25c. upward to \$25. There were more plants than ever before, and even if some were left over the plant trade in general was what may be called quite satisfactory.

The wholesale cut flower trade did not differ much from that of other years. There were plenty of flowers of all kinds, and dealers, mindful of the conditions of business, were not at any time too arbitrary and succeeded in obtaining quite good prices for everything sold almost. Some flowers were left over Sunday afternoon, but a great many had been sold, and actual cash returns will no doubt show an increase over those of other years.

One facetious writer in the daily press during the week preceding Easter said this was not going to be a lily Easter, and wherever he had obtained his information, or whether it was a blind prophecy, he certainly hit the nail on the head; for, after the business was all over, thousands of lilies were left in the hands of the dealers.

In the early morning market of the Cut Flower Exchange lilies sold at anywhere from 1c. to 8c. An occasional lot of 10c. was made, but that was an outside figure, and there was a great stock of lilies on hand which cleared out at the cheaper prices. Carnations were numerous, most of them bringing \$2 per 100, and they cleared out. Bulbous stock was plentiful and sold out satisfactorily, but at no advance in prices over those quoted the week before.

On the floor of the New York Cut Flower Company, stock of all kinds came in heavily, and asking prices were: For American Beauty, from 40c. down; Bride and Bridesmaid, 10c. and

12c. for specials, to 2c. for number two; carnations, from 8c. down to 2c.; lilac, 50c. to \$1 per bunch; lily of the valley, \$3 per 100, and by making some concession from these prices, a fairly good clearance was effected.

In the Twenty-eighth street district supplies of everything were heavy, with the possible exception of really first-class American Beauty. It was thought that these were not in any too heavy supply, and an effort was made to get 50c. each. This proved futile, however; 40c. was the top price except in one or two instances, when 50c. was reached. The morning supply of violets cleared out in good order at prices ranging anywhere from 35c. to 75c. per 100, according to quality. In spite of all the talk that one has heard about pickled stock, we can freely say that never before at Easter was there less of this class of stock than this year. Special Bride and Bridesmaid brought anywhere from 8c. to 12c. There are various kinds of specials, all depending on who is the grower; a few of exceptional quality brought 15c., but these were in a class by themselves. Richmond roses were in fair supply, but buyers did not seem willing to give over 15c. for the best grades, and where efforts were made to go beyond this figure to any extent, a clearance could not be effected. A limited supply of moss roses was in, for which 75c. and \$1 per bunch was asked. Daisies were far too plentiful, and could not be cleared out, although no advance in prices was attempted. Lily of the valley went off quite well, the best bringing \$3 per 100. There was quite a supply of mignonette, but buyers could not be induced to take this at any price, and it remained among the left-over goods. Narcissus in variety were not so plentiful as might have been expected; still no advance in prices was attempted and they cleared out fairly well. Cattleyas were in good demand and the supply was exhausted at fairly good figures. Among the carnations the white varieties were the worst to handle, but a satisfactory clearance was made on all kinds, prices running anywhere from \$2 to \$5 per 100 according to quality, with an occasional special lot bringing \$1 or \$2 more. Lilies were in enormous quantities; some very fine stock brought \$10 per 100, but these were an exception; good flowers at any time could be had at \$8, and thousands were sold at from \$4 to \$6 per 100. The afternoon shipments of violets were, in the main, of far better quality than was expected; a few specials brought as high as \$1, and some of the best of the fifties brought 75c. Of course, there were thousands sold at 40c. and 50c. per 100. The total supply of violets was about 700 boxes; these average about 2,500 to a box, so one can easily figure up the quantity of violets that arrived in the city Saturday. There was a fairly good supply of gardenias, and prices ranging anywhere from \$1 to \$5 per dozen were obtained. Callas were in ample supply, and brought from 8c. to 10c. each. Snapdragon was plentiful in some places, and realized from 75c. to \$1 per dozen. Sweet peas were in heavy supply, and no advance in price was attempted, stock clearing out fairly well.

In the middle of the day the cut flower district was very quiet indeed, but toward evening and up to midnight business took on a little spurt. The wholesale men kept open all night, but there was not much doing after 12 o'clock. Sunday morning the street was practically deserted as far as buyers were concerned, and there was still on hand a heavy supply of lilies, quite a few Richmond roses, and special grades of Bride, Bridesmaid and other teas, shorter grades being cleared out. Carnations were cleared out; violets had sold well, none left over; of gardenias, perhaps one or two hundred only were left; cattleyas sold out; lots of green material left, such as asparagus and adiantum. In fact, the latter two greens sold poorly all through Easter. When the stores were closed, however, it was generally conceded that the Easter business has been fairly good after all.

The early morning plant market at Canal and Washington streets was of a very drabgy nature all through Saturday morning, and prices were as a rule quite low. Pot lilies could be bought at anywhere from \$3 to \$5 per dozen plants, and roses at about the same figures. There seem to be fewer hybrid roses grown each year. Many of the purchasers at this early morning market—as many of them as could get room anyway—preceeded with their stock to Union Square and occupied the sidewalk all along the Broadway side to the cross-town side at Seventeenth street, spreading out their plants for display and making a retail market there which lasted until well into Saturday evening.

Wm. Elliott & Sons, the Fruit Auction Company, and Cleary's Horticultural Company all had sales of Easter plants at auction, and disposed of immense quantities of medium-sized stock. It goes without saying that there were

more plants used in this city than ever before, and so far as the general increase in the volume of business, both in cut flowers and plants, is concerned the results show that we are away ahead of any previous years.

NEW YORK.—Since Sunday the demand for cut flowers has been very slim, indeed. Asking prices for everything are about the same as were in force before Easter. There is not a great deal of stock coming in, fortunately; still there is much more than can be disposed of satisfactorily. A great many lilies are on the market, and new arrivals come in every day. Prices are no object with these; dealers are glad to move them at any figure. Fortunately, the weather keeps cool, and the crops of roses and carnations are curtailed to some extent. Smilax, asparagus and adiantum are meeting with very poor demand just now.

PITTSBURG.—Easter trade was rather disappointing to almost all, particularly the plantmen, who were up against it on account of the inclement weather. As it was a late Easter good weather was expected, but Saturday, the day before Easter, was about the worst day at that time in many years. It began to rain in the morning just about as trade was opening up and continued all day and evening until after 9 o'clock. The weather did not hurt the store trade and those who were under cover as much as those who had stands outside with an immense supply of plants, for it was expected that plants would sell better than cut flowers.

The supply of flowers was equal to the demand; some stock was too abundant, mainly lilies and bulbous flowers. Roses and carnations were choice, good fresh stock selling at about usual Easter prices. American Beauty roses were a little lower; good ones brought from \$7.50 per dozen up. Carnations were selling at retail at from \$1 for a dozen upward in the stores, while some of the street stands sold them as low as 35c. Violets were in fair demand, retailing at from \$1 per bunch of 50 and more, but quite a few thousands were left unsold. Lilies were too plentiful, but prices held up pretty well—about \$2.50 to \$3 per dozen retail. The stock was good, but one fault was too many flowers and buds on one stem. Bulbous stock went slowly, tulips being in best demand. Narcissus were a glut, selling at any price, with many left on dealers' hands.

In the plant trade azaleas sold better than was expected, although the supply was heavy. Genistas have apparently lost their hold, fewer of these selling each year. Hydrangeas were fine. Rambler roses went fairly well; Tausendschön was much admired, but not many were in the market. Cinerarias, primulas and geraniums made up variety and Begonia Vernon was also conspicuous. Dutch hyacinths were never before so plentiful; the North Side market was overloaded and in the evening hyacinths were sold as low as 5c. per 4-inch pot plant. Tulips and narcissus in pots and pans also suffered, particularly the latter. It was a hard blow for people who were selling plants outside, for the rain hurt almost everything that was unsold.

Orders for plant decorations in the churches were good, many flowers were used for Easter services. The store men in the city had good displays in their windows and rooms and the principal East End stores, with their large windows and conservatories attached, made magnificent showings and did a good trade. The commission houses did fairly well, as most of their stock was sold or ordered before the bad weather set in. It was also noticeable that people who in good times spent their money rather freely at Easter were not nearly as liberal in their buying and kicked somewhat at prices.

E. C. R.

Easter Announcements.

The Florists' Exchange acknowledges receipt of attractive Easter offering announcements from E. C. Ludwig, Pittsburgh, Pa.; and J. F. Sullivan, Detroit, Mich., the latter profusely and handsomely illustrated.

WHITE PLAINS, N. Y.—Among the sufferers through a fire here on Thursday, April 16, doing \$60,000 damage, was Herman Bowman, florist.

BEVERLY, N. J.—A falling electric light pole crushed into the greenhouse of John A. Cook, destroying Easter plants valued at \$300.

FRANKLIN, MASS.—The Continental Nurseries have received from Holland a large consignment of hardy rhododendrons, azaleas, roses, Japanese maples, etc.

 A. T. DE LA MARE PTB. & PUB. CO LTD

BOSTON.—The Easter cut flower trade in this city has not been so satisfactory as was hoped for; sales of flowers did not show the activity that had generally been prevalent in former years. In plants it was different; these sold well and most of the growers were well cleaned out.

In cut flowers prices kept up pretty well during the early part of the week, but on Friday and Saturday a drop was noticed all around and many kinds of cut stock were so plentiful on Saturday as to be a regular drug. There was as much, yes, more material handled than in former years, but prices were lower. Richmond and Killarney were the best sellers among roses. There was little demand for American Beauty, though that is generally the case at Easter. Bride and Bridesmaid were both very plentiful and could hardly be moved at any price. The roses that sold at from \$3 to \$6 were most in demand, and there were exceptionally good grades at these figures. The best grades of roses with the exceptions of fancy Richmond and Killarney realized from \$10 to \$12.

Carnations did not move so well as had been hoped for; the prevailing prices were \$1, \$2 and \$3, while some of the more fancy grades brought \$4. White carnations sold poorly.

Violets went well; there was no surplus of these flowers and 75c and \$1 were easily realized for them although the season was so far gone that the quality of the flowers was not as good as might be wished for. Sweet peas, which now play a prominent part in the flower market, sold rather slowly, yet were pretty well cleaned up; they brought from 50c. to \$1. Lily of the valley moved slowly; much of it sold at \$1, while the best grades brought \$2 and \$3. Lilies sold well; they seemed to hang for a time but were fairly well cleaned out by Saturday night. They brought anywhere from \$8 to \$12, according to quality. Bulbous stock was druggish; there were large quantities of narcissi, both white and yellow, which were hard to move. Some of the more fancy narcissi and tulips sold better.

Gardenias went well at \$2 and \$3 a dozen. Orchids were in good demand, bringing \$6 per dozen. Mignonette did not sell, neither did stocks; and many of the other flowers, like Marguerites and antirrhinums, of which there are only limited quantities grown, had very little demand.

J. W. D.

SYRACUSE, N. Y.—The florists generally are satisfied with the Easter trade. It was not a record-breaking; still under all the adverse circumstances it was better than might have been expected. The weather during all the week was very unsettled, and Saturday and Easter day it rained all the time. Prices were very evenly kept down, which increased the sales greatly, still there was a lot of bulbous stock left over. Primulas, roses, lilies and azaleas sold well. There were no novelties. The decoration of the churches was more general and elaborate than in former years.

Quinlan had a very fine showing at his two stores. Burt and Morris had very attractive windows. L. E. Marquise made a fine display at his greenhouses, having a good stock of lilies, and primulas; his Marchioness carnations were very fine.

Prices for pot plants ranged from 15c. for hyacinths upward; lilies at 25c. per bloom sold well, with the supply equal to the demand. Azaleas brought from 50c. for 4-inch plants up to \$5.

In cut flowers, carnations were in great demand; in fact, they were the favorites, and sold at from 75c. to \$1.50; roses realized \$1.50 to \$4. American Beauty, \$4 to \$10 per dozen. Lily of the valley, tulips, daffodils, \$1 per dozen, violets, \$2.50 to \$3 per 100.

H. Y.

CINCINNATI Easter Sunday and trade all over, with a decrease in business of about one-third. Lilies sold poorer than ever before as a rule, and the writer carried over many. Roses and carnations cleaned up, and bulbous stock, such as lily of the valley, tulips, narcissi, Dutch hyacinths, etc., sold out fairly well. Snapdragons, Baby primulas, forget-me-not and wallflowers sold well; prices were only fair. Saturday it rained all day steadily, and only ceased about 6:30 p. m. From that time on the florists in the flower market reaped a harvest; they had a fair business all day in spite of the rain, but the aggregate cannot possibly reach that of former years.
 Mr. Maynard and wife of Detroit were callers on the way home from Asheville. E. G. G.

Prices quoted are by the hundred unless otherwise noted

Table with columns for ROSES (American Beauty, Golden Gate, etc.), CARNATIONS (White, Pink, Red, etc.), and other flower varieties with their respective prices per hundred.

CHICAGO.—The sanguine expectations of the largest growers and wholesalers in this market, that there would be a satisfactory Easter business in spite of the unsettled conditions prevailing in the business world, generally have been entirely fulfilled. The volume of trade was larger than was the case during Easter, 1907, orders being heavier; but this was mainly on account of the large stocks available in every line, and the low prices of the offerings. In point of value the aggregate of returns was considerably less than was the case last year. The weather was extremely favorable to heavy cutting of roses, carnations and the like, being unusually warm for a few days preceding the opening up of the trade, the thermometer on one day reaching the Summer notch of 75 degrees in the shade. This precluded any attempt on the part of the growers to hold back any of their products, and was quite disastrous to the crops of tulips intended for the Easter trade, much of which, particularly painted and potted stock, proved worthless. One drawback, but which affected only local trade, was a dark and rainy Saturday, which condition, however, was late in the afternoon removed by the clouds breaking away and a prospect of a fine Easter Sunday becoming quite glowing. A good deal of what was lost on Saturday materialized on Sunday morning, and buying was kept up until a late hour in such establishments as remained open.

It was apparent to many that the plant business was heavier than during previous years, and the offerings more extensive. Of these roses seemed to be the favorites. Hybrid and Baby Rambler roses were used very generally in all made-up pieces, baskets, hampers, and the like. Azaleas did not seem to be in such abundance as formerly, while rhododendrons and hydrangeas were much more conspicuous. Spiraeas, clematis, daisies, geranias, and primulas were in abundance, some unusually fine stock being noticed. There was no shortage of lilies, but the quality of much of the stock offered was nothing to boast of and such as brought the maximum price quoted for Easter

ter, and prices nearer quotation marks were obtained.
One of the cut flower surprises was a liberal supply of chrysanthemums, in a dwarf yellow variety. While it was not noticed that individual customers bought many, the opportunity to have something out of the ordinary was seized by those who make a point of securing such things. Among other uncommon offerings for the time of year may be mentioned a variety of lilies, amaryllis, jasmine and a few, but very few, pink peonies. There was a little outdoor lilac here and there, but it was not up to much in quality, and did not move well. Easter passed, the market has settled to a reactionary point, and at the opening of the week the demand was quite light, particularly the local call. Prices in many lines have dropped, especially on roses, due to the full crops now in cut at most establishments. American Beauty with long stems go at anywhere from \$2 to \$3, and prices of long-stemmed stock in other varieties have lowered in proportion. On short stock values are hard to quote, being based largely on the size of the order. Carnations are plentiful, and move very slowly, particularly the white varieties, the supply of which is greatly in excess of the colored. Violets drag and appear to be about done. Sweet peas continue to hold up well, both in quality and price. Lily of the valley is in better demand, and lilies are taken pretty freely for Easter social functions. Bulbous stock is a drag, and much is going to waste. There is plenty of everything to be had, and nothing at present on the business horizon to promise higher prices on anything in the immediate future. J. H. P.

KALAMAZOO, MICH.—Although the weather during Easter week may be regarded as having been exceptionally favorable for both grower and retailer, I am afraid the volume of business will not be more than was expected. Prices were, of course, lower than usual as regards cut flowers. The sales of pot plants are said to be satisfactory. Large quantities of cut flowers of all kinds were on hand; shipping trade was lively for several days, and the shippers express satisfaction at the business done although quotations could not be called at all excessive.

Retail trade started in rather later than usual and in my trips through town I did not observe the bustle and activity that I should have liked to see during the two days previous to Easter. Altogether I do not think Easter trade will average up with last year's, although, considering the condition of business, the local trade appears to be pleased it turned out as well as it did. Van Bochove & Brother, as usual, had an extra store and kept extra delivery wagons going most of the week. Their store displays were attractive in appearance and prices reasonable. H. Fisher's window of azaleas showed up well from the street; and the cut flower display of the Central Nursery Company was of good quality and in abundant supply. Fine weather made deliveries easy and brought out the people to view and admire even if their purchases were not as large as could be wished. The bedding plant trade is next in order and is expected to maintain its average; and as the nurserymen have had very fair business so far there is no reason why bedding stocks should not hold their own. S. B.

INDIANAPOLIS.—A composite of the many reports received as to the Easter business shows that the volume was about equal to last year's. Some of the florists indicate a slight deficit, others a slight increase. More sales were made, but they were invariably smaller than anticipated; "ready money" customers were the exception as all the returns were earned with much effort.

Many reports heretofore have indicated that the holiday was too late and the weather too warm for stock to be in good condition. The result proves the reverse, as the weather was ideal and stock in the finest condition. A large portion of the shrubs, azaleas, rhododendrons and lilacs were but half in bloom. Bulbous stock, too, was in prime shape, both indoors and in the field. It is not exaggerating to state that quality and quantity considered the display has never before been excelled. The several flower stores took on a gorgeous attire of color and were filled to the doors.

Buying began later than customary, so that a great deal was available at low prices on Friday. Violets and orchids were the only flowers not equal to the requirements; the former were all gone before Sunday at \$1.50 per hundred, retail. Carnations, particularly the better grades, found a good market at \$5 to \$6 a hundred. The local supply of roses was not sufficient and much shipped stock was necessary. Richmond, Killbuck and American Beauty led in popularity. Prices for these were proportionately better, too. Automobiles for delivery were used with indifferent success by some of the retailers. I. B.

THE BEST WAY to collect an account is to place it with the **National Florists' Board of Trade**

56 Pine St., New York
WHY? Because many debtors will pay the Board fearing otherwise a bad rating in our Credit List. Full information as to methods and rates given on application.

ST. LOUIS.—Easter trade in St. Louis was good all along the line, but not fully up to the expectations of most of the florists. The weather was beautiful, which made delivery easy for the West Enders, who did a great plant trade and had to work all night Saturday. The floral displays at the large churches were noteworthy, especially those in the West End, where enormous numbers of plants were used, lilies predominating. The plant trade was very large, some say larger than in any previous year. In these, lilies again had the call over others; azaleas came next in favor. Spiraeas and Dutch bulbs in pots and pans also sold well; in their make-up, no new features were presented. A great many fine daisy plants were in the market. The bulk of this class of trade was done in the West End, as in the downtown district very few plants were handled on account of buyers going in heavily for cut flowers, of which grand displays were made, and by noon Sunday everything was cleaned up pretty well. Prices as a rule were not so high as in other years. Burke, Foster, Slegel, Riessen, Beneke and Young report an extra good business in cut stock, while Waldbart, Ayers, Newman, Weber, Kalish, Windt, Sanders and others did a rushing business in the plant line, also in cut flowers.

The four wholesalers each got in large shipments of first-class stock, and I should say plenty of it to fill all their orders on hand for outside and local calls. Considering the number of orders stock cleaned up well at prices not as high as last year, when Easter came a few weeks earlier. Long American Beauty, when fancy, sold well at from \$3 to \$6 per dozen; other grades at from \$2 to \$3, and shorts, 50c. to \$1 per dozen; these were in plenty. Other roses, too, were very plentiful; in fact, the market had an oversupply of these, which ran from \$5 to \$10 per 100 in price. Pink

roses were in great abundance, especially Bridesmaid and Killarney. Lilies were also in plenty, with a great many deformed buds on the stalks. A lot of extra fine carnations came in, with top price at \$5 per 100. Colored stock sold much better than white. Enchantress, Nelson Fisher and Mrs. T. W. Lawson were of fine quality.

An enormous supply of bulbous flowers came in, which varied in price a good deal. These did not clean up so well as other stock; prices were a good deal lower than in other years. The best sweet peas sold at \$1 per 100, and some went as low as 35c. Violets were the only scarcity; a few that came in sold out when good. Very little pickled stock was on this market. From the statements of the different florists, business this year gave general satisfaction.

ST. PATRICK.
CLEVELAND, O.—Trade conditions are brightening, or rather have been for some weeks, with the approach of Easter. The shortening up of the carnation crop has given the market a tendency to rise. While there has been a great sale of potted plants, yet the inclement weather Easter Saturday (it rained all day), reduced the plant sales enormously and increased those of cut flowers. Prices were good. In roses, select Richmond, Bridesmaid and Bride brought \$15 per 100; number one stock, \$12; number two, \$8. Carnations realized \$2, \$3 and \$5 per 100; Harrisi lilies \$12.50 and \$15 per 100. Lily of the valley fetched \$4 per 100; violets, \$1; tulips and daffodils, \$3 and \$4, and sweet peas, 75c. to \$1 per 100.

Violets had a phenomenal run; the Cleveland Cut Flower Company sold 50,000. The J. M. Gasser Company and the Smith & Fetters Company had very beautiful window displays. C. M. Wagner says he did a very nice Easter business in spite of the wet day. C. A. Bramley, Superior street, reports the largest Easter trade of any in his experience.

The Sheriff Street Market Company had its annual Easter display, which was more beautiful than ever before. Three prizes were awarded. Richard Gamble took first; S. N. Pentecost, second; Mrs. F. Berger, third. John Moltenkopf showed a fine lot of lilies in pots. Mrs. A. Schmlidt had a nice assortment of potted plants and reports good business. Westman & Getz report an exceptional trade. They said that baskets of flowers and plants did not sell as well as at Christmas, but their sales of potted plants, particularly the pink Rambler, Dorothy Perkins, exceeded the sale of cut flowers. Peter Nichols says his sales were in excess of those of last year. The Ohio Floral Company reports an entire clean up. R. Walters, Edwards street, says business was very gratifying.

NEWPORT, R. I.—Easter trade here, notwithstanding the cry of hard times, turned out fully up to the average. About the usual amount of decorations in the churches was done, and the sending of plants in flower to the shut-ins of the congregations, and the practice of giving small flowering plants to the members of the Sunday schools continue to grow. For the former purpose lilies and pans of bulbous stock were in demand; and for the schools geraniums, begonias and other miscellaneous stock; in fact, almost anything in flower was picked up for this purpose.

There was, as usual, a great demand for lilies; yet there were just about enough on hand to satisfy the call. Some fine plants of these were handled, also some of what we would call poor quality, only fit for use in grouping with other plants. There is not the uniformity in lilies to-day that there was a few years ago when *Harrisii* was in its heyday; now we see *L. candidum* with five-foot stems and *L. longiflorum* giganteum with stems less than thirty inches.

The Gibson Brothers report the best trade they ever had. Their lilies were just in on time, and were all sold, being a fine lot. Violets were handled by them in immense quantities. They had little of anything left over.

F. L. Ziegler, with his two stores, did a rushing trade, and sold an immense amount of stock both in plants and cut flowers. His Bellevue avenue store was an experiment and proved a great success. The formal opening took place on the 9th, and the store was visited by large numbers who were treated to bunches of flowers as souvenirs. This enterprise has been rewarded by liberal patronage.

At Oscar Schultz's everything in bloom was sold out. On Sunday he had the misfortune to lose one of his horses, valued at \$350, by lockjaw.

Henry J. Hass did about the usual amount of business; he had a little bulbous stock left over which, however, came in handy later for funeral work. A. McL.

PORTLAND, ME.—A. W. Dwyer, 663 Congress street, had as an Easter window attraction a hen with her brood of chickens, with an immense egg as a coop, backed by a fine display of seasonable plants and flowers.

THE PAINS WE TAKE IN MAKING THE BURNHAM

This man is smoothing off, with the pneumatic chipper, any rough places on a "Burnham" section. It is only one of the little attentions that go into the making of a Burnham. But it is the little things, after all, that count in making boilers as well as in growing flowers.

Take the question of setting up the boiler, for instance: If the castings are not accurate, and all burrs and casting ridges carefully smoothed off, then when the boiler is set up, it won't go together as accurately and perfectly as the "Burnham" vigilance man demands before he will pass the boiler for shipment, and chalk on his O. K. His O. K. means a perfect boiler for you, one perfect in every way. It is this looking after the little things that make the "Burnham" the big boiler it is—big in every way, but biggest in the coal it saves.

Hot water or steam. Burn hard or soft coal. Send for the new boiler catalog.

WASHINGTON, D. C.—The Easter rush is over and florists are resting from their labors. The continued cool weather was ideal for all inside stock, and quantity and quality of both cut flowers and plants were somewhat extraordinary. There was great similarity on the whole between this and other Easter seasons, with the exception that in spite of the usual rush and rapid selling there was ample stock. The chief demand was for cheap potted plants ranging from 50c. to \$1 each. All greenhouse stock seemed to change hands, while that from the outside such as spiraea, apple blossom, which is very fine this year, sold badly. Lilac, owing to cool nights, was held back and did not get into competition except in limited quantities where the plants were well protected; there is a splendid lot coming on. The demand seeming to increase each year for the cheap pot plant made retailers more cautious, and while, of course, many fine specimen plants could be seen the number was not as large as upon former similar occasions. Saturday morning opened fair and continued so until the early afternoon when high wind with rain interfered, especially with the delivery of plants, many of which were sent in wagons not well adapted to such weather conditions. It was nearly midnight when the stores closed on Saturday. Sunday the sun shone warm and bright, but by 11 a. m., a very high wind came on and the unfinished work of delivery was conducted under difficulties.

Typical March weather prevails, but thus far the prospects for a good yield of fruit seem good.

JAS. L. CAREBERY.

PROVIDENCE, R. I.—An interesting address on the subject of "Dahlias" was delivered to the members of the Rhode Island Horticultural Society April 15 by Alexander McLellan of Newport. Preceding the address, a business meeting was held, at which Marcus M. Burdick was elected to fill a vacancy on the board of trustees and Augustus R. Pierce was appointed on the audit committee. Resolutions on the death of Edward I. Nickerson were passed. It was voted that the president, E. H. Burlingame, appoint a committee to make arrangements for an outing, which will probably be held in June. The committee is composed of Messrs. Bowen, Hope and Burton.

HORTICULTURAL ARCHITECT AND BUILDER

WEST SIDE AVENUE STATION (C. R. R. OF N. J.)
 JERSEY CITY, N. J.

Have not been established 50 years, but long enough to convince the wide-awake Florist and Gardener that it is to his interest to place his work in thoroughly practical hands.

(150,000 sq. ft. glass erected in 1907 will substantiate this claim.)

And why not? My material is the best that can be secured. My iron frame construction has every modern feature that years of practical experience can embody.

And then there is the cost to be considered. Why not let us take up this important question now?

We make a specialty of Greenhouse stock for Commercial Growers of Flowers and Vegetables. Sash bars 32 feet long and over. Write for circulars and prices.

Seed Trade Report

AMERICAN SEED TRADE ASSOCIATION
 George S. Green, Chicago, Ill., president; M. H. Duryea, New York, first vice-president; F. W. Bolgiano, Washington, D. C., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; Leonard H. Vaughan, Chicago, assistant secretary.

KENNETT SQUARE, PA.- A company has been formed here for the manufacture of mushroom spawn, to be known as the Anglo-American Spawn Company, making spawn under entirely different methods from those used by other spawn makers. Several buildings have been erected for this purpose and others are under way. The company states it has discovered a way of "germinating the spores of fully developed, productive specimens, and every brick of spawn is made direct from the spores of selected mushrooms." Test beds from the spawn have, it is said, given entire satisfaction.

PITTSBURG, PA. Thousands of idle men are seeking work on farms and the indications are that the largest crops in the history of the United States will be raised this year. The fact that farm labor is more plentiful than it has been for years has created an unprecedented demand for seeds, especially corn, and seed dealers never were so busy as they are at present. The fact, too, that so many men have been out of employment has caused a rush in the seed markets. Men living in the suburbs who have garden space about their homes are putting in gardens and as a result thousands are busy with the spade, hoe and rake.

THE MANN PURE SEED BILL.- This matter will be dealt with fully by President Green in his annual address before the American Seed Trade Association at Detroit next June. It seems reasonably certain that some federal law will be enacted, and it is necessary, in the interests of the seed trade, that such legislation shall be just and practical. Firms represented at the hearing before the committee on interstate and foreign commerce other than those mentioned in last week's issue, were: Holmes Seed Company, Harrisburg, Pa., and J. M. Lupton, Mattineck, I. I.

It is impossible at this time to say just what further action may be necessary to safeguard the trade against hasty legislation, or to aid in securing wise and helpful regulation, but this subject will receive consideration.

The proceedings at the public hearing will be printed as a public document within a few weeks, and it is hoped to secure a sufficient number of copies to send one to each member of the American Seed Trade Association, and to others who have manifested interest in the matter.

Seed Trade Notes.

As I foreshadowed in my last notes, the past week marked very clearly the "beginning of the end" of the splendid seed selling season of 1908. This does not mean that there is not still business aplenty, but the stampeding rush, which for the past six weeks has kept our seedsmen working to the utmost limits of human endurance, is over, and from now on it remains to clean up the season's orders, and give every possible attention to the very lucrative retail over-the-counter trade that for another month or so will help wonderfully to round out one of the best seed selling years we have for a long time experienced.

As regards the mail trade of the season now ending, there would seem in the as yet absence of absolute figures to be a general opinion among the larger houses that final figures will show a general increase of from five to ten per cent, over the average of the past ten year totals. Counter business has so far been quite a little above the normal, but it will depend largely on the sales of this month (May) to round out a satisfactory retail total. Wholesale orders are now naturally beginning to get small; simply the few odds and ends needed to fill out the last shortages.

I have mentioned that the over-the-counter retail cash trade of the next few weeks will wonderfully help out the season's profits; and there are many reasons for our seedsmen giving every attention to this May business, chief of which may perhaps be mentioned the readiness and willingness, in most cases, of the customers to take whatever is left of the depleted seed stocks. This gives the needed outlet for those yearly surpluses which the longest experience and most careful buying cannot wholly guard against. Every possible painstaking care should be devoted to this retail business of the month of May, as no other branch of our whole seed business can develop larger lucrative possibilities.

Much satisfaction is being expressed by every member of the seed trade, that the consideration of the proposed legislation as regards pure seeds, as embodied in the Mann Pure Seed Bill, will go over until another year. Such a conservative settlement of the matter at this time, until all concerned may have had ample chance and opportunity to express their views on the subject, reflects the greatest credit upon Mr. Mann and all sponsors of the measure. That such a satisfactory present outcome has been reached, the whole seed trade is heartily indebted to those seedsmen who, notwithstanding the inconvenience and money loss entailed by leaving their own businesses at this the busiest time of the whole year, went to Washington the week before last and so clearly placed the importance of the most conservative action in this matter before Mr. Mann and the Foreign and Interstate Commerce Committee. There is no difference of

opinion among seedsmen, that conservative and proper restrictive laws along this line, looking toward the ideal purity of seeds, would result in great and lasting good to the whole seed business. Mr. Mann also fully shares the conservative views of the seed trade, and it is therefore not too much to hope for a most satisfactory settlement of this important subject next year.

The past week has witnessed the opening of the vegetable and plant selling season with seedsmen. Each succeeding year those firms who push these goods are experiencing an increase of orders; and not only is a good profit secured, but of still more importance the selling season for seeds is much lengthened out by these plant offerings, as they greatly tend toward keeping the customers coming until the very end of May, and even well into June.

Our Holland friends are beginning to arrive daily for their annual bulb orders. We cannot much longer put off the important question of what quantities of hyacinths, tulips, narcissus, etc., we can sell another Autumn. But the conservative opinion of the trade would seem to be that about an average Fall bulb season is in sight. V.

CATALOGUES RECEIVED.

HAMMOND'S SLUG SHOT WORKS, Fishkill-on-Hudson, N. Y. — Illustrated Catalogue of Trip Juice, that kills Scale, also one on Slug Shot, that effective remedy for many ills to which plant life is heir, containing as well an interesting story on the development of a School Garden in New York State.

VAN HEININGEN BROTHERS & COMPANY, Boskoop, Holland (New York office, J. C. Van Heiningen, care of Maltus & Ware, 14 Stone street). General Catalogue of Nursery Stock. It is announced that this firm has secured the collection of rare and hardy Rhododendrons, formerly owned by the Kissona Nurseries of Parsons & Sons Company, Flushing, N. Y., which were never placed in commerce. These are now listed for the first time.

THE FOLEY MANUFACTURING COMPANY, CHICAGO. — Catalogue of Materials for all kinds of Greenhouse Construction. Beautifully illustrated with views of houses erected by the Foley firm in all sections of the country—a good guide to the popularity of the concern's materials—also illustrations and descriptions of all appliances necessary in greenhouse building. Attention is directed to the value of Orr & Lockett's Florists' Refrigerators, of which the Foley house is the selling agent.

NEW CANNAS 1908

ROSEA GIGANTEA
This beautiful variety has extra large flowers which are borne in such abundance that the mass of color on each plant is amazing. Single petals are 2 1/2 inches across; color, a deep rich rose, almost a coral carmine. Plants make a vigorous growth, producing unusually fine clumps of green foliage. Height, 4 feet. (A great favorite with visitors to our trial grounds.) Strong plants, \$2.00 each, prepaid; \$18.00 per doz. by express, not prepaid.

each other, thus giving a very attractive appearance to the flowers. Color is crimson, changing to carmine rose with an uneven edge of gold to each petal. Height, 3 1/2 feet. Price, strong plants, \$2.00 each, prepaid; \$18.00 per doz., by express, not prepaid.

GLADIO-FLORA
Remarkable for the unusual shape of the flowers, which look like large Gladiolus. Petals are not long, but short and rounded and so wide they overlap

CANNA METEOR
Meteor is a vigorous grower with healthy green foliage. It is highly valued because of its magnificent flowers, fully four inches across, and abundance of bloom. Color is a deep crimson, very rich; each plant usually throws up five to six trusses of buds which continue blooming luxuriantly all Summer through. Price, plants or dormant roots, 75c. each, postpaid; \$6.00 per doz., by express, not prepaid.

NEW CANNAS OF SPECIAL MERIT

WILLIAM SAUNDERS
(1907) The flowers are large, of splendid form and are borne very freely in immense clusters. The color is a deep rich shining scarlet lightly dappled with crimson. Foliage is a rich bronze.

Height, 3 1/2 to 4 feet. We believe that Wm. Saunders is decidedly the most perfect canna of this type that has been introduced. Those who tried Wm. Saunders in 1907 say it cannot be excelled. We offer plants only; 60c. each, postpaid; \$5.00 per doz., \$35.00 per 100, by express, not prepaid.

60 other Varieties. Send for list and prices

How to Fight the Rose Chafer.

BY H. A. GOSSARD.

The rose chafer beetle issues from the ground in June and within two or three weeks lays its eggs in the earth from one to four inches beneath the surface, usually in waste land, particularly if it be of light sandy character. The grubs, which much resemble the well-known white grubs of soil land, except for their smaller size, feed on the roots of grasses and various plants. They descend below the reach of frost on the approach of Winter and in May ascend nearer to the surface and pupate. Where practicable, badly infested soil may be plowed in late May, thereby destroying many of the pupae by breaking their cells, thus preventing the emergence of the same number of beetles. After the beetles appear, there is no reliable remedy, except fencing them away from valuable plants and hand-picking. Sometimes they will not attack plants sprayed with Bordeaux mixture; again they pay no heed to any kind of spray. While they are killed by strong arsenicals, so many recruits are always ready to take the places of the destroyed beetles that the results of poisonous sprays are almost imperceptible. Specially valuable plants, such as grapevines, small fruit trees, etc., may be enclosed in mosquito netting for two or three weeks during the period of swarming of the beetles, but this method of protection is obviously impracticable on a large scale. Newly set clusters of grapes may be made safe by enclosing them in paper sacks. The most practical device for use on a fair sized scale is an umbrella-shaped collector made of cloth, having a hole in the bottom. Beneath the opening in the umbrella or funnel should be placed a pail containing water with kerosene floating on top. If the beetles above the collector are sharply disturbed by jarring, they quickly loosen their hold and are precipitated into the kerosene. It may be necessary to jar three times per day through a period of ten days or two weeks to get a crop of grapes. With a sufficiently large collector one should be able to jar a rod of heavy grape row in less than five minutes. Some prefer a collector made by tacking cloth strips to long rectangular frames which are laid on the ground beneath the grape rows. When ready for use, the cloth is painted with kerosene or coal tar and jarring is performed by beating or shaking the vines.

HYBRID TEA ROSE KILLARNEY

Hybrid Perpetual, Moss and other Hardy Roses. Strong two-year-old Plants, nearly all in 6-inch pots.

Baby Rambler Roses

A type of Rose which is becoming very popular for bedding purposes. They form shapely, compact, bushy specimens about 18 inches high, producing great profusion from early in the season until severe frost immense trusses of small flowers.

Crimson Baby Rambler (Mme. Norbert Lavasseur). An extra fine lot of strong two-year-old plants, \$2.50 per dozen; \$20.00 per 100.

Pink Baby Rambler (Anchen Muller). Brilliant luminous pink; a shade that is always admired. \$3.00 per dozen; \$25.00 per 100.

White Baby Rambler (Katherina Zelmet). Pure white flowers, showing the yellow stamens very prettily, produced in large candelabra-shaped trusses. \$3.50 per dozen; \$25.00 per 100.

NURSERY DEPARTMENT.

Conducted by Joseph Meehan.

AMERICAN ASSOCIATION OF NURSEYRMEN.

J. W. Hill, Des Moines, Ia., president; C. M. Hobbs, Bridgeport, Ind., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

We do not object to the space writer supplying the syndicate that furnishes a series of daily newspapers, among them the Indianapolis News, notes on horticultural subjects, using Mr. Meehan's material; but it is a mean thing to do so without giving credit either to the original writer of the matter or the paper from which it was culled.

Evergreen Seedlings.

UNITED STATES v. OUWERKERK.

U. S. Circuit Court of Appeals, Second Circuit, April 14, 1908. No. 128 (suit 4136).

EVERGREEN SEEDLINGS—LAURELS—RHODODENDRONS—NURSERY STOCK. Species of the laurel (*Aucuba japonica* and *Kalmia latifolia*) and of the rhododendron (*Rhododendron ponticum*), which retain their verdure throughout the year, are "evergreens" within the meaning of paragraph 252, tariff act of 1897; and under said paragraph seedlings of those plants are dutiable as "evergreen seedlings" rather than as "nursery stock."

APPEAL from the circuit court of the United States for the southern district of New York.

[Decision adverse to the Government.]

For decision below see 153 Federal Reporter, 916 (T. D. 28183), in which the circuit court affirmed a decision by the Board of United States General Appraisers, G. A. 6169 (T. D. 26772), which had sustained protests by P. Ouwerkerk against the assessment of duty by the collector of customs at the port of New York.

The merchandise in dispute consisted of three varieties of plants, designated as *Aucuba japonica* or Japanese laurel, *Rhododendron ponticum*, and *Kalmia latifolia* or American laurel. The Board held these plants to be dutiable under paragraph 252, tariff act of 1897, as "evergreen seedlings." The Government contended that they had been properly classified under the provision in the same paragraph for "nursery stock."

The theory of the Government's contention is that the term "evergreen" is restricted to such evergreen plants as the conifers and box. The Board of General Appraisers held, however—and its decision was affirmed by the circuit court without opinion—that the term is not so restricted, but applies to seedlings of all plants which retain their greenness throughout the year, and that it is sufficient if a plant fall within the general class of evergreens, irrespective of whether it is hardy in a particular locality or under different climatic conditions. The plants in question, being shown to be "evergreen" in this sense, were held to be "evergreen seedlings," as above set forth.

The Two Judas Trees.

In American collections there are two Judas trees, the *Cercis canadensis* and *C. japonica*. In Europe they have a third, *C. siliquastrum*, but the latter does not succeed with us. Of the two that do *C. canadensis* is the larger grower, but *C. japonica* is the handsomer. Both have pink flowers, but those of *C. japonica* are of a much darker pink and altogether is to be preferred to the other. The Japanese one is really a bush, and a slow growing one at that, while *C. canadensis* is a small tree. Both are much planted, the Japanese the oftener, as it fits into so many situations the taller one would not suit. As is well known, the flowering is in the early days of Spring, and the Judas trees are greatly valued then as so few other shrubs, throwing flowers of the same color, bloom at the same time. An interesting feature of the flowering of the Judas bushes is the appearing of the flowers on the hard shoots of the past seasons. It is not alone the shoots of the year passed that have flowers, the limbs of many years past produce them too, and often a few will appear on the trunk itself of old trees or bushes.

In many catalogues these two species are listed under trees. This is proper of *C. canadensis*, but *C. japonica* is never a tree, and should always be enumerated among the shrubs.

Mr. Teas, the nurseryman of Centerville, Ind., has put in circulation a white flowered form of *C. canadensis*, an interesting variety for planting with the others.

Of all the species and varieties nurserymen find the best sales for the Japanese, *C. japonica*; and it is easily raised from seeds.

Watering at Planting.

It is generally believed that with late Spring plantings of trees a watering at the time is beneficial, as it certainly is. But in the writer's opinion there is no time when planted when watering is not a help to the tree. The soil is required to be damp and fitting closely to the roots of a tree when planted, and nothing does this so well as a pail of water emptied in the hole when it is half filled with soil. When water is not used the soil may or may not embrace the roots closely. A careful planter tries his best to get it in its proper place, and now that sand is being used for the filling in immediately about the roots, it is better accomplished than was possible before, but water insures it.

With trees and shrubs that have strong roots it is easily seen whether soil is well compacted or not, but not so with evergreens that carry a ball of fibrous roots. It is not easy to get soil under and around a mass of fibrous roots, such as hemlocks, say, carry. Sand gets there the best, and if helped by pouring water in the hole when half filled, it is almost certain to make a success of the transplanting.

So far as adding moisture to the soil is concerned, this is but secondary to the solidifying of the earth about the roots. Still it does no harm to provide the additional water.

As a rule, the month of May is a hot and dry one,

On elevated sites near the vicinity of water they generally flourish well, the moist air being just to their liking.

Wistarias in Pots.

The great beauty of the wistaria when in flower can be seen by many to seek the nurseryman or florist nearest to hand to obtain a plant of it, and how often they are disappointed, because of there being none in pot, and it being too late to dig one from the ground! A great deal more business could be done were those who deal in plants to remember the advertising of stock which nature does for us. It illustrates the trees and shrubs of all kinds, showing how they grow, the shape they assume and the flowers they bear, better than any writing or photographs could do. These natural advertisements act the same as those in magazines. They quicken into action those who see them and who wish to secure some of the same plants. In many establishments these calls are anticipated and prepared for, a supply of plants being potted ready.

Among vines the wistaria is always in demand. It makes such a magnificent display when vines are strong and large. Many houses have the wistaria covering their fronts to the uppermost window, and such vines usually flower so abundantly that nothing but a sheet of blossoms can be seen.

Photo by Peter Blisset

Kalmia latifolia.

and oftener than not there is a lack of moisture before the planted stock has got good root-hold, making it quite sure to say there will not be more moisture than the roots can take care of.

Planting Kalmias.

This is the season that sees many plantations of kalmias formed. When beds are made for them, being dug to a depth of several feet and then filled in with rough material at the bottom and turfy loam at the top, there is moisture at the roots all the time, and plants usually thrive in them, even when they get but little shade. But the right place for these plants is where the soil is deep and moist and light, and where the sun does not strike them in the heat of the day, such a place, in fact, as they are found in in a wild state.

Imported plants are given the best of care and reach here appearing superior to our own, the foliage being larger and of a brighter green. When these plants are set out here they are often placed in positions not as good as they previously occupied, hence at the end of the season they do not look as well as when they came, and, too, the transplanting has checked them. What to expect of kalmias is not that they will carry along the vivid green of the foliage they were landed with; this our climate will not allow. But to look for them to well represent the best of those found in their wild state is quite possible, given the proper attention, as suggested.

Among the several kinds of wistarias in cultivation none is the equal of the old Chinese, *Wistaria chinensis*, with its purplish-lilac blossoms. There is a white variety of it for those who like it. The Japanese one, *W. multijuga*, has racemes of greater length, but the flowers are farther apart, hence not as striking as those of the Chinese. The American, *W. frutescens*, has much smaller racemes, and blooms a week or two later than the others, and, altogether, is not as useful for the purposes for which the Chinese is employed.

These wistarias have large roots and need large pots to hold them. But if potted a year in advance, as they should be, the roots may be cut back a great deal as well as the tops, to correspond, rendering possible the use of smaller pots.

Much of what is said here applies to all popular vines. There will be calls for them when it is too late to dig them, as there will be, too, for many handsome shrubs; so be prepared by potting a supply now.

JOSEPH MEEHAN.

DALIA ETHEL VICK. Fred. S. Peterson, of James Vick's Sons, Rochester, N. Y., writes to the April, 1908, *Dahlia News* as follows: "The Ethel" is a dahlia originated in Le Roy, N. Y., and was placed on the market the same year as A. D. Lyoni, with which it is synonymous.

Jottings for Florists.

An American Beauty rose with a stem fifteen feet long was an attraction in the window of Robert Kift a short time ago. It came from Eugene Bernheimer, and was grown at North Wales in the large greenhouse belonging to the Florex Gardens, in which Mr. Bernheimer is interested. It is well to know where American Beauty with stems that long may be obtained when needed, but a rose house so constructed that it will insure the stems to set buds when not more than three and a half to four feet long would be more profitable to the grower. That is the way it looks from here!

At Pennock Brothers' store I saw cut growers of *Arctotis grandis*, which is an annual from Southwest Africa. It is the first time I had noticed it used as a cut flower in winter. It belongs to the composite family, from a botanist's viewpoint, consequently it is a daisy-like flower, and to the people in general it is a daisy.

When I grew it a few years ago outdoors in summer, if I recollect correctly, the flowers had a tendency to close toward evening. It is quite distinct from other daisies in so far as the underside of the petals is a lavender shade of coloring, though the upper surface is white all right. The fact that this annual may be forced into bloom for winter goes to prove that there may be many other annuals not yet tried, which might be made use of for that purpose to advantage, by sowing the seeds in August or September.

How did the hardy native *Phlox divaricata* come by the name of "wild Sweet William"? They are somewhat distantly removed from each other botanically. Neither the shape of the flowers nor the color thereof in any way suggests *Dianthus barbatus*.

Sweet Williams so far as I have seen them have not produced lavender-colored flowers, such as this native *phlox* possesses, nor at the same season of the year. The *phlox* is now in bloom here; so also is the yellow hardy *Alyssum saxatile*. Those two associated together in Spring bedding make a harmonious color combination which is very pleasing.

Is there a white form of *P. divaricata* in cultivation? It runs in my mind I had seen it, noticed either in a catalogue or in some journal devoted to horticulture at some time, but I have hunted high and low without the desired effect. A white form would be valuable.

The late Albert Woltemate used to force the old lavender-blue variety for Easter. EDWIN LONSDALE.

(76) **What Constitutes a Bunch of Sweet Peas.**—In advertising twelve bunches of peas for a certain sum, how many stems constitute a bunch?
New York. J. C.

—It is understood in the trade that twelve stems or stalks of sweet peas constitute a bunch, though some growers make their bunches larger.

(77) **Winter-Flowering Sweet Pea Seed.**—Where can I obtain the sweet pea seed for Winter blooming, such as is used by William Sim?
New York. J. C.

—Write Anton C. Zvolanek, Bound Brook, N. J., for seed of sweet peas for Winter forcing.

(78) **Stocks for Winter Bloom.**—When should stocks be planted in order to have Winter blooms in the greenhouse, and what soil do they require?
New York. J. C.

—Sow stocks in August for winter flowering. The best soil obtainable is desirable for stocks, as they are great feeders. Four-fifths loam and one-fifth thoroughly decomposed stable manure will do well for them. When flowering commences a watering once a week with liquid manure is also beneficial.

(79) **A Remedy for Black Snails.**—Kindly let me know what is a good remedy for black snails.
New Jersey. J. S. B.

—The questioner does not mention the kind of plants upon which the snails are feeding, but, taking it for granted that it is ordinary greenhouse stock, we would recommend the following method to get rid of the snails: Toward evening water with lime water, and then immediately dust over the surface of the soil with dry lime; in five or six days afterward dust over the soil with common salt.

(80) **Sun Scald of Geraniums.**—I send you sample of several leaves of geranium plants, and would like to know what makes them turn the way they do and what I can do to remedy same.
New Jersey. R. G.

—The leaves have no disease so far as we can discover. The spots on them have evidently been caused by sun scald, brought about by watering the plants overhead during full sunshine, or, in other words, allowing water to settle

on the leaves at a time when the roots were quite dry. Pick off the affected leaves and keep the foliage dry; the plants will soon be furnished again.

(81) **Diseased Geraniums**.—I send you two diseased geranium plants. Kindly explain the cause, nature and remedy for same. The colored-leaved plants I bought last Fall. They looked healthy then, but now all have gone to the bad. C. H. P.

Pennsylvania.
—F. W. Timme in the issue of The Florists' Exchange for April 25, page 591, gave some interesting notes about disease on geraniums, to which we would refer the inquirer in the present case. The leaves sent for examination had wilted perceptibly in transit, so it was difficult to determine the diseased part of the leaf from that which had begun to show signs of natural decay.

(82) **Plants to Produce Winter Flowers**.—What plants would you recommend to grow for Winter-flowering for cut blooms? I have one house partly full of Bridesmaid and Bride roses. I have one spare bench in this house, one spare bench in my carnation house, also some room in a house I run at 50 degrees night temperature. The carnation house I run at 54 degrees, and the rose house at 60 degrees night temperature. Mass. O. N. E.

—As we do not believe it profitable to grow mixed crops in one house, we would fill the spare bench in the rose house with some other variety of rose—Richmond or Killarney, preferably. We would also fill up the carnation house with other carnations, and for the space vacant in the house where the temperature at night is 50 degrees, we would plant for Winter-flowering either snapdragon or sweet peas.

(83) **Treatment of Nephrolepis Todeaoides and Whitmani**.—Kindly give treatment of Nephrolepis todeaoides and Whitmani ferns. Will they do suspended from the roof, two feet from the glass, in a lean-to house heated by hot water? Also give treatment as to potting soil and the heat required. I am not doing them as well as I wish. Penn. T. M.

—To grow the ferns mentioned we would not advise suspending them from the rafters of a lean-to house. The ventilation in such a house would not be conducive to making perfect specimens. Pot the plants in a good, rich soil; one, though, in which the manure used is thoroughly decomposed; a soil such as is given roses, with sand enough added to make it drain a little quicker. Run a night temperature of 56 degrees; give air at 65 degrees in the daytime, and keep the atmosphere of the house moist, as a rule.

(84) **Temperature for Carnations—Stevia**.—I would like to know the night and day temperature for the following carnations: Enchantress, Rose Pink Enchantress, White Perfection, Winsor, Robert Craig, Afterglow, Beacon and Lady Bountiful. I also have a small house I would like to devote to stevia. Could I plant my stevia out of 2 1/2-inch pots into the house and grow them on with success? How far apart should I plant them? New Jersey. A SUBSCRIBER.

Run the night temperature at 50 or 52 degrees for the carnations, allowing a 10 or 12 degree raise in the daytime, according to the state of the weather.

We would not devote any house entirely to stevia, as the plants can be grown outdoors through the Summer, placed in the house just before frost, and the crop of flowers marketed before January 1, if necessary.

(85) **Ficus pandurata**.—What is the native country of Ficus pandurata? When was the plant first introduced and by whom? Illinois. T. J. C.

—Through the kindness of Robert Craig of Philadelphia, Pa., we are enabled to give the following particulars regarding the introduction of Ficus pandurata to commerce: This plant was sent to the Botanical Gardens of Brussels, Belgium, from the French Congo region of Africa about ten years ago by one of the collectors for that institution. Mr. Sander, the head of the firm of Sander & Sons, St. Albans, England, saw the plant at Brussels, and procuring some stock, introduced it to commerce about the year 1900. The plant did not create any very favorable impression, however, and a year later, when Robert Craig saw it, and realizing that here was a good thing but unappreciated as yet, he purchased the bulk of the stock and brought it to this country. Up to this period the propagation of this ficus had been done from eye cuttings only, and really first-class specimens were unknown. Mr. Craig adopted the method of mossing and rooting strong leads, which naturally resulted in making magnificent specimen plants, furnished from the top clear down to the pot, and thus was this splendid plant introduced to the American trade; and, of course, its success was assured, as there is no decorative plant more noble in its appearance, more tropical in its effect than Ficus pandurata.

The sales of this plant throughout the United States have been enormous. Only last season one large firm of wholesale dealers and growers bought several thousand dollars' worth in one order. Mr. Harrison, an English gentleman, who represents one of the largest, if not the largest, greenhouse establishments in England, was here last Fall and purchased a stock for re-impotation to England, and, having completed his purchase, remarked that Ficus pandurata was one of the good things the European growers had overlooked, and that the plant had never been so well done over there as it has been in Philadelphia.

Speaking about the general character of the plant, Mr. Craig says: "When thoroughly established and root-bound it will stand any amount of hardship, which makes it a most desirable subject for the decorator. Recently shifted or repotted plants will under adverse circumstances sometimes lose some of their leaves, but, of course, all plantmen will easily understand this and will, when repotting this ficus, see that proper conditions for establishing the newly potted plants are provided. Experience has proved that a night temperature of 60 degrees is just right for growing, but when established and kept rather on the dry side, it will stand a temperature of 10 degrees lower without injurious effects."

500,000 PANSIES BEST MARKET STRAIN GROWN

Grown from seed of our own raising, this strain is the result of over 25 years' careful selection and for size, form and substance and wide range of color in clear, brilliant selfs and novel shades and markings, they will be found unsurpassed. The colors are very evenly assorted and the growth is very strong and stocky.

Fall transplanted plants ready to bud and bloom. Prices \$10.00 per 1000. Larger Sizes \$15.00 and \$20 per 1000. EXPRESS ONLY CASH WITH ORDER

I. E. COBURN, - 291 Ferry Street, - EVERETT, MASS.

THE NATIONAL FLOWER SHOW, under the auspices
of the S. A. F. O. H., will be held at Chicago, Novem-
ber 6 to 15, 1908. William F. Kasting, Buffalo, N. Y.,
is chairman of the show committee.

Sulzer's Tribute to Wm. R. Smith.

Hon. William Sulzer of New York, in a speech deliv-
ered in the House of Representatives on March 25,
1908, in which the honorable gentleman protested against
the removal of the famous historic trees in the Botanic
Garden at Washington, D. C., to provide a site for a
statue to General Grant, paid the following tribute to the
worth and work of William R. Smith, superintendent
of the garden, which, we feel sure, will be read with
interest and appreciation by the many friends of the
"Father of the S. A. F. O. H. charter" throughout
the country:

"I am a friend of William R. Smith, the Director of
the Botanic Garden, a truly great man, a man who has
done a great work for all the people, a world-wide work
for this country; a man who has done more in two gen-
erations than any other man in all this land to foster
and incite the love of the beautiful, the love of art,
the love of trees and shrubs and plants and flowers; a
man who has studied the soil, who has made its soil
wastes blossom like a rose, who has cultivated and
propagated in the Botanic Garden all kinds of plant life
and distributed them to all parts of the country, to grow
and blossom and thrive; a man who has made two blades
of grass grow where one grew before; a great botanist,
a great scientist, a great worker, a thinker, a philoso-
pher, a great horticulturist, a great landscape gardener,
a lover of the beautiful in nature, a man who long ago,
before Fairbank or any other man in this country, experi-
mented with the possibilities of our soil in different parts
of the country in order to find out to what it was best
adapted and what it would best produce, and, finding it
out, worked wonders in every section of this country.
I am a friend of this great Scotchman, and I say and
I think we should give heed to his words, and to this
description of the Botanic Garden that he loves so much,
that has been in his charge for so many years and
through the agency of which he has done so much to
beautify the city and render such a valuable service to
every part of the country. We should listen to his pro-
phet and save the trees. They can never be transplanted.
They can never grow again. Cut them down now and
they are gone forever, with all their wealth of beau-
tiful and precious memory."

"William R. Smith loves the grand old trees. Let
us save them. Let us give heed to his protest and stop
the destruction of the Botanic Garden, which it is too late
to take any remedial action to prevent the destruction
of its trees and finding a more suitable place, and a more
appropriate site for the Grant Memorial."

BOOKS RECEIVED.

WINDOW GARDENING. By Herman F. Dornier. Pub-
lishers, The Bobbs-Merrill Company, Indianapolis,
Ind.

The author of this very serviceable little volume
is a son of the well-known florist, Fred Dornier,
Lafayette, Ind., and is well qualified to write on the
subject with which the book before us deals. He
says in his preface: "It has been the aim of the
writer to give such cultural directions as will enable
the inexperienced to overcome most of the difficul-
ties which arise in the growing of plants in the
window garden. An extended experience in the
handling of house plants has led to a recognition of
the causes underlying these difficulties, and an ef-
fort has been made to suggest methods of treatment
which will enable the grower to care for his plants
intelligently and insure a fair measure of success."
That the author has carried out his aim faithfully
and well the subject matter presented fully demon-
strates. The instructions provided are simple,
 terse, practical and to the point—just such as the
window gardener will welcome, and profit by a
perusal of them. There are chapters devoted to the
selection of plants, containers or receptacles in
which to grow them, potting, soils, watering, fer-
tilizers, light, heat and ventilation, insect enemies,
propagation by seed and by cuttings, bulbs, foliage
and flowering plants, etc. The retail store man will
find the book very useful to himself, and one that
he can safely recommend to his customers. The
volume is neatly gotten up and is profusely illus-
trated.

YARD AND GARDEN. By Tarkington Baker. Publish-
ers, The Bobbs-Merrill Company, Indianapolis, Ind.

In recent years the taste for outdoor gardening in
the United States has developed to a gratifying extent,
and it is only natural that there should appear from
time to time, looking toward its further encouragement,
books and other treatises dealing with the subject. The
volume before us is one of these. It is a "book of prac-
tical information for the amateur gardener in city, town,
or suburb"; and it is one of the best that it has been
our pleasure to peruse. Not that Mr. Baker has pre-
sented anything new, but he has given us something that
is just a little better than any others of its class. This
arises from his interesting treatment of the subjects
dealt with, the very practical nature of the instruction
he imparts, and the comprehensive and thorough manner
in which he goes into the details of the work necessary
to success in the undertakings upon which he writes.
Among the matters discussed in the volume are: The
yard, planning the garden, how to plan, lawns, vines,
annuals, hardy perennials, some popular perennials,
bulbs and tuberous rooted plants, some popular hardy
bulbs, irises and tender bulbs, shrubs, trees, soil and
fertilizers, insects and diseases. There is a so a chapter
on the indoor winter window garden, and one on "spe-
cialties," such as roses, hardy ferns, peonies, plox. In
an appendix is furnished a list intended to suggest what
hardy bulbs to plant in order to insure a succession of
flowers of this class outdoors practically all the year
round, giving the popular and botanical names, height,
color, and brief cultural directions; also lists of the best
annuals for all purposes. The book is well printed, and
is embellished with numerous illustrations, several sug-
gestive designs for city yards, together with planting
schemes, adding to its usefulness.

S. A. F. O. H. Plant Registration.

It is a pleasure to note the improvement evidenced by
the plan adopted by the present Secretary of the S. A. F.
O. H., Willis N. Rudd, in the matter of registration by
the national society. Mr. Rudd makes it specifically
known that the registration entry is merely provisional,
and calls for objections to the names and descriptions
published within a certain time, if no objections are
forthcoming, the registration becomes definite.

This is a step in the right direction. It might be
made more effective, we think, were the proposed names
and descriptions first submitted to the society's nomen-
clature committee, together with specimens when ob-
tainable, to be passed upon by that committee before
publication, provisional or otherwise, is made; for it has
been our experience that the reading public seldom or
never take the necessary heed of articles of the kind re-
ferred to appearing in print, to the extent of challeng-
ing them when such calling in question is imperative,
thus, too, within a given period, or before it is too late
to be of the service desired by the secretary.

To place the matter previous to publication before
the nomenclature committee of the S. A. F. O. H., would
be an evidence that the national body had done its part
in the premises, and supplemental information, if any,
secured from the reading public would either be an en-
dorsement or a correction of that endeavor. The society
should not, we think, rely altogether on the trade in the
matter of keeping its registration records straight;
rather should this duty rest mainly with its nomen-
clature committee, whose decisions should be placed before
the public for corroboration or emendation.

The American Rose Society.

It is said that the Chicago show held in March brought
out the largest single assortment of cut rose specimens
ever exhibited in America. The only pity was that so
beautiful a display had not a larger public patronage.

The settling of all the prizes is now a matter of in-
terest. The total number of prizes awarded is 64, of
which 51 are in cash and 10 are cups, medals, books and
bons.

The trade papers did much for the show by publish-
ing excellent illustrations which gave an idea to those
who could not come of what there was at the Art In-
stitute.

The American Rose Society has sent letters of thanks
to the Chicago Florists' Club and the president of the
Art Museum for the cordial and courteous attention
given to the society.

Five new life members joined the society, which brings
the permanent fund invested up to \$3,000. What the
society now needs is that every flower grower and land-
scape gardener in America shall join us. We need the
help. The membership slightly exceeds that of 1907.
The "Rose Journal" is to be started, but we want more
support to be pledged to make it a success. Come and
give assistance, you men and women who grow roses.

There is to be a June rose show in the Bronx Park
Botanical Garden, New York, and all growers of roses
who can are invited to exhibit. Medals will be awarded.

The certificates of life membership will shortly be for-
warded to all new members.

"A Rose for every Home; a Bush for every Garden."
BENJAMIN HAMMOND,
Fishkill-on-Hudson, N. Y. Secretary.

Society of American Florists and Ornamental Horticulturists.

Notice of Registration of Canna.

The Frank Cummings Bulb & Plant Company, of
Morridian, Miss., apply for registration of a canna as
follows:

CANNA, W. E. GORRELL, seedling of L. Patry, origi-
nated with us. Flower large dark salmon pink slightly
flecked with red, petals large, rounding, slightly recurved;
large branching flower heads, very broad leaves, slightly
edged with bronze, thick and leathery; growth very
vigorous; height 4 feet.

Public notice is hereby given of this application for
registration and any persons objecting to the same or
knowing of any reasons why the registration should not
be made as above, are requested to forward a statement
of their objections to the undersigned at once.

No objection being received within twenty days from
this date, the registry will be completed.

April 27, 1908.

Notice of Withdrawal of Registry.

Learning that the name Mayouneen had previously
been applied to a rose, Alexander Montgomery of Natick,
Mass., withdraws the name Mayouneen and desires that
the name White Killarney shall stand as previously
registered.

Registration of Sweet Peas.

The names of the following winter-flowering sweet
peas are submitted for registration by Ant. C. Zvolanek,
Round Brook, New Jersey.

Any persons objecting to these registrations, or know-
ing of any reasons why they should not be made, are
requested to communicate with the undersigned at once.
Failing to receive any such communications within
twenty days from this date, the registrations will be
completed.

GREENBROOK, seedling from Mrs. Geo. Lewis × un-
named seedling, height over 6 feet, flower white, stand-
ard and slightly blue, very large orchid-flowering, up to four
flowers to a stem; stems average 18 inches.

BLUE BIRD, seedling from Walter Wright × Wallace;
height over 6 feet; flowers blue, bearing up to four flow-
ers on 20-inch stems, standard wavy.

GOVERNOR JOHN FRANKLIN FORD, seedling of Mrs.
Wm. Sim × Spencer seedling; height over 6 feet, foli-
age narrow, flower pink, when fully open changing to
salmon pink, standard wavy, producing up to four flow-
ers on 20-inch stems.

W. N. RUDN,
May 1, 1908. Secretary.

Our Philadelphia Correspondent.

Edwin Lonsdale has accepted the office of correspon-
dent for the "Florists' Exchange" in this locality. P. M.
Read will look after the business end.

The foregoing item appears under the heading of
"Philadelphia Notes," in a New England contemporary.
We are obliged for the courtesy, but the information
given is hardly correct. Mr. Lonsdale has *not* accepted
the office of Philadelphia correspondent for The Florists'
Exchange, but has very kindly consented to contribute
special articles to our columns, on the lines now appear-
ing therein, and otherwise. Mr. Read, whose address is
905 Lippincott Building, Philadelphia, will look after
the local news and advertising business in our behalf.

OUR READERS' VIEWS

Proposed Co-Operative Flower Growers' Association.

A meeting of the proposed Co-Operative Flower Growers' Association was held in the Fruit Auction Company's Building, corner of Franklin and Washington streets, New York City, on April 25, which was well attended by rose, violet, carnation and other growers, representing over one million feet of glass devoted to cut flower growing, all shippers to the New York market.

This association is being formed with the object in view of operating a salesroom in New York City, similar to those conducted by commission men, but on a much larger scale; to employ a competent manager, salesman, bookkeeper, and other necessary help, under the direction of a board of directors elected by its members. The details of incorporation have not been settled, nor the amount of capitalization decided upon; but these matters are in the hands of a committee who will report at the next meeting.

A committee of three, consisting of C. E. Bertanzel, Roslyn, L. I., John Weston, Valley Stream, L. I., and Ernest Lawyer, have been appointed to secure a manager to take charge of the selling of the cut flowers grown by the association's members. C. E. Bertanzel is secretary of the committee to whom application should be made.

It is not the mission of the association to try to fix any arbitrary price on its goods, but by concentration and organized effort to reduce the cost of selling; and in all probability add a supply department, whereby it can reduce the cost of producing. Composed as this company will be of regular shippers and having a salesroom second to none in the city, with efficient management and fair dealing, it will endeavor to prove to the buyer that it will be to his advantage to deal direct with the producer.

Concerns similar to this are successfully operated in other lines of business, perishable goods included; and it is claimed that the ability of many of limited capital to combine under efficient management and without incurring liability beyond the amount of their stock subscription has been one of the chief sources of the tremendous industrial growth of this country. No stronger argument is needed to demonstrate the superior money getting capabilities of the corporate form of business than the fact that it is universally used by successful business men; and the cut flower growers seem to be waking up and falling in line with the march of progress.

The next meeting of this association will be held in the same place on Saturday, May 9, at 2 p. m., when all cut flower growers for the New York market are invited to attend; no others will be admitted.

ONE WHO WAS AT THE MEETING.

A Blue-Flowered Calycanthus?

Editor Florists' Exchange.

In the Florists' Review, Chicago, of April 15, under the heading of Nursery Notes, we are told "Calycanthus floridus is a species forming a small, compact bush four to six feet high, with deep blue flowers which appear early in the Spring and last well into the Summer."

No doubt many, like ourselves, wish this was true, as a blue-flowered calycanthus would become perhaps the most popular shrub ever known, especially if the flowers appeared early in Spring and lasted well into the Summer.

Calycanthus floridus has brownish purple flowers; so have all the calycanthuses, except the one from the Pacific Coast, C. occidentalis, which produces brick red flowers.

Just what the Review may mean is hard to say, as we cannot think of any shrub with deep blue flowers which appear early in the Spring and last well into the Summer. Indeed, a shrub with deep blue flowers is almost unknown in collections. Calycopsis maritimus has blue flowers, which appear in September or October.

NURSERYMEN.

Tin Cans as Drainage.

Editor Florists' Exchange:

I bought five plants of Lupinus Moenchii for a lady's veranda box at Easter. The plants were in 7 inch pots which I plunged, but could not get them low enough without emptying the box. At the bottom of the box there were 33 tin cans, the box being about 3 feet 4 inches in length and 10 inches wide. Fancy 33 tin cans in so small a box, for drainage! Surely he must have been a "tin can" florist that put them there.

G. M. N.

Self-Boiled Lime-Sulphur Mixture as a Promising Insecticide.

This subject is dealt with in the "Farmer's Bulletin" of the Bureau of Plant Industry, United States Department of Agriculture, by W. M. Stern, pathologist in charge of orchard spraying demonstration investigations and diseases of fruits. The bulletin says, among other things:

At intervals during the past several years the writer has made experiments with sulphur and various sulphur compounds with the object of finding a remedy that could be used during the growing period on fruit trees, especially the peach, without injury to the foliage or fruit. The first work was done in 1901, at the suggestion of M. B. Waite, and consisted of experiments with various sulphides, all of which proved injurious to peach foliage. During the season of 1907 self-boiled lime sulphur mixtures in various proportions and strengths were tested on both the apple and the peach.

Preparation of the Mixture.

The mixture that gave the most promising results was composed of 10 pounds of sulphur (flowers of sulfur) and 45 pounds of fresh stone lime to 50 gallons of water, and may be prepared as follows:

Place the lime in a 50 gallon barrel and pour a 2 or 3 gallon bucket of boiling water over it. Immediately add the sulphur and another bucket of hot water. The heat from the slaking lime will boil the mixture violently for several minutes. Some stirring is necessary to prevent burning, and more water should be added if the mass gets too thick to stir, but the cooking is more effective when the minimum quantity of water is used, usually from 4 to 8 gallons being required. A piece of old carpet or gunnysack thrown over the top of the barrel helps to keep in the heat. The boiling will continue from twenty to thirty minutes, depending upon the quality of the lime. When the boiling ceases, dilute with cold water to make 50 gallons, stir thoroughly and strain through a sieve of about 20 meshes to the inch in order to take out coarse particles of lime, but all the sulphur should be carefully worked through.

In a similar manner, enough for 150 gallons may be prepared in a barrel by using 30 pounds of sulphur and 45 pounds of quicklime, with about 20 gallons of boiling water. When the boiling ceases, the barrel should be filled with cold water and diluted with 100 gallons more when transferred to the spray tank.

In some of the experiments a wash consisting of 5 pounds of sulphur and 10 pounds of lime to 50 gallons of water gave excellent results. This would indicate that a much more dilute mixture than the 10-15-50 formula may prove to be a satisfactory fungicide. The wash was also prepared with cold water instead of boiling water, and in some cases a portion of the lime was at first withheld and later added, a small lump at a time, in order to prolong the boiling; but the experiments have not yet been sufficient to determine definitely the correct formula and the best method of preparation.

Should the boiling be very prolonged the mixture might become caustic enough to burn foliage, although no such injury developed in the experiments. It should be found in practice that the use of hot water dissolves too much sulphur, so that the foliage is injured. Cold water may be substituted and a less intense heat thus developed, or the sulphur can be withheld until the lime has partly slaked, thus regulating the amount of sulphur dissolved.

By this boiling process the sulphur is put in good mechanical condition for spraying and enough of it is dissolved to make the mixture adhesive. As a large percentage of the sulphur is simply held in mechanical mixture with the lime water, it is necessary that the spraying outfit be provided with a good agitator, so that the mixture may be kept constantly stirred, and settling be thus avoided. In the treatment of apple trees, Paris green may be added for the control of the codling moth in the same manner as when Bordeaux mixture is used.

A Combined Fungicide and Insecticide.

Self-boiled lime-sulphur washes used in the dormant spraying of fruit trees are known to have some effect against the San Jose scale, and in order to avoid the expense of a cooking plant a few growers have employed this method of preparing the wash. Entomologists have wisely discouraged the use of self-boiled washes because of their inherent, but the boiled preparations, but when used as a fungicide in the growing season a self-boiled lime-sulphur wash might be expected to aid considerably in the control of the San Jose scale and other scale insects by the destruction of the crawling lice, and would thus perhaps prevent the infestation of the fruit, a condition especially likely to occur with apples and peaches. This would give it a decided advantage over Bordeaux mixture and make it especially useful as a combined fungicide and insecticide in the treatment of large apple trees on which the scale is so difficult to control. Summer applications for the prevention of fungous diseases would thus supplement the dormant treatment of the San Jose scale without extra cost.

Sulphur is also a well-known remedy for various mites, and the self-boiled wash would probably be of considerable value in the control of the red spider.

The truth of the old saw, "It's an ill wind that blows nobody any good" is being experienced this year in the neighborhood of Pottsville, Pa. According to the daily newspapers, the country is in a bad way, owing to the depressed condition of business prevailing throughout the country, have stopped farming and garden pursuits. As a consequence, there has been quite an augmented employment of garden purposes in that vicinity, and the fact that most of the things usual, owing to the present trade conditions, available for farmers, augurs well for the coming year's products of the field.

A Practical Use for Postal Savings Bank Deposits.

Mr. J. C. Talisman, of the Philadelphia Record, writes: "The Philadelphia Record has published a series of articles on the subject of the Postal Savings Bank, and the investment of the deposits made therein. It is a grand idea of home-ownership on the land and sea, and the tide of population from the congested cities to the country towns and villages and rural settlements. The idea that must be fought for at the present time is that every man out of work in this country today would find employment, and the restoration of prosperity be permanently assured, if a postal savings bank were established by Congress in this session, provided the deposits therein were directly invested by the Government in forest plantations and the re-planting of arid land, and swampy and overflowed lands. These lands should be reclaimed just as fast as closely settled rural communities of very small farms can be established on them. Training in intensive farming and gardening must go hand in hand with rural settlement. The people must be taught both handicraft and homecraft."

The Talisman says further that already the country towns are feeling the evil effects of the diversion of their natural trade to the big cities through the mail order channels and now the proposition to establish a parcels post threatens to divert an enormous additional volume of trade from rural trade centers to a few big cities by making Uncle Sam the delivery agent of the mail order houses. Instead of this regarding the growth of country towns, the national Government should encourage it. One way to do so is to create forest plantations near every small city and country town. In connection with such forest plantations, national educational institutions should be established for training in handicraft, especially woodworking and gardening, as well as tree culture. The interest on postal savings bank deposits should be two per cent. per annum. The investments in forest plantations and land reclamation would return four per cent. The surplus would provide a fund to maintain these forest and garden schools. "To bring all this to pass," says the Talisman, "it is only necessary for Congress to pass the Postal Savings Bank bill after amending it so as to authorize the investment of the deposits as above advocated. It is a grand object to work for." The Talisman is hopeful that this can be brought about, and urges that all concerned should go to work to convert the Senators and Congressmen and get all of their friends and neighbors to help push the whole propaganda for rural settlement and the upbuilding of the country towns and villages.

As showing its faith in the proposition, the periodical in question publishes in its April, 1908, issue a suggestive article on the subject of "Training in Handicraft and Homecraft," by Philip Emerson, principal of the Cobbet School, Lynn, Mass., wherein that gentleman outlines in a very interesting way the factors that have made for the success of garden training in the school over which he presides.

THE CANADIAN HORTICULTURAL ASSOCIATION has accepted the invitation extended by the Buffalo Florists' Club to all delegates attending the C. H. A. convention at Niagara Falls next August to take part along with the S. A. F. O. H. delegates, in the trip to Buffalo, in the sports and entertainments which will be given at that time.

COLORFUL SUPPERS. Colored theater suppers are the latest amusement in London society, says the Gardening World. Since harmless vegetable colorings have been discovered the chef is able to serve a "daffodil," "rose," or "lilac" supper in shades to imitate the flowers. Tablecloths and serviettes are made in various colors to match. The "daffodil" supper, for instance, is carried out in shades of yellow. The table is spread with a yellow cloth and decorated with daffodils.

Jacob Rhule.

Jacob Rhule, aged 69, was a German, and for many years a subscriber to the North Star, died, April 17, at the home of his son-in-law, C. A. Keck, 110 Fourth Street, Asper, Pa. Mr. Rhule conducted a flower and market garden in the North Star for many years and every December he sent roses and flowers to the Grand Army posts, to be used in decorating the graves of the dead soldiers. He was married during the entire year in a Pennsylvania cemetery. He was a member of Pas. 41, G. A. R. and Exalted Order, No. 26, V. O. F. W. He leaves two daughters, three sons and a number of grand children.

Sweet Peas Under Glass.

BY WILLIAM SIM.

Continued from Page 58.)

Sweet Pea Society.

What we need here now is an American Sweet Pea Society, for at the present time there is nothing to prevent any one from selling sweet peas under any name he pleases. We have Earliest of All, Christmas Pink and Xmas Pink. These three varieties are the same in every particular. The selected Earliest of All is earlier than the others, but the flowers of all three are identical. There are Mont Blanc and Florence Denzer; these two are identical. There are also Zvolanek's Watchung, Burpee's Earliest White and White Bird; these are all identical. We have Flamingo and Christmas Red; these are identical, and Sunbeams and Canary Bird are identical. Aside from keeping the names straight a society would stimulate the growing of sweet peas, and no doubt many would go into improving them in the way the carnation men have done with the carnation. If a number of those interested would get together with this end in view it would be hard to predict what the sweet pea would be ten years from now. Just fancy what an exhibition you could have if a number of growers got together and did as the carnation men have done! The sweet pea is everybody's flower, being within the reach of all. Thus far Mr. Zvolanek seems to be about the only one to improve this class. Only a few years ago the first of this type were seen; now he has practically all the colors seen in the late varieties. I think great credit is due him for what he has accomplished. Putting aside Christmas Pink, Mont Blanc and Sunbeams, he has raised practically all the other varieties in cultivation now. He is doing for this type of peas what Henry Eckford did for the late flowering section.

Cultivation.

To grow the sweet pea to perfection under glass you must have a greenhouse suitable for the purpose. It should be at least eight feet high on the sides, four and a half feet being glass. My houses are seven feet, and I find the side rows strike the glass when the vines are about half grown, thereby giving me half a crop. My center rows are about right; they are twelve to fifteen feet high. The higher the vines grow the more and better flowers you get. We plant the rows five feet apart and in a line with the supports of the greenhouse. The uprights are twelve feet apart, so in supporting we run twine from one support to the other on each side of the row. This I have found the best method of supporting. I have tried wire netting; it is only a nuisance, as the vines do not cling to the wire, which causes just as much tying as if it were not there. It also causes injury many times to the vines, as a sweet pea stretches many times more than a foot in developing; if held back by anything in growing the growth looks like a spiral spring, and the picking of the blooms is made very difficult. The side rows are planted five feet from the sides of the house; and all the heating pipes are on the sides. The vines are very susceptible to red spider, and as they will not stand syringing, the further you can afford economically to have them from the pipes the better.

We have not changed the soil in the houses since they were built four and five years ago, and we find the vines are getting more vigorous each year. In the same soil a crop of tomatoes and of violets is harvested each year. The soil was originally eighteen inches deep, but by the application of manure each year the depth is now two and a half feet. The tomato crop is on the wane the middle of August. When these are cleaned out we trench the house over as deep as the soil, bringing the bottom soil to the surface. In the bottom of the trench we put three inches of decomposed cow manure; one foot from the surface we put on three inches more of the same material. The house is allowed to remain in this state until nearly time for sowing the seed. The soil is then usually very dry, so we dampen it down enough to cling together while the house gets another forking over. This time we go down one foot and mix the top layer of manure with the surface soil. We then make the surface as nearly level as possible and thoroughly water the soil, giving enough to penetrate the entire mass with a strong dose of liquid horse manure. In about three days, depending on the weather, the house will be ready to plant. We sow the seeds about one and a half inches apart. We make the drills one inch deep and do not

Jubaea Spectabilis at Los Angeles, Cal.

allow more than one inch of soil over them. We do not pull any more soil toward the roots as is often recommended, but let it remain level. If more soil is pulled around the base of the plant stem rot is sure to follow. We do not water the plants again until they are up about three inches.

Of course, you can grow them on a bench with a few inches of soil, but the results will be just what you make them—a weak growth and a crop of short-stemmed flowers. These soon play out, as there is not enough soil or food for the vines to live on.

They may be made to flower any time you wish by increasing the temperature, but the best results are obtained by growing at a temperature just above freezing until the buds can be felt in the crowns of the plants. Then the temperature should be gradually increased, say one degree a night, until you reach 48 degrees. This, I think, is about right, although in Midwinter I think they move a little better at 50. As the days lengthen a little cooler temperature seems to suit better. A rise of 10 to 15 degrees should be given during the day in sunny weather. In spells of cloudy weather 55 degrees

A Cinnamon Tree at Los Angeles, Cal.

is high enough during the day. If a high temperature is given in dark weather the growth gets soft and wilts when the sun comes out bright again. While the plants are young they should be regularly fumigated so that there will not be a sign of lice when the plants com-

mence to flower. If they are clean at this stage it will not be necessary to fumigate while they are in bloom. It is impossible to sell sweet peas that smell of tobacco. Tobacco also bleaches the flowers of some varieties, and makes them look like some other variety.

We sometimes hear of someone having trouble with the buds dropping. This is more the case in Midwinter than at any other time, and is caused by a too cool temperature or a sudden chill, or too much water. Should a house be allowed to go near the freezing point in Midwinter the wholesale dropping of buds will be sure to follow.

Diseases have not shown themselves with us. Sometimes we see a plant that looks stunted, with yellow streaks in the foliage; this we have attributed to too rich soil or the roots striking manure that was not thoroughly decomposed. They take an abundance of water in the flowering season, but require very little in the early stages of their growth. They should be provided with proper drainage so that if too much water is given it will settle into the subsoil, and no bad results will follow.

Time of Flowering.

I find in experimenting with the newer varieties of sweet peas that some come into bloom ahead of the others. Take re-selected Earliest of All and Watchung, for instance. These two will come into flower fully two weeks ahead of the other varieties, and for early purposes they are a fine pair to grow together. They are both black seeded. These will flower in October if sown in August and will be in full crop for Thanksgiving. For a later crop I prefer Christmas Pink and Florence Denzer. These are the peers among sweet peas at the present time. The Denzer is two weeks later than Christmas Pink and is white seeded. It should be sown in sand and transplanted into flowering quarters at the time you sow the seed of Christmas Pink. They will then commence to flower together.

There is now quite a demand for some of the fancy varieties. These sell best in the Spring, but will soon get into demand all Winter. They are something new and the people are a little sceptical about buying them. They will, however, find a ready sale once there is enough of them around to attract attention. Among the new varieties I think Mrs. Charles H. Totty the best. It is the same shade as the Countess of Radnor, and is a very strong grower, having a two-foot stem. W. W. Smalley comes next. This is a shade of satin pink. It is a fine seller, but a trifle short in stem. Mrs. Alexander Wallace is a good one; the color is dark lavender and sells well. Mrs. William Sim sells well; the color is salmon pink. It produces very long stems, many being two feet in length. The improved Mrs. F. Dolansky I have great hopes in; it is the color of an Enchantress carnation. A limited quantity of Le Marquis and Christmas Captain can be sold; both are purple shades. The same may be said of Blue Bird, Mrs. Eddy Wild, deep crimson, but the flowers are small in size and the stems rather short. The latter is a strong grower.

Some Fine California Plants.

The illustrations shown herewith represent the Jubaea spectabilis referred to in issue of November 2, 1907; also one of a cinnamon tree, Cinnamomum zeylanicum, and one of a sturdy Phoenix canariensis, the base of which is surrounded and body covered with Nephrolepis exaltata. The sub-tropical flower bed is the place where the Japan lilies—speciosum rubrum, album and auratum—were grown successfully for the first time in the open in Southern California last season.

All these specimens have been growing in a blue grass lawn which requires lots of water during the Summer months from the hydrant, and during our rainy season gets from 15 to 18 inches rainfall. The subsoil in the part of the town where they grow is composed of sand, gravel and boulders, affording perfect drainage at all seasons of the year. Fertilizers in the form of cow manure and of the commercial sort are applied to the lawn to keep it in a luxuriant condition, which is all the attention these fine trees receive. The vine shown in the picture of the flower bed and of the house is a fine specimen of Bignonia buccinatoria also known as B. Cherere. It is an evergreen, and bears almost continuously, but not in great profusion at any one time, the largest and most brilliant flowers of any member of this family that has yet come under my observation. P. D. B.

AMONG THE GROWERS

Griffin Brothers, Frankford, Pa.

Having heard that Griffin Brothers, Frankford, Pa., had received a consignment of cattleyas, I thought now would be a good time to pay my old friend James a visit. James is the only surviving partner of the firm of Griffin Brothers, which was composed of James, Charles and William. In the early days this firm of energetic and ambitious young men grew bedding plants in quantity and moved them off quickly, but owing to their location being in the built-up portion of Frankford a profitable retail trade has developed, until now most of their product is disposed of at home, at good prices, and that is how the conditions of business arose, making it seem necessary to secure a home supply of orchids, the foundation of which was laid when a number of *Cypripedium insigne* was secured some time ago. The cattleyas which had been received recently were in all-right condition.

Mr. Griffin is fortunate in having a son who takes a great interest in his chosen profession, especially in the growing of carnations; and now orchids are claiming his attention. It is largely through the enthusiasm of the young son, Bruce, that the head of the firm has decided to acquire a collection of orchids. Those only that are the most popular among flower buyers in the retail trade will be secured.

Our London Letter.

BY A. HEMSLEY

THE ROYAL HORTICULTURAL SOCIETY. Among the most interesting plants which came before the floral committee at the last meeting was *Viburnum Carlesii*, from Northern China. The flowers were pure white, sweet-scented; and the foliage similar to that of *V. plicatum*. It gained an award of merit, and came from the gardens of Sir T. Lawrence. Daffodils are now a great feature at the meetings. Of all the newer varieties King Alfred will be the most useful for market work. Messrs. Carter & Company staged about 300 grand blooms. Arranged in a bed of green moss with good foliage they were most effective. Duke of Bedford, a large bicolor of the Ajax section, is another grand variety. The varieties of the Barrii section show great improvement, especially in the rich coloring of the cups, some being of quite a bright orange scarlet.

RAMBLER ROSES.—These are much in demand again this season and we are getting some fine specimens from several growers. Tall pyramids of Lady Gay from Messrs. P. Rochford & Sons, are beautifully flowered; some of the best make 30 shillings each. Cant's Blush, a single pale pink, flowers well early. I noted some grown with four plants in each pot, trained as pyramids, that were a mass of bloom. Tall standards of Dorothy Perkins, with long, drooping branches of large clusters of blooms, came from Messrs. H. Low & Company, who also exhibited standards of Madame Norbert Levayss.

floral committee. Some of the most interesting and the large variety of pointed blooms was introduced and the growth showed great vigor. I should mention that we do not see more of the variety later on. Melody was also well shown but appeared to be too much like Enchantress. Imperial was another which was well shown, but here none of the striped or variegated varieties find much favor with market growers. I have been looking for a good yellow, but have not yet been able to find one with the same habit as the American sorts which I could recommend. We seem to have quite lost Andalusia, which should have proved a good parent. The Malmaisons have been making good prices, but I find several growers are giving up the cultivation of them, as they do not bloom freely enough to be profitable. Best flowers have sold for 24 shillings a dozen, but it is only the extra fine blooms that are wanted. They have been more profitable to grow for selling as young plants, but I find some growers are offering them this season at about the same prices as ordinary border sorts. It is difficult to suggest what may prove profitable now, for since the American sorts have been extensively grown prices of the best blooms have come down considerably and second quality are of little value.

PRIMROSES. Messrs. R. H. Bath, Wisbech, now have a very fine strain of the blue variety. There may be a slight tinge of purple in it, but they are the nearest to a true blue that I have seen. Other varieties are also very fine this season. This firm's strain of pansies is peculiarly distinct; the bronzy red shades are specially selected from year to year. I have seen pansies in the

A Sub-Tropical Flower Bed at Los Angeles, Cal.

There is one great advantage that most orchids possess over all other flowers, and that is their keeping qualities. If they are not sold to-day, they surely will have customers before they show signs of wilting, which, in some cases, is not for several weeks. Besides, as an advertisement to a retail florist in the semi-suburbs, orchids are a good investment if given the necessary treatment to insure successful culture.

Mr. Griffin has secured from David Rust, receiver for the Graham Company's estate, the material from a number of greenhouses that were located at Olney, which are intended to be re-erected on a plot of ground near to Griffin Brothers' old homestead.

Winsor carnation is a great favorite here; so also is Beacon. The latter was a little off color at the time of my visit, but Bruce stated it is all right in winter. The Queen is the variety grown as a white for late Spring and early Summer blooming. A house of rose Kaiserin Augusta Victoria was showing well for a Summer crop. Lots of good flowering stock was left over from Easter and James was a trifle blue in consequence.

Another son, younger than Bruce, is helping to the best of his ability in all the branches of the business; his name is E. L. Griffin. It is to be hoped that he also will develop into an enthusiastic florist and that Bruce and he will continue the firm name of Griffin Brothers as successfully as their father and uncles have done.

EDWIN LONSDALE.

seem in fine form at the last meeting of the Royal Horticultural Society. Messrs. H. B. May & Sons do all the Ramblers well; when calling at their nurseries a few days ago I found they had a grand lot in various stages of growth. The best specimens of Hiawatha were not quite in flower, but were perfect pyramids of buds. The old Crimson Rambler is still a favorite here, and at the time of my visit was in grand condition. The dwarf sorts also receive special attention. Princess Eua, the single crimson (a sport from Madame Levayssure), is a useful variety. There has been some question about Phyllis and the Baby Dorothy being distinct; a large batch of each growing side by side showed that they were quite distinct, Phyllis being of a deeper color, the flowers not quite so full, and the plants not so dwarf as those of the Baby Dorothy. Some fine plants of Climbing Liberty were noted; the large plants as well as the young stock all showed a decided climbing habit. I understand that this variety originated with Messrs. May & Sons, but I do not know if the same sport has occurred elsewhere.

White Dorothy is another promising rose; this was shown recently by Messrs. B. Cant & Company.

The climbing Frau Karl Druschki sustains its character well and has been well shown by Messrs. H. Low & Company.

CARNATIONS. At a recent meeting of the Royal Horticultural Society A. F. Dutton submitted Mabelle; the

market with larger flowers, but I find they do not prove quite so satisfactory when planted.

ZONAL PELARGONIUMS. Paul Crampell is the favorite scarlet for bedding this season, and it will be extensively planted in the parks and other public gardens. Mrs. French and Mrs. Brown Potter are the popular pink varieties; and it will be difficult to find a better white than Snowflake. Mrs. H. Cannell is a favorite salmon. King Edward VII. does well in a favorable position if the ground is good, but I have seen some failures in poor soil. With the King of Denmark it is the reverse, for it will flower well in poor soil, but grows too rampant in good ground. I find that many growers still favor H. Jacoby, and it does well in some ground, but in a wet season it makes too much growth. For a bright blaze of color we have nothing to beat Vesuvius and West Brighton Gem.

I find that fuchsias will be extensively planted again this season. Years ago none thought of planting what are known as the greenhouse varieties; during the past few years, however, they have gradually come into use. For window boxes, vases on pedestals or for borders they are found to do remarkably well. It is only where they are much exposed to the winds that they prove unsatisfactory. I was doubtful if such heavy flowered varieties as Ballet Girl, Phenomenal, and other doubles could be a success, but they flowered beautifully in the open last season.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

Albany, N. Y.

EYBES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Boston, Mass.

WAX BROS., 143 Tremont St. Orders for New England States receive our careful attention. We are located in the theatre and shopping district. Telegraph and mail orders solicited. Satisfaction Guaranteed. Established twenty years.

Brooklyn, N. Y.

ROBERT G. WILSON, Fulton Street and Greene Avenue. Delivers anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders well cared for from all parts of the country, and delivered at Theatre, Hotel, Steamer or Residence. Telephones: Prospect 2840 and 4065.

Chicago, Ill.

HAUSWIRTH, The Auditorium Florist, 232 Michigan Avenue. The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

Denver, Colo.

THE PARK FLORAL CO., 1706 Broadway, J. A. Valentine, Frest. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Indianapolis, Ind.

BEETEMANN BROS. CO. Our facilities for executing orders in an efficient manner are unexcelled. Our shipping territory includes the surrounding states. High grade flowers; expert workmanship.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of reasonable varieties of flowers always on hand. Wire me your orders.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of reasonable flowers always in stock; delivery facilities perfect.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders, they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

Retailers desiring a share of out-of-town trade should be represented by a card in this column.

Stray Notes from Across the Atlantic.

Speaking of sweet peas, I have been telling all my friends about the novelty and beauty of the Burpee trophy, and it is safe to say that there will be a big fight for it. Although I am staunch to the trade, I want to see a private grower win that trophy, and I don't mind hazarding a shilling or two that a private man will win it.

Mr. Burpee is becoming as well known in this country as Eckford, for his name looms up pretty considerably. Apart from London, Burpee & Company are offering prizes at several provincial shows for the waved sweet peas, including their novelties.

It is interesting to note the remarkable vigor of the White and Cream Spencers compared with Etta Dyke and Clara Curtis, which are similar in form and color. The home-grown samples, however, are wretchedly weak, and were it not for Burpee's varieties very few of us would be able to put up a good display of these new breaks. The Burpee Spencers are little mountains of strength, but whether or not this is due to having been ripened under better conditions than home stocks I cannot say. One thing seems pretty evident, it will hardly be fair this season to say that Burpee's Spencers are

Phoenix Canariensis in California.

identical with the home sorts, for owing to the weakness of the latter, I anticipate that Burpee's varieties will be ahead on all points. The home selections can never hope to equal the American stocks for vigor, and, therefore, I venture to think that the floral committee, when judging at the Reading trials, will hesitate to declare them synonymous.

It is a well-known fact that Miss Philbrick is a stronger and better doer than Flora Norton, although the color is identical. Most English houses stand by the English raised Miss Philbrick. In this case the superiority of the English variety over the American is inherent, for Flora Norton is always weaker. It remains to be proved whether English white and cream waved sorts are inherently weaker than the American ones. If such is the case, Burpee's have every right to stand by their names; but we must have a good season before the matter can be settled.

I might just mention that the term Spencer is not a popular one here, and the National Society has decided to call them waved varieties. Orchid flowered, while appealing to some, myself included, is too lengthy and to others it is indefinite and so the term has been dropped. Under the circumstances, it will be as well if United States raisers dropped Spencer as a descriptive term. When used as part of a name, such as Countess Spencer, no exception can be taken. I am in the dark as to whether or not Morse & Company use the word Spencer simply to define the class their novelty stands in. Florence Morse Spencer reads like a name in full, for there is no other variety of similar color which compels a descriptive term such as Spencer. Eckford's, by the way, refuse to accept the word Spencer as a descriptive term. Waved is the one the firm uses in connection with all the varieties of the Fawin or Countess Spencer type.

There is no doubt but that Burpee's novelties have sold like hot cakes here, and of the thousands of packets and over, I venture to say very few remain at the time of writing (mid-March). Many other novelties, of course, are sold out; in fact, some were in such small supply that they were cleared out almost before they were really offered. This fact is sufficient to indicate that there will be trouble as regards fixity. Varieties such as The Marquis, Princess Victoria and Prince Olaf were practically cleared up by the end of February. James Grieve, the new deep cream sort, is also now on the sold-out list, for the demand has been very great. Mina Johnston and May Perrett have been and are still selling strongly, but owing to their being black-seeded and also to the fact that they were being grown on Eckford's Essex farm in acre patches, the supply of seed is hardly likely to give out, especially as the firm does a retail trade only.

It is curious to note that while the dark colors hung about early in the season, they are moving more strongly now that planting time is at hand. Horace Wright, David R. Williamson, and Duke of Westminster have sold very well, although, speaking generally, these dark shades are not nearly so popular as the pink and lavender shades.

The origin of the waved sweet pea has been the cause of much discussion, and not a little bitterness, in this country, but it has become apparent, to myself at all events, that we should have had the type, even had not Countess Spencer and Gladys Fawin arisen. The latter need hardly be taken into consideration, for while it and its progeny are very beautiful, they are not equal to the true Countess Spencer race. As I have before mentioned, both Countess Spencer and Gladys Fawin were at first stated to be breaks from Prima Donna, but after a couple of years one or two knights of the pen endeavored to disprove this. The parentage of the flower was actually given, but just how many took it for granted will never be known. One thing is certain, whatever variety was used for crossing, there was none that showed any tendency toward waviness, unless I except the Hon. Mrs. E. Kenyon, which has always shown a very slight ruffle. This being so, it is clear that the true waved type came unexpectedly, and, further, it came simply because the sweet pea had reached a stage, brought about by long years of breeding, which induced it to break away from the old type in just the same way as have the frilled begonias and cyclamens. That this is so is proved by the report in the Sweet Pea Annual, of a waved race of sweet peas being evolved by crossing Miss Willmott with Gorgeous, and again crossing the resultant seedlings with Scarlet Gem. This is a totally different parentage from that which brought about Countess Spencer.

Despite these reputed crosses I do not hesitate to say that the waved sweet pea would have come even had no cross been made. I firmly believe the break is due entirely to spontaneous evolution, spontaneous because it was not confined to any one variety to create the new type. This is proved by the appearance of Saint George, which is a selection from Gorgeous. Just how long Saint George will take to fix the waviness remains to be seen, but up to now it has not produced waved flowers entirely, although trueness of color has been proved.

It is interesting to observe, too, that the waved types are direct descendants from Eckford's varieties in every case. Even Gorgeous came as a selection from the old Meteor. The varieties that are traceable to this old variety are surprising. Gorgeous has for several seasons been running amuck, for Evelyn Byatt, Beatrice Whaley, Mildred Ward, Millie Maslin and Saint George are without doubt selections from it. Gorgeous, like Meteor, has finished its innings. What will follow Saint George?

I have been interested in the various notes dealing with sweet peas as shown at various meetings, and I found myself longing to get over to New Orleans, La., where the plants were blooming in February.

I have been watching the Zvolanek varieties over here, and growers to whom I sent samples of seed have also reported. Briefly, I am forced to conclude that we can never hope to grow these varieties as they are done in America. Poor light and lack of sun are the probable causes. Owing to this no amount of heat could be turned on; and at a Guernsey establishment the plants were ruined early in the season through keeping up a temperature of 60 degrees; 45 to 50 degrees is as much as we dare give them during the dull months, and consequently growth was slow. The first bloom was cut on March 5, the color being lavender, and curiously enough every grower reports the lavender as being the first to flower. As to their value as market flowers they have none, so far as March blooms go. The stems are of fair length and wiry, but the flowers are undersized and very thin. The color is very fugitive too, for the pinks quickly fade to cream, and the lilac becomes a pale lavender. Another failing is that, although the flowers are well expanded at the outset, they rapidly take on a terribly hooded form as soon as touched by sunshine. The growth is by no means as strong as that of the ordinary sorts, being thin and wiry, and the foliage is extremely narrow. Whether the blooms will improve later remains to be seen.

T. A. WESTON.

Chrysanthemum Society of America.

The report of the proceedings of the sixth annual meeting of the Chrysanthemum Society of America, held at the American Institute, New York, November 6, 1907, has been issued by Secretary David Fraser. The pamphlet contains the reports of the officers, the papers read, reports of the various committees on seedlings for the year, the appeal for closer affiliation with kindred associations and the conditions under which this is proposed to be effected, the official scales of points of the organization, a list of the varieties disseminated in 1907, and a list of the members of the society.

Secretary Fraser makes a plea for increased membership in the society, pointing out the efficient work the association is accomplishing on behalf of the chrysanthemum, rendering it worthy of the support of all who grow or are interested in that flower. His plea is particularly directed to young florists and gardeners.

The varieties certified during the year were:

Table with columns: Date, Name, Color and Type, Shown by, Points Scored. Lists various chrysanthemum varieties and their scores.

Without having any desire to be hypercritical, we would urge a somewhat more careful editing of this report. On page 11 the treasurer's name is printed "W. H. May," instead of John N. May. Several of the names of members are misspelled, and there are one or more listed who are now deceased, e. g., W. W. Edgar and Grove P. Rawson. These may seem minor details, but to overlook them is apt to create a jar.

Heating.

Growers' Problems Solved by U. G. Scollay.

Would it be possible for me to use steam to heat hotbeds, for the growing of lettuce? If so, how should it be done? I am a beginner, and a subscriber for The Florists' Exchange. G. N. E. Vermont.

—It is quite feasible for you to use steam for hotbeds, the pipes to enter the frames, allowing the entrance to be the high point and drop to the far end, and then drop back all the way to the return. This makes a simple arrangement. I think, though, that you will get better results if you do not have too many frames by using hot water. However, for the ordinary hot-bed bed, and a temperature of 45 degrees, I would suggest that you use three 4-inch pipes. These could be properly placed so that one could be shut off entirely, while two could be in operation, and at the main connections, both supply and return, a main valve could be put on so that an entire frame could be shut off while the others are in use. You do not state how many frames you propose to erect and I, therefore, cannot suggest to you how to arrange the piping. U. G. SCOLLAY.

I wish to heat a greenhouse, 18 by 50 feet, with two feet of glass on sides, to 60 degrees, outside temperature 10 degrees below zero, with hot water. How many 4-inch pipes would I need, how many flows, and how many returns? Would you recommend 4-inch pipe if not, what size? How many pipes under each bench? There will be two 4-foot benches on one each side, and one 6-foot bench in the middle. L. D. P. Ill.

Put in the house ten 4-inch pipes. Under each side bench place four pipes and two under the middle bench. Each of the side benches will have two flows and two returns. The middle bench will have one flow and one return. Keep the pipes under the middle bench about 4 feet apart. You will find 4-inch pipe to give you good results. The writer in his experience has used many thousands of feet of this size and in many cases prefers it to smaller size of wrought iron pipe. U. G. SCOLLAY.

Pittsburg.

Trade Notes.

Trade has been very quiet since Easter, if it had not been for tinctorial work it would have been very dull indeed, for very little was doing in society affairs. The coming week promises a little better. The Grant anniversary banquet of the American Club is regarded as one of the most important gatherings of the leading lights in national affairs, which brings many distinguished people to the city, and the decorations are usually very elaborate. Also the grand opera and several prominent wedding should give some work to the florists. Stock is abundant and prices low. Good lilies bring 1c., roses about 3c.; bulbous stock at all prices, too much outdoor grown coming in. Plant trade is also rather quiet, while the seed trade has been unusually good.

Wm. Loew has rented a nice room on Diamond street, second floor, for the sale of cut flowers, floral work, etc. He has been in the florist's business for many years and is known by everybody around

the market and manages to get considerable funeral work, usually good orders.

Walter Hinkel, a North Side market florist living in West View, was married a short time ago to Miss Lena Birschire. Last week a good many of his friends tendered him such a send-off as he will not forget in a hurry. The Alpine Brass Band was engaged by the serenaders to furnish the music and Walter was compelled to furnish the refreshments.

A few Holland bulb dealers were in the city the past week, but they are not getting orders as fast and large as heretofore. Many of the growers get stuck on bulbous pot plants, these not making enough to pay for the bulbs, so are very slow about ordering for next year.

Tuesday, May 5, is the next date of the Florists' Club meeting in our regular meeting room on Sixth avenue. The subject for discussion is "Bedding Plants," with an exhibition of suitable stock. A few of the members will be requested to talk on certain plants, and as the bedding plant season soon opens up this should be of interest to many.

The weather has been very Spring-like for some time. Everything outdoors in the bulbous line is in bloom; tulip beds are gorgeous, the quality of the bulbs being very good all around.

The flower shows in the park conservatories were visited by many thousands of people last Sunday, the day being fine and warm, but rather hot under glass.

Adam Pfeifer, aged 87, died April 24 at the home of his son, William Pfeifer, 1211 Rush street, North Side. Mr. Pfeifer had been employed in the green-houses in Bellevue for many years. He is survived by four children: William Pfeifer, George Pfeifer, Mrs. Clara Seigmann and Mrs. William Marzok.

The Pittsburg Rose & Carnation Company contemplates building a few more houses this season, plans already being prepared. The past year the firm had a few important improvements—new roller sheds and refrigerating plant. E. C. REINMAN.

ALVIN TEX—C. W. Benson has received from the representative of the Governor of Texas an order for 2,000 gardenias to be used at the White House, Washington, D. C., at the conference of governors called by President Roosevelt for May 13.

GARDENIAS

(Grandiflora Cape Jessamine Buds)

One Dozen Gardenias One Week After Cutting

Stock ready for May 26th, and season will continue until June 5th. Not one florist in ten east of the Ohio and Pennsylvania State line has seen our stock. In the West, and especially in the Northwest, we have supplied 75 per cent. of the florists in certain States at various times.

This variety is about 40 per cent. larger than Gardenia Florida. It reaches destination under our system of packing, pure white and with full retention of perfume. This flower will cost only a trifle more than one dollar per hundred, laid down in the Eastern Zone. The foliage is one of its most attractive features.

A very great number of florists have written us in substance: "I wish I had found you sooner!"

We hope the time will come when this community of friendly growers will supply every florist in the country with this beautiful flower.

Give us a small weekly standing order for 200 buds for one season and you will be glad to keep our name where you can find it in future.

We have over 5,000 customers on our list and several hundred of them have given us annual orders for the past ten years.

Quotations following are NET F. O. B. here.

Standard stem, extra good foliage; first quality buds, per 1000 \$7.50 (Five Hundred at Thousand Rate.) On orders of 3,000 or more, per 1000 6.50 Less than 500 buds, per 100 85

C. W. BENSON & COMPANY ALVIN, TEXAS

Worcester, Mass.

The quality of Worcester flowers this season is of a higher grade and standard than ever before. The roses and carnations coming in from the Worcester Conservatories are superb, showing great care, skill and forethought; several dealers who have been buying out of town heretofore have seized upon this opportunity of getting high-grade home-grown stock.

Lange has put out in front of his store an unique sign which causes people to stop, pause and consider before going farther, a happy thought which will be worth dollars.

Several department stores here are having a Cheap John sale of nursery stock from some far-away nursery.

Brandt Brothers have appeared on the streets with their pansies.

The seed trade at Ross Brothers' store is reported as above the average, indicating much activity among the growers. O. S. RYER.

PROVIDENCE, R. I. On the night of April 22 thieves broke into the green-house and office of Johnston Brothers at 162 Rockman avenue and stole four overcoats valued at \$82.

MIDLAND, ONT. A correspondent advises that Mrs. W. G. Whitney, florist, has had the misfortune to lose all her plants by frost. Her husband is not at present available to assist her, and she has four children to support. Mrs. Whitney will be thankful for any help the trade in their generosity may afford her.

WASHINGTON, D. C. Alonzo Henrick, horticulturist at the Government Hospital, is dead. Mr. Henrick was born in Copenhagen, Denmark, March 18, 1833. At an early age he came to this country and for the past forty-five years had been a resident of the District of Columbia. He was appointed horticulturist at the Government Hospital in 1876 and during his thirty-two years' service it is said developed one of the finest vineyards and fruit orchards in the country.

With the close of business for the Easter season weather conditions changed from those of March to Midsummer. The effect is evidenced especially in winter-flowering stock such as carnations and roses. Many of the former are annually retained even as late as the 20th of June, when the schools close, but the warm weather coming so early greatly interferes with this work. Sweet peas are becoming plentiful and thus far have sold quite readily.

Many dinner parties are keeping the decorative artists busy.

Gude Brothers are growing one whole house of the new pink rose My Merry bud. JAS. L. CANNON.

SYRACUSE, N. Y. Harry E. Bell's list of names bears testimony to L. E. Marquise, spring a great surprise on his friends by being called, married to Miss Laura C. Andrews. The ceremony took place Easter Monday evening and was performed by the Rev. Dr. Fulton. Harry's friends are legion and they wish him and his lovely many years of happiness and prosperity. H. A. Y.

New York.

The Week's News.

The Horticultural Society of New York will hold its eighth annual meeting and exhibition in the Museum Building of the New York Botanical Garden, Bronx Park, on Wednesday, May 13, 1908. At the meeting, which will take place at 4 p. m., the annual election of officers will be held. Dr. B. T. Galloway, Chief, Bureau of Plant Industry, United States Department of Agriculture, will deliver a lecture, illustrated by stereopticon, on "The Foundations of Successful Violet Culture." A vote will be taken on some proposed amendments to the constitution, including one providing for associate membership, with annual dues of one dollar.

The newly established orchid section of the society will hold its first meeting on Wednesday, May 13.

There will be an exhibition of plants and cut flowers for which substantial premiums will be offered. The council has placed at the disposal of the orchid committee one gold medal, three silver, and three bronze medals, which may be awarded at the discretion of that committee for special exhibits of new or rare plants or for other orchid exhibits of merit not provided for in the schedule of prizes.

The American Rose Society has accepted the invitation of the Horticultural Society of New York to hold its Summer meeting and exhibition of garden roses in connection with the June meeting. On account of the uncertainty of the weather conditions the exact date cannot now be announced. Anyone, not a member of either society, will be notified, if an application is sent to Leonard Barron, secretary, at 55 Liberty street, New York. There will be an address on "Garden Roses," by W. C. Barry, and an exhibition of lantern slides of rose types and rose gardens, by Mr. Barron. The meeting will be held in the New York Botanical Garden.

Robert Craig and S. S. Pennock, both of Philadelphia, and Wm. F. Wight of the United States Department of Agriculture, Washington, D. C., were visitors this week.

To-day (Saturday) the annual meeting of the stockholders of the Cut Flower Exchange is to be held in the offices on Twenty-sixth street and Sixth avenue. The Board of Directors will submit a proposition to the stockholders to open the market at 7 o'clock each morning from October 1 to April 1, and during the balance of the year to open the market at 6 a. m., as is in force at the present time. This proposal was unanimously approved by the directors at their last meeting. At the meeting to-day there will also be an election of four directors to fill the places of Charles Beckman, J. Leach, W. H. Siebrecht and David Deans, whose terms expire this year. It would seem that the resolution to open the market at 7 a. m. from October to April is a good idea, and, if adopted, will be a step in the right direction. Seven o'clock is certainly early enough to open a cut flower market during the winter mornings, especially when we take into consideration the distance of the greenhouses of some of the growers from the market, and the time they have to start from home when they wish to reach a market that opens at 5 or even 6 o'clock in the morning.

John Kral, the popular salesman of Moore, Hentz & Nash, wholesale florists at Twenty-sixth street and Sixth avenue, is in the German Hospital, where he underwent an operation on Saturday last. We are glad to say that Mr. Kral is getting better, and a full and complete recovery is assured.

Southern lilac is coming into this market this year in enormous quantities, much more so than has been the rule, we think, for several years past.

H. N. Jacquemont, a well-known landscape gardener, who resided at 481 Central avenue, Jersey City, died suddenly in New York on Friday, April 24. Mr. Jacquemont was sixty-nine years old, and up to the time of his death had enjoyed unusually good health. He came to this country from France some thirty-five years ago, and had always been a resident of Jersey City. A widow and six children survive him. The interment was in Fairview Cemetery, Jersey City. Henry Matz has purchased the Glen Cove Greenhouses at Dosoris and Wool-

OUR NEW TRADE LIST MAILED ON APPLICATION. ADDRESS

THE GOOD & REESE CO., The Largest Rose Growers in the World. Springfield, Ohio

sey avenues, Glen Cove, L. I., and took possession Friday, May 1. These greenhouses were hitherto conducted by Felix Mense, and a general retail business was done. Mr. Matz will continue the business, and in addition to the general run of retail trade will make a specialty of landscape work. For the past eight years Mr. Matz has been superintendent of Germelwood, the country place of the late L. J. Busby, and had previous to that time considerable experience as a florist.

Daniel Cole, the well-known retail florist of 116 Newark avenue, Jersey City, and Miss Anna May Baumann, 3837 Boulevard, West Hoboken, were united in marriage on Sunday evening, April 26, at the home of the bride. After the ceremony an elaborate dinner was served to about thirty-four friends of the contracting parties. J. K. Allen, wholesale florist, New York, was one of the invited guests. Mr. and Mrs. Cole are spending their honeymoon at Niagara Falls.

William Elliott & Sons, the well-known seedsmen, are moving from 201 Fulton street to 42 Vesey street. They held their first auction sale of plants at the new quarters on Tuesday. The new auction room is more airy and lighter than the one vacated. Auctioneer Elliott is delighted with the change and says that while it is a big job moving, it has certainly been worth the trouble. The consignments of plants to the auction room moved easily and gave much satisfaction to consignors.

Boston.

News Notes.

R. & J. Farquhar & Company exhibited a collection of seedling lilies, crosses between L. longiflorum and philippense, at Horticultural Hall on Saturday for the consideration of the plant and flower committee. A variety marked No. 1 was awarded a first-class certificate of merit.

The Waban Rose Conservatories have decided to retain the name of White Killarney for their new rose. Many requests were made by people unfamiliar with roses for the name to be changed to Mavourneen, but a publication of intentions to change the name soon brought out the fact that the name Mavourneen was already applied, it having been used by the raisers of Killarney for a rose several years before they introduced the latter variety.

George Moore, who died in Quebec last week, an able writer and lecturer on horticultural topics, was well known some years ago in this city, he having been superintendent of the Waban Conservatories for several years before rose growing had been thought of as an exclusive crop for one establishment.

Daniel Hiffe has been busy getting up a number of sets of his new ventilating apparatus, he having already installed several sets for M. Aylward, Hugh Cameron and others.

Peter Fisher is not much pleased with the behavior of some of the highly recommended English varieties of carnations. He says that the varieties Mrs. Burnett and Britannia are almost complete failures with him.

A prominent horticulturist who is given the credit of knowing whereof he speaks says that in a few years the camellia will be a favorite flower and will be more sought after than it was in the good old days of long ago.

J. W. DUNCAN.

St. Paul.

News Notes.

L. L. May & Company and Holm & Olson are doing landscape work in the city. The call for this work now is very heavy.

The Twin City Florists' Club met at the City Park Greenhouses, Minneapolis, on April 21. Mr. Boeglin read a very able paper on "Bedding Plants" which was very nicely illustrated by the new varieties being grown by him. Among other good things Salvia Zurich was greatly admired. Mr. Rosacker spoke on fire insurance and the secretary was authorized to request the S. A. F. O. 11, to look into the matter of rates and endeavor to obtain a fair and equitable adjustment of them. The next meeting will be held May 18 at Holm & Olson's store, St. Paul.

J. Hoffman of May's store is passing around the cigars on account of the arrival of a 12-pound boy at his home a few days before Easter.

Visitors since last report: C. S. Ford, Philadelphia, and A. Currie, Milwaukee.

VERITAS.

For particulars, address J. A. Manda, 191 Valley Road, West Orange, N. J. FOR SALE OR LEASE—With privilege of purchase, four greenhouses, located near a flourishing town, 21 miles from New York, with two acres of fine land. Full stock of pot and bedding plants. Good trade in cut flowers and plants at the door. Inspection invited. Address, F. J., Box 93, Summit, N. J.

FOR SALE—A well established retail florist business in a live manufacturing town in South Jersey. Three houses, 3250 feet of glass. A fine opportunity for a man desiring to start in business for himself or two young men to work together. No reasonable offer refused. Best persons for sellings. For particulars address, O. O., care The Florists' Exchange.

FOR SALE—Chance of a lifetime. On account of my husband's death I desire to sell the business and property which consists of eight hothouses filled with different plants as the market here requires. Also cottage with eight rooms and barn, five acres of land in good condition, besides beds and two hot-water boilers in good condition. If interested, please address, Mrs. Hugo Book, 10 College Street, Worcester, Mass.

TO LEASE—The old well known florist establishment of E. Bendt (deceased), located at Orange and Sixth Streets, Newark, N. J., well equipped for the Spanghord trade, consisting of eight greenhouses, stone, six lots of land, wagon sheds, stable, etc., doing a profitable business. Is to be leased for a term of years to a responsible party. The establishment can be inspected at any time and full particulars can be obtained by calling or writing to E. Bendt Estate, Orange & Sixth Streets, Newark, N. J.

VIOLET CULTURE

Price, \$1.50 Postpaid. A.T. DeLa Mare Pte. & Pub. Co. Ltd., New York

Elmira, N. Y.

The Daily Advertiser of April 22 has a full page devoted to a history and description of the business of the United States Cut Flower Company...

The first fiscal year of the company ended June 1, 1905. This period covered the construction of the plant, and while construction was going on it was impossible to operate the plant and produce flowers in time for the best near lots...

The company employs no traveling salesman. Leon Compton, son of the president and manager, is in charge of the shipping department...

Credit for the development of the United States Cut Flower Company must in a large measure be given to the energy, enterprise and business ability of William R. Compton...

WORCESTER, MASS. Easter trade this year was entirely different from years heretofore. The volume of business was greater, but the receipts were much lighter, owing to the drop in price of lilies...

H. F. A. Lange had a heavy trade. All orders and shipments were made from the greenhouses, while a force of 25 was rushed night and day, and a store force of nine.

H. F. Littlefield had an enormous trade. In his branch store the sales were more than doubled over last year's. Twenty-two clerks were necessary to attend to the business...

WOOD BROTHERS, Fishkill, N. Y.

GREENHOUSE MATERIAL FURNISHED AND ERECTED. WRITE FOR PRICES. I. CASSIDY, SUMMER AVENUE AND 1711 R. R., Newark, N. J.

Lewis employed a force of eight men other than lilies, azaleas, were his leaders. Mr. Lewis was overstocked, and is reported as carrying over hundreds of lilies.

C. H. Mackie had a better clean up of plants than anyone else. He had a heavy stock which required 12 clerks to clean out.

The Boston State (Dandolin & McKay Co.) increased its force to seven. The window display of lilies and plants was the most in the city. Much credit is due Mrs. J. L. Hoyle, manager of this department.

Mrs. Fisher reports sales smaller in size this year, but more of them. She lays this to the big Chelsea (Mass.) firm a short time ago. Many of the churches bought lighter than usual, sending the money, instead, to the surf-baths.

Mrs. Hugo Book had two more lilies out of the florists at the last moment, secured in order for 200 pots.

Herman Schneider has no sales, he had a large wholesale business. As a whole none of the florists had a very complaint, the lilies and azaleas being taken into consideration.

ROONE, W. V. H. Saver, who has been in this city for some time past as manager of the Northwestern Nursery Company, has resigned his position and will in the future devote his time to the landscape business.

SEAL, HARROP, ME... THE FLORISTS' EXCHANGE.

THE WEEK'S WORK

Timme's Timely Teachings.

Azaleas.

Of hardwooded holiday plants remaining for another season in the keeping of the grower, none are more worthy of being properly cared for than azaleas. Deciduous azaleas of the pontica and other garden species fare best by being planted back in the open ground. A sheltered situation, neither too sunny nor too densely shaded, and a friable black, sandy loam on gravelly subsoil, suits all plants of this character—rhododendrons, kalmias, etc. The majority of florists, looking in vain for a place of this description about their premises, will do fairly well, and their left-over plants also, by bearing in mind what was merely intended as a hint and doing justice to the requirements of valuable stock as far as circumstances permit. Evergreen azaleas of the Chinese section remain in pots. Should some of them need transplanting it had better be attended to at once before the new growth has advanced to any great extent. Imported stock, properly planted into well-drained pots and well-firmed, good soil last Fall, standing straight, dropping no leaves, having flowered without a hitch in the perfect and uniform expansion of the buds, should not be transplanted. They should be cleaned of faded flowers, cut in here and there if out of evenly balanced form—not pruned back into graceless shape—he laid on their sides and given a hard syringing on stem and lower side of branches and foliage. A thorough cleansing of this kind takes but little time, and few are the plants among retainers of this class not greatly benefited by it. Then these azaleas should be permitted to complete their growth in an airy, light greenhouse, before being plunged in the open. Here it is of value to remember that shade preserves the fresh green of their foliage, while sunshine is the prime factor in perfect bud formation.

Bouvardias.

When root propagation has been resorted to in providing flowering bouvardias for next Fall and Winter, the young stock should now be in small pots or, if still in the sand, be ready for being potted up. Any further attempts at multiplying bouvardias by cutting up the roots of old plants after this date is slow work not often rewarded by any great yield of promising young plants. Cuttings taken from varieties that flowered last Summer or very early in the Fall, that have been rested and again started quite early into new growth, may still be rooted where in a hothouse a pretty warm propagating bed is in operation as late as this. Another opportunity for propagation by cuttings is offered in Midsummer, this mainly for stock to be flowered the following season either as bedding material or as extra large specimens for Fall and Winter bloom. Florists in following either of these methods must figure on steadily maintained heat during root formation and a shaded, fairly warm and somewhat closely kept place for at least a week after the rooted cuttings have been potted up. In the open ground during Summer even those bouvardias solely grown for their flowers in Winter attain that degree of sturdiness and vigor which the best of care cannot impart to plants continually grown in pots or under glass. Caution in not planting them out too early, or in lifting and bringing them in too late in the Fall, is necessary. Outdoor frames for the young plants before being planted out, and again in September after being lifted and potted, best serve the purpose of preparing the plants for the radical change, a course even advisable should bench culture for the mass production of cut flowers be the object. Bouvardias from now on and while in field rows must be cut in or stopped at regular intervals, be watered in dry weather and faithfully cultivated.

Peonies.

In the herbaceous plant border more or less destruction is wrought by every passing Winter, and there is need of close examination of making and correcting notes, and of a general straightening up, filling in and setting things to rights again every Spring. Cold not so much as its indirect workings and a

host of destructive agents following in its wake, such as the decay of the crowns and the drying out of the roots or loosening and upheaval of the plants and subsequent exposure, are to blame for the partial or entire loss of the stock. Late Autumn planted and insufficiently established perennials, not properly protected, suffer most, should be examined before considerable growth has been made, and if found to be lifted and loose be placed deeper, be reformed with the feet into proper position. Newly planted peonies are disturbed as much as any other plants by the action of frost in the soil, more than is generally believed, and their struggle to regain firm hold is greater, resulting in a loss of vigor easily noticeable throughout a period of years. All this loss of time toward being amply repaid by abundant crops of bloom in the near future is easily prevented, either by a good covering of the newly stocked field in the Fall or if this was not done, by righting matters in the ensuing Spring. Older plantations, fields yielding good crops annually, may now also stand in need of the grower's attention. Deep digging should never be attempted near or about established plants. The Winter mulch should be lightly forked under, the weeds be pulled from near or out of the bushes and—as it sometimes happens—if dry weather should set in while buds are forming and blooms coloring the hose should be used unsparingly.

Bedding Plants.

The growth of bedding plants now is so rapid that to afford the hundreds and thousands of the numerous kinds the proper care as called for in every instance is no easy task. Still this is of as great importance now as at any previous period in their raising. There are a few of the fastest growing annuals for which there is quite a demand every Spring, that by reason of their fast growth are among the best paying of bedders, annually offered in limited numbers by retail growers. These are started late, and a last sowing of such things as cosmos, marigold, scabiosa, zinnia, aretofis, nasturtium, balsam, stocks, bedding asters and annual pinks might still be made and result in good salable stock before the bedding season comes to a close. The more important kinds of bedding stock are now beyond their last transplanting, the greater part in 2, 3 and 4-inch pots. All these now need constant watching so as not to let them suffer for the want of water. Two-inch plants especially—and this includes all species of outdoor and indoor cut flower stock for home culture, during next Summer or Winter as also the coming season's greenhouse plants, in small pots at present—dry out remarkably fast on bright days with their full allowance of fresh air and ever thirsty roots. The proper time of day to water this sort of stock now is just as soon as it needs watering, whatever hour of forenoon or afternoon this may happen to be. While tolerably firm root balls are a desirable quality of bedding plants sold out of pots, hardened fibers or over-rootbound balls detract from their value, and this to a greater extent than any number of flowers on the plants can make amends for.

Flower Show at Massachusetts Agricultural College.

The exhibition of flowers and plants at the Massachusetts Agricultural College, Friday, April 21, and Saturday, April 25, was the finest held in this vicinity for several years.

F. R. Pierson Company, Tarrytown, N. Y.—White Enchantress, Victory, Melody, Winsor, White Perfection, Beacon.

William Nicholson, Framingham, Mass.—Fifty blooms Afterglow.

W. A. Manda, South Orange, N. J.—Pink Pearl, a new seedling; also a new seedling of hardy dianthus, specimens of his Cherokee roses and green rose.

Peter Fisher, Ellis, Mass.—Alma Ward, Winsor, Snowflake, Rose Pink Enchantress, Beacon, Mrs. Tom Harvey, Evangeline, White Perfection, Mrs. C. W. Ward, Enchantress; also four seedlings under number.

S. J. Goddard, Framingham, Mass.—Helen Goddard, Winsor, Victory, Britannia, White Perfection, Octoroon, Lady Bountiful, Enchantress.

Patten & Company, Tewksbury, Mass.—Helen Goddard, Harry Penn, Octoroon, Victory, Joseph H. Manley, Winsor, Variegated Lawson, Beacon, Red Lawson, Pink Patten, White Lawson, White Perfection and Enchantress; also eight seedlings under number.

H. H. Rogers, South Sudbury, Mass.—Mrs. T. W. Lawson, Fair Maid, Winsor, The Queen, and three seedlings under number.

H. W. Field, Northampton, Mass.—Viola Sinclair, Prosperity, Enchantress, President Seelye carnations; Bride, Bridesmaid, Richmond and General MacArthur roses; pansies, nasturtiums and sweet peas.

J. W. Adams & Company of Springfield sent fifty Prosperity.

Peirce Brothers, Waltham, Mass.—Mrs. T. W. Lawson, Governor Guild seedling, Enchantress, Rose Pink Enchantress, White Perfection.

The Cottage Gardens Company, Queens, N. Y.—President, Snowflake, Beacon, Mrs. C. W. Ward, Alma Ward, Mrs. Tom Harvey.

William Sim, Cliftondale, showed splendid specimens of the following sweet peas: Mrs. William Sim, Le Marquis, Mrs. F. J. Dolansky, Mrs. Alexander Wallace, Jack Hunter, Christmas Captain, Christmas Pink, Mrs. W. W. Smalley, Florence Denzer.

Especially admired was a vase of thirty magnificent, long-stemmed American Beauty roses from the Waban Rose Conservatories; also Killarney and Richmond.

A. N. Pierson, Cromwell, Conn., sent fine Bride, Bridesmaid, Killarney, Mme. Abel Chateau and Richmond roses.

The Massachusetts Agricultural College devoted one room to named specimens of decorative foliage plants.

Friday afternoon G. H. Sinclair of Northampton addressed the students of the horticultural seminar on the subject of "The Carnation: its Culture and Development."

REVIEW OF THE MARKET

NEW YORK. The cut flower market... what may be called in a flooded condition. There is too much stock available...

Lilies are still a glut and can be bought at anywhere from \$2 to \$4 per 100. The last named genus is applicable chiefly where a few dozens are used...

With the month of May just beginning, a month which to the superstitious is supposed to be an unlucky one for weddings...

By Wednesday morning stock had accumulated to such an extent that some of the best carnations in the market were sold at \$7.50 per 1000.

PHILADELPHIA. The cut flower market is still unsatisfied, stock is moving very slowly. There seems to be an overproduction of white carnations...

INDIANAPOLIS. No heavy movements have occurred in the flower market during the past week. Funeral work seems to be the industry of the retailer...

DAVENPORT, IA. John T. Tench says Easter trade was about as large as last year's, not as large orders, but more of them people...

LINCOLN, NEB. Easter is now a thing of the past. The weather was fine and there was plenty of stock in fact...

CHICAGO. The market is in a demoralized condition. Much more stock is arriving than can possibly be sold, consequently there is no bottom to anything...

BOSTON. There is little doing, and were it not for the fact that the flowers are not reasonable the conditions in this city are almost that of Midsummer dullness...

ST. LOUIS. Ever since Easter the cut flower trade both wholesale and retail has been exceptionally slow. Some of our leading retailers say they never saw business so inactive as it was the past week...

ST. PATRICK. The cut flower trade both wholesale and retail has been exceptionally slow. Some of our leading retailers say they never saw business so inactive as it was the past week...

LATE EASTER REPORTS

LOWVILLE, N. Y. The past Easter was the best I have had since I started in business here - W. R. KEAY.

VICTORIA, B. C. Easter trade in comparison with last year was larger in volume but prices were lower. There was nothing special to note. The supply of stock was about equal to the demand...

NEW BEDFORD, MASS. Everyone is well satisfied with the Easter trade of 1908. About everything salable was cleaned up with prices fairly good...

LEITCH, MOUNTAIN STATE. NEW BEDFORD, MASS. Everyone is well satisfied with the Easter trade of 1908. About everything salable was cleaned up with prices fairly good...

TOLLEDO, O. The Easter business was most satisfactory to everyone here. The growers cleaned up nicely, every pot plant that showed a semblance of a flower...

ROME, N. Y. Easter trade was better this year than last. Lilies were good, but were short. Carnations were plentiful and good. Roses all sold at good prices...

ST. PAUL. The biggest holiday of the year in the florist's calendar has passed once more and a review of trade conditions at this time is interesting. The rain struck Minnesota on Good Friday...

ETTERA, N. Y. Easter trade from all sources is reported as having been very good, in fact much better than expected. Lilies were in plenty but of a rather short growth...

CHARLESTON, W. VA. Easter trade was about equal to that of last year. There was a decided falling off in the 25c and 50c pot sales...

LEITCH, MOUNTAIN STATE. NEW BEDFORD, MASS. Everyone is well satisfied with the Easter trade of 1908. About everything salable was cleaned up with prices fairly good...

LEITCH, MOUNTAIN STATE. NEW BEDFORD, MASS. Everyone is well satisfied with the Easter trade of 1908. About everything salable was cleaned up with prices fairly good...

LEITCH, MOUNTAIN STATE. NEW BEDFORD, MASS. Everyone is well satisfied with the Easter trade of 1908. About everything salable was cleaned up with prices fairly good...

LEITCH, MOUNTAIN STATE. NEW BEDFORD, MASS. Everyone is well satisfied with the Easter trade of 1908. About everything salable was cleaned up with prices fairly good...

LEITCH, MOUNTAIN STATE. NEW BEDFORD, MASS. Everyone is well satisfied with the Easter trade of 1908. About everything salable was cleaned up with prices fairly good...

BUFFALO, N. Y. The business for Easter in Buffalo was up to the standard as far as work was concerned, but it will be many years before the florists in the United States will be able to get prices similar to those for Easter 1907...

W. J. Palmer & Son report good sales in everything in their good assortment in the plant line. This firm sold 50,000 violets alone. Roses had fair sales, prices ranging from \$2 to \$12 per dozen...

ST. PAUL. The biggest holiday of the year in the florist's calendar has passed once more and a review of trade conditions at this time is interesting. The rain struck Minnesota on Good Friday...

ETTERA, N. Y. Easter trade from all sources is reported as having been very good, in fact much better than expected. Lilies were in plenty but of a rather short growth...

CHARLESTON, W. VA. Easter trade was about equal to that of last year. There was a decided falling off in the 25c and 50c pot sales, as the poorer class of people did not have the money to buy them...

LEITCH, MOUNTAIN STATE. NEW BEDFORD, MASS. Everyone is well satisfied with the Easter trade of 1908. About everything salable was cleaned up with prices fairly good...

LEITCH, MOUNTAIN STATE. NEW BEDFORD, MASS. Everyone is well satisfied with the Easter trade of 1908. About everything salable was cleaned up with prices fairly good...

Trade Notes.
We are drifting along at the regular election year speed, and are thankful for the spurts caused by large funeral orders last week. Bulbous flowers help to glut the market, still we do not complain.

A more cheerful report comes from the outdoor men and we are glad to see a most prosperous season for nurserymen and landscape gardeners.

The suggestions of Park Commissioner Breitmeyer for a systematic battle against scale are being carried out; several men are inspecting trees and shrubs in public as well as private places and all infested shrubs and trees are thoroughly sprayed.

The work of the City Service League, to improve the yards and streets of the city, meets with general approval. Local papers have opened their columns for discussions on the subject of planting shrubs and seeds. This is supplemented by published drawings from William Dilzer showing how to plant city lots. Frank Danzer is drawing plans, showing how a city lot can be improved for a small amount. These latter cover a series of plans, the suggested improvements starting with an outlay of \$2 and finishing with an outlay of \$50. Follow this up in your city; it all helps to make our labors more appreciated. FRANK DANZER.

LOWELL, MASS. Richard A. Griffiths, the Central street florist, has been named by Mayor Farnham to be a trustee of public burial grounds for a term of five years commencing with the ninth of the current month. Mr. Griffiths has served a year as a member of the commission, having been appointed by Mayor Farnham for the short term a year ago when the commission succeeded the old board of trustees in the management of the Edison and other public burial grounds. Mr. Griffiths was a member of the old board, having been appointed a trustee in 1906 by former Mayor Crosby.

Philadelphia.
Trade News.
 Mrs. John A. Claus, 1959 Germantown avenue, has a very attractive stock and says she did a very good business Easter week. Mrs. Claus has recently become a member of an association made up of Kensington merchants for the promotion of "home trade" and says that it is helping business along very nicely, as the local people are buying more goods in Kensington than formerly. She has four greenhouses from which she does a wholesale business.
 Henry Meyn, 2045 Germantown avenue, says he is not complaining, as just at this time he is kept very busy making designs. Some very nice pieces were shown awaiting delivery.
 Thomas E. Henry, 2223 Germantown avenue, had a very good Easter trade in plants, although cut stock went fast also.
 August Muller, 217 South Eighth street, has a splendid display of plants and is doing a fair business.
 In the public parks and city squares the flower beds are abloom with hyacinths, tulips and daffodils, very prettily arranged in harmonious design, the work of City Forester Lewis. The bulbs used were furnished the city by the Henry F. Mitchell Company, the number being over 135,000.
 J. W. Koch, formerly paying teller with the Third National Bank of this city, is now in charge of the P. B. Mingle & Company seed store, 103 Market street. This store is over 75 years old and for a number of years was run by Mr. Koch's father. Mr. Koch says the present selling price of \$13 per bushel for clover seed is the highest known since the wartime price.
 Walter P. Stokes, 219 Market street, was one of the local men to take the jaunt to Washington last week to see Mr. Mann.
 Wm. J. Baker, 1432 South Penn Square, has a very attractive stock of cut flowers, but says that business is not as good as he would like to see it and that it does not compare with that of last year.
 Edward Reid, 1526 Ranstead street, is showing some fine roses and sweet peas. Mr. Reid appears to get a good share of the going trade.
 John McIntyre, 1601 Ranstead street, seems to have the happy gift of telling in advance just what kind of stock to handle, and this has always resulted in a good business, both for the shipper and himself. At this time he has a quantity of lilac and is also showing some splendid sweet peas in all colors.
 The Philadelphia Flag Company, located at 1027 Ridge avenue, is making a specialty of florists' felt and gold letters for design work. These letters run from one-half inch up to the larger sizes. L. C. Hall says they have sold more of this class of work this season than ever before.
 The seed store of Robert Enist Company, South Front street, is receiving a number of good orders from out-of-town people for garden seeds. The firm is doing more business than ever before at this season of the year.
 Berger Brothers Company, 1305 Filbert street, is having a fair trade at this time. The stock shown here is very good.
 P. M. R.

BATAVIA, N. Y.—As a result of a visit to Batavia of C. E. Laney, of the Park Commission of Rochester, in company with Nelson Bogue, nurseryman, the Board of Aldermen will have an offer from Mr. Bogue, that, if it will turn over the Court House park to him, he will park it and set it out with shrubs and flowers and care for it for three years without expense to the village. It is thought that the board will accept the generous offer.
WHITE PLAINS, N. Y.—H. L. Frost & Company of this place and Arlington, Mass., are "landscape foresters and entomologists" of 12 years' experience. They have a field force of 250 men, their work being to save trees from the ravages of insect pests and fungous diseases.

This week to arrange for the club annual outing, which is to take place some time in July. They are to report the arrangements at the next meeting, Thursday, May 11. St. PATRICK.

Toledo, O. Club Outings.

Our club has had two most enjoyable outings of late. A few weeks ago we took a trip to Clyde, O., to visit W. E. Hall's carnation plant. Mr. Hall grows mostly his own seedlings and knows how to grow them, too. We regretted very much that we did not see his red seedling at its best. It is a fine large flower, Beacon color, but shows now and then a white stripe. He is working to get out this white stripe and propagates from selected plants for future use. After he gets it just where he wants it, it will be disseminated. His fancy carnation, a seedling of Prosperity and one of his own seedlings, is a revelation; we have not seen anything better anywhere. White Perfection, White Enchantment and Lady Bountiful are grown, also Enchantment and Rose Pink Enchantment.

Another outing was enjoyed last Sunday when the lettuce plants of Searles Brothers and Miller Brothers were visited. Miller's place just covers one acre, all one connected house heated by hot water, with forced circulation. Mr. Miller is also a good grower of chrysanthemums and carnations.

Searles Brothers' new plant consists of 15 houses, each 15 feet wide by 750 feet long, the old place is about one-half this size. This entire plant is devoted to lettuce and cucumbers. Two crops of lettuce have been taken out of the new plant this season and on an average about two tons of lettuce are shipped every day. Grand Rapids Forcing is the only variety grown. At present the entire new plant is in cucumbers, which are just starting to bear. Two immense boilers are used for heating by hot water forced by a rotary pump.

Our club meeting of last Wednesday was held at the residence of Mr. Mills. Mrs. Mills invited the ladies of the members, whom she entertained while we had our business meeting. Our club is in a bad financial fix at present; the bank which held our money has decided to quit business, but we hope to get all back. SCH.

Cincinnati. Business Slow.

We are still trying to move the stock coming into this market, but it is certainly very much on the wrong side of the ledger. We are getting something for it, but to quote prices is a waste of energy. Last year at this time we were selling carnations at 3c., and roses were going well and fetching fair prices. At this time I am ashamed to state the prices both are being sold at.

Mrs. King, Portsmouth, O., was a caller on the 26th and reports doing a nice business.

Mr. Poague, who has charge of Huntsman & Company's store, is taking advantage of the cheap prices and is running special sales very successfully. E. G. G.

CLEVELAND, O. In the settlement of a seven year street car fight in Cleveland, to-day (April 28) three-cent fare has been established all over the city with universal transfers. The public was granted free car rides all over the city for a period of twenty-four hours to celebrate the event.

In recognition of the jollification the J. M. Gasser Company sent out a box of roses to all its city customers, with a card bearing the legend: "Free carfare; free roses, with the compliments of your florist."

PITTSFIELD, MASS. A gardener, who never had a vacation and who never earned more than \$1.50 a day was Michael O'Loughlin, who died here, April 22, at the age of ninety-one, leaving \$25,000. O'Loughlin had worked for Maplewood Institute, the late Governor Briggs, Edward Learned and others. Cheer up, brothers; all we lack is energy. V. L.]

WOOSTER, O. Wm. H. Love has gone to Bloomington, Ind., to the Curt Floral establishment.

Chicago. The Week's News.

The Illinois Heater and Manufacturing Company of Chicago has added to the awards in the Tribune garden competition. The firm will donate 25 Illinois self-watering flower boxes, for the same number of persons who do not qualify or obtain one of the cash prizes. Five boxes will be distributed among competitors in each of the five competitive divisions of the city. The flower boxes are becoming quite popular with florists, and are made to look very attractive in a number of the city stores.

Charles M. Balluff has now an interest in the business of the Eaton Flower Shop, the same dating from April 1.

Arbor Day, April 24, was very generally celebrated by school children in the parks and on school premises. The Carolina poplar was the most favored tree in the different districts.

The J. B. Deamud Company is receiving outside grown tulips of very fine quality.

C. W. McKellar reports an excellent demand for cattleyas, but a light supply. C. Mossie is the principal variety available.

Heim Brothers, Blue Island, have a grand crop of Bride and Bridesmaid roses in cut, and their carnation houses are still in excellent crop. Their establishment consists of about 80,000 square feet of glass. J. Foerster of the Flower Growers' Market handles the output.

A. H. Hews & Company, manufacturers of flower pots, Cambridge, Mass., have opened a branch office and warehouse at 456 North Branch street. M. F. Mooney is in charge.

Headquarters for gladioli appears to be at E. H. Hunt's, where daily shipments of many varieties are received.

The retail business of the late Alfred Hildred, 3023 Indiana avenue, has been acquired by H. S. Morton, whose location has hitherto been 96 East Thirty-first street. J. H. Pepper.

St. Louis. News Notes.

A terrific hailstorm passed over Belleville, Ill., Sunday, April 26. From telephone reports it was learned that very little damage, if any, was done to greenhouse glass, although fruit trees suffered greatly. The temperature fell twenty degrees.

The St. Louis Seed Company had a free seed day on Thursday of last week. The school children were each given six packages of seed, valued at 6c., when presenting the firm's advertisement cut from the daily paper; from reports several thousand children took advantage of this and stormed the place after 4 p. m. on that day. The crowd would have been larger, only for the bad weather, as a heavy rainstorm broke just at that hour.

C. A. Kuehn and J. J. Beneke won bowling prizes last week in the State bowling tournament, which took place in this city. They are members of the DeSoto team, and both were in especially good form.

Engelung Floral Company, R. J. Windler and Conrad Bergesterman, South Grand avenue florists, all report a heavy Easter business, especially in plants.

Frank M. Ellis, our former wholesaler, is still with us, and reports that he will leave here early this month and return to Panama, where he is running a successful banana plantation. His family for the present will remain in this city.

W. C. Smith & Company is doing a heavy business in garden trellises, tree boxes and other wire work for garden purposes.

The Florists' Club trustees—Messrs. Schenck, Smith and Boyer—will meet

Henry M. Robinson & Co.

HENRY A. DREER, 714 Chestnut St., Phila., Pa.

Los Angeles, Cal.

News Notes.

A. W. Ross, proprietor of the nursery, corner Twenty-ninth and Vermont, who has recently been married, is offering his stock of trees and plants for sale. As soon as he closes out his business here he will locate in San Diego, open a seed store, and put up a small range of houses, steam heated, for the purpose of growing decorative plants requiring a more humid atmosphere and uniform temperature than prevails on this coast.

Charles Winsel, seedsman and nurseryman, has moved his greenhouse and salesyard from Third and Crocker streets to the corner of Figueroa and Washington streets. The growth of business and the necessity of larger grounds to meet the requirements of his trade compelled a change of location. Here is another example of what inherent business ability, coupled with strict integrity in trade, will do for a man in the seed and tree business on this coast. Ten years ago he was working for wages as a landscape gardener; to-day his seed trade and retail nursery business are the equal of any in this town.

The arrival of the naval squadron at this port from the East, on its journey around the world, on the 18th inst., was the cause of the greatest demonstration on the part of the people of this great Southwest country that was ever known. For 40 miles, and this is no figure of speech but an actual fact, the coast was lined with people to witness the sixteen vessels of war sail by. The week following receptions for officers and men, automobile drives, with flowers galore, both indoors and outdoors, with a welcome by the societies of the different States to the men of the fleet from those States. The brilliant display of electric lights, the cordial greeting, the hearty welcome by the people of Los Angeles will not soon be forgotten by the officers and men of the invincible navy of these United States of America.

P. D. BARNHART.

FRESNO, CAL.—S. W. Marshall & Son have secured another large tract of land for nursery purposes. The proprietors are S. W. Marshall, who has been in the business 35 years, and his son, Will. S. Marshall.

THE GREAT IMPORTANCE OF EASY SET-UP IN THE "BURNHAM"

The cast iron nipple is milled with a slight slant from the front edges to the center so that the more you pull up the short tie rods, the tighter you set the nipples.

Short tie rod connections not only mean ease of set-up, but greatly simplify adding sections to enlarge your boiler.

You start with the rear section and connect up each section complete as you go along.

FIRST and foremost, your own men can set up the Burnham. The base bolts up in the easiest possible manner, and the grate connections are free from complications.

There are no headers—the nipples are cast iron, accurately milled.

But the short tie bolt connections of the sections are of the greatest importance to you.

With the long tie rod method of set-up, a tremendous amount of blocking and bracing work is necessary, and to tighten any single section you must tighten the entire boiler.

With our short tie bolt connections you set up and tighten a section at a time—each pair is entirely independent.

So much for its easy set-up—its economy will stand any comparison you want to make—any investigation you care to go to.

Hot water or steam. Burns hard or soft coal. Send for new boiler catalog.

W. M. BLOGS, Director.

Dear Mr. Partridge: May 20, 1907.
We have just received the Tringer Tobey heater, and within a few days we will install this and return the smaller one to the J. L. Mott Iron Works. We are turning over to our treasurer for payment, the balance due you, which amounts to \$20.00.

In concluding this transaction, I desire to express to you my hearty appreciation of the excellence of your work, and the honesty and courtesy of your method. We believe that we have one of the best greenhouses in the South, and any time that you need a good word, I hope you will not fail to call on us. Yours truly, W. M. BLOGS, Director.

Superior Merit

in all and every way over any and every other heating boiler is the claim we make and will prove for the

NEW DUNNING BOILER

Easiest to set up, connect, operate, regulate, clean and pay fuel bills for. Smallest fuel expense with largest heating results.

Specified for Thirty Years by U. S. Government for its Army Posts and Many P. O. Buildings.

BEST FOR YOUR GREENHOUSE

Large fire box with high crown sheet makes a perfect oxygen-and-coal-gas mixture. This burns at high temperature and flame travels twice the boiler length through three vertical channels—not tubes—which completely encircle inner and outer shells and give immense vertical heating surface. No efficient heat goes up smoke pipe—the water absorbs it all.

Made of Siemens-Martin wrought steel plates, hot riveted, not pushed, screwed or packed together. Tested by severest known test and guaranteed in every particular. Regulating devices most nearly self-operating to be had. The money, time and labor saver.

Send for Free Illustrated and Descriptive Catalogue and Price List. Will save you money.

Salem, Ore.

At a recent meeting of the Salem Board of Trade the following committee was appointed to take charge of the annual Salem cherry fair: F. W. Power, C. A. Park and H. S. Gile. The Salem cherry fair is one of the best horticultural displays of fine fruit that we have in the Northwest. It will be held about July 10 (date to be announced later). About thirty to forty cups will be offered as premiums and a large number of diplomas and other prizes. In connection with the cherries there are displays and premiums for general fruits, roses and sweet peas, and we desire as many nurserymen and florists present as possible. The Salem cherry fair being held just after the meeting of the Pacific Coast Association of Nurserymen affords Eastern nurserymen the chance to attend both without the expense of two trips to the Coast. We extend a special invitation to all nurserymen and florists, also horticulturists, to be present. Announcements of program and premiums will be made in a later issue.

F. W. Power,
 Chairman Cherry Fair Committee.

RICHMOND, IND. E. G. Hill has been invited by the city of Paris, France, to act as judge at the trial of roses in 1908, and also to send a collection of his new roses for the contest. The contest will take place in the great rose gardens laid out by M. Jules Gravenaux, owner of the world-renowned department store, Bon Marche.

BRIDGEPORT, CONN. The local press is loud in its praise of the floral work done by James Moran & Sons for some recent weddings.

Evans Improved Challenge

Roller-bearing, self-oiling device, automatic stop, solid link chain make the IMPROVED CHALLENGE the most perfect apparatus in the market.

Send for Catalogue

Lancaster, Pa.

In addition to this town being the "garden spot" of America, it is fast becoming the "florist's Mecca." A drive or a street car ride on any of the roads leading from the city through the county will take one past greenhouse establishments of all shapes and all sizes.

The principal output of these various establishments is carnations and sweet peas for commission house trade. Some grow pot plants for our local markets and some cater to the villages in which they are located.

The local city trade is well taken care of by Harry Schroyer (the Peter Reinberg of Lancaster), B. F. Barr & Company, F. Bachler, F. Suter and J. W. Fries not a big bunch of florists for a flower-loving city of this size, but a bunch of big florists.

THE TWO ESTIMATES

Have you ever placed two estimates before you both calling for the same kind of a greenhouse and compared each individual item on the list? You probably noticed that the two bids differed considerably as to the quantity, dimensions and patterns but was unable to tell what the differences amounted to in dollars and cents. You saw that one fellow wanted \$300 and the other one wanted \$150, but why one was lower you could not figure out and probably thought the extra \$150 was just for reputation. Now if two estimates on the same kind of greenhouse vary you can depend on it that there is a difference in the material some place, as cypress is used by everybody and the cost of the rough lumber does not vary much. It is up to you to find out what this difference is before you place the order with the lowest bidder. We make cypress greenhouse material as cheap as it can be made by anybody and we sell it on a very small margin of profit so if you buy of us you will get full value for your money. We guarantee it.

Our new catalog will be sent anywhere on request. Ask for one.

WEST SIDE AVENUE STATION (C. R. R. OF N. J.)
JERSEY CITY, N. J.

Have not been established 50 years, but long enough to convince the wide-awake Florist and Gardener that it is to his interest to place his work in thoroughly practical hands.

(150,000 sq. ft. glass erected in 1907 will substantiate this claim.)

And why not? My material is the best that can be secured. My iron frame construction has every modern feature that years of practical experience can embody.

And then there is the cost to be considered. Why not let us take up this important question now?

We make a specialty of Greenhouse stock for Commercial Growers of Flowers and Vegetables. Sash bars 32 feet long and over. Write for circulars and prices.

Seed Trade Report

AMERICAN SEED TRADE ASSOCIATION George S. Green, Chicago, Ill., president; M. H. Duryea, New York, first vice-president; F. W. Bolgiano, Washington, D. C., second vice-president; C. E. Kendel, Cleveland, O., secretary and treasurer; Leonard H. Vaughan, Chicago, assistant secretary.

FLORAL PARK, N. Y. Linnays Allen, who is now the leading man in the seed growing house of C. L. Allen, is visiting his customers throughout the country. At the present writing he is in the South, and reports a healthy state of business and a good demand for Long Island products.

SWISS IMPORTS.—Consul A. Leiberknecht of Zurich reports that the total value of seeds and plants imported into Switzerland during the year 1907 was \$4,980,700.

IMPORTS OF SEEDS, ETC.—April 28.—C. F. Meyer, 37 cases plants, four tubs laurel trees; J. Ter Kulle, two cases plants, 11 tubs laurel trees; Vaughan's Seed Store, 62 cases plants; P. M. Einsman, 12 tubs laurel trees; H. E. Darrow, 34 cases plants, six tubs plants; Kramer & Foster, two cases plants; Smith & Boltzental, three cases and 31 packages plants; McHutchison & Company, 47 cases plants, 138 tubs laurel trees; Vaughan's Seed Store, 90 cases plants, 214 tubs laurel trees; Hussa & Company, nine cases plants, 10 tubs laurel trees; Julius Roehrs Company, six cases plants, 12 tubs laurel trees; J. Dinn, Jr., three cases plants; C. B. Richard & Company, 32 cases plants, etc.; P. H. Petry Company, 16 tubs laurel trees, 28 cases plants; Maltus & Ware, 133 packages plants, etc.; T. C. Pollock & Company, 14 tubs bay trees; Knypser & Shields, 10 packages plants, etc. April 29.—Wadley & Smythe, 49 packages plants; Weber & Don, 20 bushels grass seed, April 30.—Wm. Smallwood & Company 43 packages plants, May 5.—Austin, Baldwin, one bundle live plants; H. E. Darrow, 38 cases plants; Vaughan's Seed Store, seven cases plants; Rooney & Spence, five tubs laurel trees; Wadley & Smythe, seven cases plants; J. Ter Kulle, 18 cases plants, 28 tubs laurel trees; Julius Roehrs Company, 18 tubs laurel trees, eight cases plants; C. B. Richards & Company, 11 cases plants; O. G. Hempstead & Son, 28 cases plants; G. W. Sheldon & Company, 29 packages plants, etc.; Maltus & Ware, 21 cases plants.

CONTROLLING INSECTS ON SEED BEDS. The growth of cabbage plants for late setting has been a very uncertain venture in parts of New York State for several years. Maggot-flies and flea-beetles have become so plentiful in cabbage sections that only small fractions of the seed sown give plants worth setting; so that many growers have had to import large numbers of plants from other States, with greatly increased expense and liability of introducing disease. A simple and, so far as tested, a feasible and cheap method of controlling insects on seed beds was tested, not originated, by the Geneva Station last year, and the details of the experiment are given in Bulletin No. 391. A small bed was covered with cheesecloth screening and the plants completely protected from maggots. From 1800 square feet of bed 50,000 sets were taken, while from a check plot intended to set 40 acres only plants enough for a little over 4 acres were secured. By taking off the cover for a week before setting, the plants were "hardened" so that there was no more wilting than with plants grown in the open air. The screening method is very expensive and is apparently more expensive than dry spraying or soaking of the soil with insecticides. Cabbage growers should secure the bulletin by sending to the Station for it.

AMERICAN GROWN SEEDS.—The large amount of our comparatively common seeds which is annually imported is astonishing. An effort is making by the Department of Agriculture to induce the growing of more seeds at home, reducing the necessity for sending money abroad and at the same time widening the field for American growers. It is true there are some seeds which we do not yet know how to grow in the best manner. Not long ago the best beet seeds were grown in Germany; now the United States produces nearly all the seed it requires, and better than the German seed. There has been recently a considerable demand for good seed of rape and hairy vetch seed for forage crop planting. This is high-priced seed and much of it has to be imported. Hereafter it has not been thought possible to grow good cauliflower seed in the United States and large amounts are imported from Germany; but a few years ago a section was discovered in the State of Wisconsin where excellent seed of this vegetable can be produced. It is the belief of the Department of Agriculture that the climate, soil and agricultural conditions generally of the United States are so varied and diversified that experiments in all directions under scientific methods will develop the fact that there is some section somewhere in the country which will be found suitable to the perfection of nearly all, if not all, the seeds for which such large sums of money are now sent abroad. —Market Growers' Journal.

SEED CROPS ON LONG ISLAND.—Contrary to early expectations the cabbage seed crop bids fair to be much above the average. Owing to the cold dry weather during the growing season, September and October last, the plants made a poor showing when put in the trenches in November, other than a hardy growth and vigorous constitution. When taken from the trenches in April there was scarcely an output that had not made a vigorous and healthy growth, the only exception that has come to the writer's notice being a field of four acres of Savoy, which was a total failure; not a plant was saved.

The weather thus far this season has been a delight to all the Brassicas, cool and moist; the growth has been marvelous, and the present indication is far more than an average crop—a condition devoutly to be hoped for, as stocks of the leading sorts, particularly Wakefields, are very low and the demand exceedingly heavy. The Mammoth Rock Red will be short, as the plants were small; this variety requires a longer period of growth than any other, which it did not get.

Siberian kale promises a good yield, many pieces far above the average. Scotch kale is not doing as well; the unfavorable weather last Autumn did not make plants strong enough to produce a good seed crop, consequently this crop will be short.

Brussels sprouts. At the present writing the plants selected for seed purposes are looking well, but the crop is one that cannot be depended upon until near the harvest. The conditions favorable for a crop of the vegetable seem antagonistic for a good seed crop; hence the uncertainty of predictions.

The ruta bagen seed crop is annually getting less on Long Island in consequence of the price. But few farmers can be induced to grow it, and all other crops pay them better. The little grown is looking remarkably well, and fully 50 per cent. above the average crop is anticipated.

Seed Trade Notes.

There is in all branches of the seed business has slackened very materially this past week, with the one exception of the over-the-counter small garden orders, which will continue to make the rest of the month, in connection with the vegetable and flowering plant sales, and a good part of June extremely busy.

The extreme scarcity of so many seeds this season, especially in the vegetable line, has, as I pointed out, obliged many planters to use the so-called odd varieties more than in many years. It must have come home very forcibly to all of us, how comparatively few varieties would be used if our seed stocks were always complete with those standard sorts of vegetable and flower seeds that in nineteen cases out of twenty are always called for. We have endless varieties of almost all things; but how few we really need. Take for instance beans; with a good stock of Valentine and Golden Wax, in the dwarf sorts, and a couple of good pole kinds, most customers would be satisfied. The same conditions exist with regard to everything we catalogue; our lists could all be reduced very much without any detriment whatever to our trade, and with great good to the simplification of our seed stocks, and consequent expense of handling the same. There is no time to consider such matters better than the present, while recent sales have made it so perfectly plain how comparatively few varieties of both vegetable and flower seeds are actually needed, as compared with the multitudinous lists custom has ordained that our seed books shall contain.

As regards the sales of Spring bulbs, many seedsmen have this past season been very much disappointed in the small quantities disposed of, as compared with previous years. Gladioli, tuberose, and other sorts have sold very slowly as a rule. The same condition of lagging sales would seem to have applied to most of the vegetable and flower seed novelties of the season. It seems to have been a year when the standard seeds have had more than usual consideration. V.

European Notes.

It was too cold to put pen to paper last week, and in addition to this the holiday season, with its much needed rest after the rush of the past four months, was a sufficient excuse for the absence of the European Seed Notes. Now there is very little of a cheering nature to record. Easter might easily have been mistaken for a very cold Christmas and up to the end of the present week things have been going from bad to worse. The cold, biting winds from Siberia, which enveloped Erfurt in snow early in Passion-week, traveled quickly in a westerly direction, and Northern France and the British Isles are experiencing a second Winter. Fortunately for us while the thermometer registers from 5 to 10 degrees Fahr. below freezing point nearly every night we have heavy falls of snow at the same time, so that our young seedlings of peas, radish, spinach, etc., are fairly well protected.

While the foregoing is not very cheering, the news which reaches us from the best growing districts day by day are even more discouraging. The work of transplanting is still going on in some of the later districts, but in many of the silos the roots have kept very badly (probably as the result of the cold rainy Autumn), and the previous estimate of a 50 per cent. loss is too favorable. Once again the word of caution regarding advance sales is fully justified.

Next to beet, radish is the most interesting subject to us just now. Owing to short crops and recent heavy sales the stock of varieties most in demand on your side is practically exhausted. The growers were only persuaded to accept contracts after much palaver and a substantial advance in price, and there is no doubt that if the present unfavorable conditions continue they will pay no great attention to their crops. This is not to be wondered at when we bear in mind the many losses they have sustained during the past three years.

For the later and stronger growing va-

rieties it is very easy for us to seek "fresh fields and pastures new," but the more delicate forcing varieties have been developed in a district where climate and soil are alike favorable, and if the culture be definitely discarded there, where generations of experience have been available, the outlook is most discouraging and perplexing. An advance of 25 per cent. in the contract prices might at any rate stave off the evil day, but one really good harvest would do far better.

The following item of news has an Old World flavor about it that may be of interest, especially to that prince of antiquarians, Captain Landreth: "In grateful remembrance of the Recorder's Warrant issued in 1637 for the apprehension of persons using the trade of gardening in contempt of the Company's Charters, the Master and Commonalty of the Gardener's Company have asked permission to send annually to the Lord Mayor of London a basket of Flowers and Vegetables. The Lord Mayor has fixed July 1 as the date of the first presentation." EUROPEAN SEEDS.

A RECORD TO BE PROUD OF

The Florists' Hall Association has paid 1,040 losses amounting to \$102,000.00 For particulars address

JOHN C. ESLER Saddle River N. J.

(86) Growing Roses a Third Year.—I have a house of Bride, Bridemaid, Richmond and Kaiserin Augusta Victoria roses; all have done well. I want to know whether I am safe in growing them the third year. All grafted stock. WANDERING JEW.

—If the stock is clean and healthy, we would not hesitate a moment about growing the roses for a third term. The tendency nowadays is toward large, long-stemmed flowers, and three-year-old plants, if grown carefully, are just the stock for producing that class of blooms.

(87) Raising Pansies from Cuttings. Is it practical to root pansy cuttings; if so, when and how should it be done? Ohio. E. S.

—Pansies can be propagated by division of root stools, by layering runner-like top growth and also by rooting short, sturdy shoots, taken from plants in the Spring or in September and October. A frame or, what is still better, a hotbed nearly spent but yet for a week or two affording a bit of bottom warmth for the cuttings, is the place to root them in. The frame is to be kept closed and shaded during sunny and especially windy days, but should be entirely open and the sashes laid off during the hours of calm, fine nights. It is a mode of propagation certain to succeed but recourse to which is but rarely had by florists who must ply their trade with the object of making it pay. And it does seem unlikely that propagation by cuttings could be made to pay, unless the stock plants are miracles in their way, their flowers of matchless size, beauty and substance, not equaled in point of excellence by any as grown by every practical florist annually from the finest strains of pansy seeds. In point of vigor and reliability for bedding purposes, pansies raised from seeds every year and treated as annuals surpass any propagated by division, layering or cuttings.

F. W. TIMME.

(88) Fronds of Nephrolepis Scottii Coming Malformed.—I send you a plant of N. Scottii on which many of the fronds are twisted. The plant does not seem to grow out of the trouble. What is the cause and remedy? New York. H. M.

—Malformed fronds on Nephrolepis Scottii have not infrequently appeared since this fern has been grown in quantity, and various opinions have been expressed by the growers as to the cause of the trouble. The most likely cause, however, is having too much water both overhead and at the root, before the plants are well-established. Another possible cause is indigestion due to too much strong feeding, for while these ferns will assimilate much manure after they are well rooted, yet it is possible to overfeed them. The plants will sometimes grow out of this condition, though not always, and if I were handling them I would trim out the worst fronds and hold them for a second growth, keeping them somewhat drier, though avoiding absolute drouth, and give plenty of ventilation.

W. H. TAPLIN.

ROBERT A. ELLIOTT, MORRISTOWN, N. J.

Dreer's Hardy Perennials

Largest assortment of desirable varieties. Plants of proper size to give best immediate results. For complete list of varieties see our current wholesale list.

Many planters not thoroughly familiar with this class of plants have an idea that nothing but a large, field-grown clump will give satisfactory returns for the season. This, as experience has taught us, is in most instances a mistake. A vigorous plant of proper size will, in nearly every case, give quicker and better returns than the best so-called "field clumps" that can be procured. It will be noticed that the majority of the stock offered in this list is described as being 3, 4 or 5 inch pots. This does not necessarily mean that the plants have been altogether pot-grown, but that they have been field-grown and dug and potted up during the Fall and early Winter months, and such stock can be planted even late in the Spring, with practically no loss, which in the case of clumps, is often quite serious.

Table listing various perennials and their prices per dozen and per 100. Includes Achillea, Anemone, Aster, Campanula, and many others.

Table listing perennials and their prices per dozen and per 100. Includes Hebe, Grandifolium, Primula, and others.

NURSERY DEPARTMENT.

Conducted by Joseph Mechan.

AMERICAN ASSOCIATION OF NURSERYMEN.

J. W. Hill, Des Moines, Ia., president; C. M. Hobbs, Bridgeport, Ind., vice-president; George C. Seager, Rochester, N. Y., secretary; C. L. Yates, Rochester, N. Y., treasurer.

Evergreens in Frames.

Those who have propagated evergreens from cuttings or seeds indoors during the Winter will be thinking of giving them some other position at this time. Such rooted cuttings or seedlings will be too small to set out to take their chance among general nursery stock, and the best place for them is some open frame, where they will get some attention and be more protected than when in a general nursery position. When set out in frames attention can be given them in the way of water, should they need any, which care will enable the plants to grow much faster than they would do without it. Then, too, when Winter comes it is practicable to place a few forest leaves over them to prevent the ground freezing too hard, which is a great advantage to them.

In very favorable seasons when rains are ample in Spring and Summer such young plants as are referred to have been known to do very well set out directly in nursery rows, but seasons of this nature are unreliable, and with dry seasons very many of such young plants die outright; so that in every way it pays to plant them in frames.

Grafting Outdoor Stock.

In the colder States the month of May brings around the season for grafting of outdoor stock. A great deal of attention has been given of late to raising the improved kinds of nuts, and the grafting of them—chestnuts, pecans, walnuts and the like—is now in order. Then there are the various weeping trees, all of which, with few exceptions, are raised by grafting. Teas' weeping mulberry, Catalpa Bungei, Camperdown elm, Kilmarnock willow, weeping ash, weeping mountain ash, weeping dogwood, the various drooping birches and the like, can all be increased by grafting, and many of them by budding in August.

As to the proper time to graft it is when the state of the stock shows its sap is active. Swelling buds show this. The cions, of course, have been cut some time in advance, and kept in a cold place, so that they are entirely dormant. In this condition grafting may go on even though the stocks are in leaf, but success is not so well assured then as it is when the stocks are still without leaf growth.

There is a difference of opinion as to the benefit or not of cutting away all growth of the stock, as soon as that of the cion is assured. When the growth on the stock is below the grafted part and in moderation only it is probably a help rather than a hindrance, adding strength to all parts, but no growth of any kind should be permitted to be on a level or above the cion. In Autumn, sometimes earlier, all growth but that of the cion may be cut away, depending on whether it appears to be robbing the cion or not. The more leaves a young tree carries the stronger it becomes, but leaves and wood growth must not be allowed at the expense of the well-doing of the grafted part.

After Treatment of House Azaleas.

Very often azaleas that have been used for house decorations are not at all desirable looking objects. Those who have them in charge are rarely florists, hence the ill-looking subjects the plants many times present. Often a branch has been broken here and there to add to other ill conditions they have had to endure. If the plant is of good shape it will need no pruning, otherwise it should be brought into shape by a good trimming, which these plants do not mind at all. In fact, an azalea may be pruned back to its leafless growth and be the better for it often, as it will break afresh from its old wood, which many other plants will not do.

If the pots the plants are in are of fair size there is no need to disturb the plants. In fact, azaleas do not desire large pots, and a size deemed too small, as plants go, will be found large enough for them. What they do like is a little food in the way of manure water at times when they are growing—not much of it; a light watering with it once a month is sufficient. As soon as warm weather comes in Spring azaleas should be set out of doors, the pots plunged to their rims, or deeper if desired. If deeper, nature will take care of the watering, and the plants do as well as if under any other conditions.

Should the plants not be nice specimens nor likely to be for a year or two, it is just as well to plant them out in the nursery ground, there to remain until they have again reached a stage of growth entitling them to be considered good plants for selling in pots.

Plants to remain for a year or more in nursery rows must be of the hardy kinds, which really embrace all common azaleas, excepting the Indian ones, represented by the old *Indica alba* and other well-known greenhouse

varieties. Even a few of these latter are hardy. *Indica alba*, for instance, is hardy about Philadelphia, except when in a bleak position.

Pruning Halesias.

Halesia tetraptera is flowering now, and a week later *H. diptera* will follow it. Both are Southern trees, but *H. tetraptera* will thrive farther North than *H. diptera*.

As usually seen, these trees are let grow at will, and they do not make handsome specimens, as a rule, being inclined to a straggling appearance. This can be remedied and handsome shrubs or trees made of them by pruning, and as soon as flowering is over is the time to do it. Prune them to get shape and to obtain young shoots for flowering purposes.

Whether to have them in tree shape or in shrub style is a matter that can be decided by pruning. It is usually easy to start the growth confined to one shoot, which will give the tree shape in time. If a shrub shape is preferred and there is but one shoot to the plant, cut back this shoot to within six inches of the ground. This should cause several shoots to appear; if it does not, pinch off the ends of what growth is made two or three times during its Summer growth.

When halesias are shapely specimens they are extremely pretty when in flower. They bloom when but 4 feet high, although both species are really trees when in soil that suits them.

Elderberries as Ornamental Shrubs.

The elderberry, as seen growing wild, has not many attractions, often owing to its being in surroundings which are in themselves unattractive. This applies to our common wild one, *Sambucus canadensis*. But this one can be used to advantage when set along the banks of a lake or pond and given space to grow and a little attention in the way of shapening. Its clusters of white flowers and its dark colored berries later are interesting.

There is a variety of this elder differing from the type in having berries of a dark red color. The flat clusters of these berries are attractive, ripening in Autumn, when those of the common one do. It is sometimes called red-berried elder, but this common name is properly applied to two of our native species, the *S. pubens* and *S. racemosa*. These are quite unlike the common wild *S. canadensis*. The flowers come very early in Spring; they are in small racemes, not in flat heads, as those of *S. canadensis* are, and they seem hardly out of flower before the clusters of red berries appear. They look so uncommon that the name red-berried elder is well applied.

The *Sambucus niger* is the English, or European elder. It is a tree, almost, when age has been attained. Excepting in its heavier growth, there is no striking difference between it and our *S. canadensis*.

There are several forms of the common elder, *S. canadensis*, a cut-leaved, a golden-leaved and a variegated-leaved among them. These all have their uses. The

Star Bed of Coleus, etc., at Pelham, Philadelphia, Pa.

Flowering Cherries.

In early Spring few flowering trees give greater pleasure than the several kinds of flowering cherries. The large trees of the flowering cherry seen in collections are all of the good old Chinese double white. For years it was the only one in collections, but in these days there is the Japanese one, known as Sieboldi rosea plena, and within a few years past another one from Japan, known as Veitchii, has been introduced; but in a general way it resembles Sieboldi very much. The Sieboldi is preferred in collections—leaving aside just now consideration of the Veitchii—because of its beautiful rosy pink flowers. This rosy pink color is evident in the bud and in the flowers when in their prime, but as they commence to decline they change to a white color. They are very double, making a most handsome display; and when the trees are of good size, no handsomer sight is to be seen. There are very few trees bearing blossoms of like color at any time of the year.

So far as young specimens enable one to decide, Veitchii appears to differ but little from Sieboldi—not enough to be able to describe, at any rate; but a difference may exist which may disclose itself later on.

This is the time to set out stocks of the Mazzard cherry for the purpose of budding on these flowering cherries in August or September. Stocks set out now, of average size, will make a girth quite large enough. If Mazzard stocks are unobtainable the Mahaleb will answer, but the growth of the Mazzard is stronger than that of the other, making a larger tree.

golden when in groups at a distance looks well, but the foliage is too coarse for many positions.

Star Bed of Coleus.

Our illustration shows a beautiful bed of plants, displayed on the lawn of a residence fronting one of the main drives of Pelham, Philadelphia, in the Summer of 1907. It was on a slight elevation but sloping toward the avenue, and at the junction of two wide sweeping avenues of Pelham, so that its display was enjoyed by all, both pedestrians and those who were driving.

As will be noticed, not many varieties of plants were used, yet what a pretty combination they present! Outside is a row of the common yellow-leaved coleus, next a coleus of the Victoria type, with its pretty colors, then comes the well-known *Froese* (*Achyranthes Lindenii*), invaluable because of its blood-red leaves, and last of all, as a center plant, is another indispensable subject, *Dracaena indivisa*.

Owing to the late Spring the plants were not set out very early, and this may account for their beauty so late in Autumn, for November had come before the beauty of the bed had entirely disappeared.

The large trees in the background were there long before the dwelling was built, being on what was part of the estate of the late George W. Carpenter, some being of natural growth, others set out in Mr. Carpenter's time. But how nicely the house appears ensconced in the midst of them; and the whole arrangement of the ground is to be admired.

JOSEPH MECHAN.

60,000 GRAFTED ROSES

Chatenay, Killarney, Richmond, Liberty, La France, in rose pots, \$15.00 per 100; 3 1/2 inch pots, \$18.00 per 100.

Indianapolis.

Current Items. All landscape work, also garden- ing, has been held in abeyance for some time by adverse weather conditions. This also holds the seed business in check. The various seed houses are well pre- pared for an annual trade, but so far little has materialized. Several large eastern firms have also canvassed this section thoroughly and caused heavy inroads on the local customs. Mail at Martinsville, Ind., April 26, caused much damage to the greenhouses there. No insurance is carried by the firm, which is much sympathized with by the local craft who have just recovered from the same experience. Frank Lichtenberg, manager for Mr. Wolfskill, the florist at Los Angeles, Cal., is visiting here. Mr. Licht- enberg is to continue his way East to New York in the interests of his firm. The State Florists' Association of In- diana will hold its monthly meeting at the State House, May 5. The Smith & Young Company is pre- paring to add another large house to its Cumberland establishment. Tomlinson Hall market reports a slow business the past week. Little other than bedding stock is offered, and not much wholesale business is maintained at this time. The many friends of E. G. Hill in this city are pleased to learn that he has been invited to act as judge at the French rose exhibition this Summer. Visitor: W. Hagemann, New York. I. B.

THE WEEK'S WORK

Timme's Timely Teachings.

Crotons.

Among hot-house subjects now more extensively made use of by the resourceful grower than in former days are crotons. Hushed from their quarters of idle repose into the most varied of everyday service, they have proved themselves the all-around useful plants of which local florists never seem to be oversupplied.

Poinsettias.

It is now time again to turn our thoughts to poinsettias, bearing in mind their importance at the Winter holidays and the necessity of providing amply in this particular line of stock.

Asters.

The planting out of asters from frames, flats, seed boxes and pots is now what keeps a great number of busy people in healthful motion.

Prices Advertised in these Columns are for THE TRADE ONLY—

When Writing Please Mention THE FLORISTS' EXCHANGE.

closer intimacy with commission men and the exactions of the wholesale market. But when it is thought that by an unusually early start of the seeds and subsequent culture under glass they can beat their non-professional competitors at any great length, they will find themselves disappointed. Asters, unlike sweet peas, mignonette, snapdragons and a host of other garden annuals, are decidedly nothing but an outdoor crop, as are dahlias, cosmos, Shasta daisies, etc. One can start the seeds months ahead of time, can plant and flower asters under glass, but nothing is gained thereby but needless extra labor and cost of production. The flowers of most varieties will not come earlier, nor will they be as good as those from plants in the field, started from seeds sown much later; i. e., at the proper time—March or April. A few early or mid-season sorts, grown in greenhouse benches, will indeed flower a few days sooner than those of the same varieties, planted out of doors, but the crop will be meager, the blooms poor, often unsalable—it is not a paying proposition. As to the outlook for aster growers this season, why, it is as it has been every Spring, in recent years; millions of asters will be planted, thousands will produce salable flowers, hundreds will be sold at a fair price. The finest of blooms, picked from a field stocked with the finest of asters, afforded the best of cultivation by the most careful of growers, will, as usual, win out in the race.

Reminders.

In throwing out violets, nicely rooted side runners, short and healthy, potted up and placed in shaded cold frames, will, even as late as this, grow into better stock under subsequent frame or field culture by next Fall than will divided old stools.

For the rooting of coleus it is by no means too late. Stock plants harboring mealy bug should be dispatched after having furnished a last crop of clean, bright head cuttings.

Shasta daisies needing replanting can now more equally be divided into pieces of fair-sized crown growth, while this is well advanced, than at any time before or after this date. It also may be used as cuttings, which now root readily.

Tuberous grown in pots and the richest of compost and constantly kept under glass, throw finer spikes of flowers than bulbs planted or transferred and flowered in the open.

Tufted pansies are worthy of a trial everywhere. I first saw them in Great Britain, have plants of them now and have found them to be faster growing, more compact and floriferous bushes than any other pansies I have ever raised, though the flowers are smaller. Viola cornuta can yet be sown, and, as I was made to understand its nature, will bloom this year and again the next season, it being a hardy perennial of the most proper behavior.

Lawns disfigured and overrun by moss and weeds should, after the first mowing, be thoroughly combed and scratched with a sharp-toothed steel rake. Much of the moss and many of the weeds will thus be torn up, can easier be got at in pulling, and rooted runners will have lost their foothold, giving the grass a chance to spread and take their place. After the lawn is thus cleared it should be rolled, but not right after a rain.

For the ailments of some plants at this season there is no better prescription than the combination of fire heat and open ventilators. It does not follow that, because a house is kept cool, its air is also kept pure.

SPIREA Gladstone, in 6, 7 and 8 in. pots, fine, very large plants at \$6.00 per doz. Extra large plants in 8 in. pots, \$9.00 per doz.
ARAUCARIA Excelsa, 5, 5½ and 6 in. pots, 75c., \$1.00 and \$1.50 each.

ANTON SCHULTHEIS, 316 19th St., College Point, L. I., N.Y.

NEW CANNAS 1908

ROSEA GIGANTEA
 This beautiful variety has extra large flowers which are borne in such abundance that the mass of color on each plant is amazing. Single petals are 2½ inches across; color, a deep rich rose, almost a coral carmine. Plants make a vigorous growth, producing unusually fine clumps of green foliage. Height, 4 feet. (A great favorite with visitors to our trial grounds.) Strong plants, \$2.00 each, prepaid; \$18.00 per doz. by express, not prepaid.
GLADIO=FLORA
 Remarkable for the unusual shape of the flowers, which look like large Gladiolus. Petals are not long, but short and rounded and so wide they overlap each other, thus giving a very attractive appearance to the flowers. Color is crimson, changing to carmine rose with an uneven edge of gold to each petal. Height, 3¼ feet. Price, strong plants, \$2.00 each, prepaid; \$18.00 per doz., by express, not prepaid.
CANNA METEOR
 Meteor is a vigorous grower with healthy green foliage. It is highly valued because of its magnificent flowers, fully four inches across, and abundance of bloom. Color is a deep crimson, very rich; each plant usually throws up five to six trusses of buds which continue blooming luxuriantly all Summer through. Price, plants or dormant roots, 75c. each, prepaid; \$6.00 per doz., by express, not prepaid.

NEW CANNAS OF SPECIAL MERIT

WILLIAM SAUNDERS
 (1907) The flowers are large, of splendid form and are borne very freely in immense clusters. The color is a deep rich shining scarlet lightly dappled with crimson. Foliage is a rich bronze. Height, 3¼ to 4 feet. We believe that Wm. Saunders is decidedly the most perfect canna of this type that has been introduced. Those who tried Wm. Saunders in 1907 say it cannot be excelled. We offer plants only; 60c. each, prepaid; \$5.00 per doz., \$35.00 per 100, by express, not prepaid.
 60 other Varieties. Send for list and prices

PUBLICATIONS RECEIVED.

PLANT BREEDING FOR FARMERS. By Professor H. J.
Webber; Bulletin 251 Cornell University, Agricultural
Experiment Station of the College of Agriculture (Plant
Biology), Ithaca, N. Y. While primarily intended for
the information of farmers, the subject matter contained
in this bulletin will be found of greatest interest to all
engaged in the breeding of plants. Dr. Webber goes
very thoroughly into the subject of plant breeding, ad-
vancing the statement that the work should "become a
farmer's fad * * * No farmer is so poor but that he
can have his breeding patch of corn, wheat or potatoes.
Indeed, if they but knew it, they can ill afford not to
have such a breeding patch to furnish seed for their
own planting."

Relative to "The Forcing of Variations" in plant life
the subjoined information is furnished:

"Little is known as yet as to how far we can go in
forcing the variations of various types, other than through
hybridization of different strains, varieties and species.
The evidence now at command indicates that plants be-
come more variable as they are highly fed and are
manipulated in various artificial ways, such as budding,
grafting and vegetative propagation in general. A change
of environment may cause apparently stable races to
break up and vary considerably, especially when such
races are of hybrid origin or are highly bred sorts. A
radical change of environment may, therefore, in some
cases lead a plant to break up and produce certain vari-
ations that we desire.

"The recent investigations of Dr. MacDougal indicate
that we may be able to induce or stimulate a plant to
produce mutations or sports through the injection into
it at certain periods of chemical salts. This, however,
is at present a field of experimentation for the scientist
rather than for the practical breeder."

The report of the proceedings of the twenty-third
annual convention of the S. A. F. O. H., held at
Philadelphia last year, has been issued by Secretary
Willis N. Rudd. It is, as usual, a most interesting
document and the careful manner in which it has
been compiled reflects the greatest credit on Mr.
Rudd. In addition to the work of the convention
proper, the publication contains the bowling con-
tests, report of the Florists' Hall Association of
America, list of life and annual members of the
society, the former now numbering 455 and the
latter 719.

The Plant Originator's Portion.

In these days we read a great deal about the
pleasure and profit that proceed from the work of
obtaining new varieties of fruits and flowers; and
when we hear of the immense sums reported to have
passed between some originators and the purchasers
of their novelties, it gives us the impression that
after all there must be "money in it." This, how-
ever, is the roseate hue shed on the undertaking by
these often exaggerated stories; but evidence is not
wanting to prove that the life of the originator of
new plants and fruits has also its dark side, and
that, like literature, the work can be carried on
more comfortably and profitably when it is merely
"a staff, rather than a crutch," in the existence of
the individual pursuing it.

Recently there passed away a man who perhaps
did more for the improvement of the grape than
any other one man in America, in the person of
Jacob Moore, who originated such well known vari-
eties as the Diamond, Brighton and others. Here is
the brief but pitiful story of his career as told by the
Rural New Yorker in a late issue:

"A few weeks ago a man died in poverty and sorrow.
It was said of him that he had neither wife, children nor
permanent home—his life having been given to ideals
which while enriching others left him in poverty. Jacob
Moore spent his life in developing new fruits and in hor-
ticultural experiments. Left with a competent fortune
he spent it all, as well as the earnings of a lifetime, in
developing and testing new fruits. Such work came to
be a passion with him, and without business instinct he
saw the material fruits of his toil go to others. At the
age of 72 he was left with scarcely enough revenue to
keep body and soul together, while his work has added
millions to the general wealth and the private fortunes of
more business-like men. Like E. W. Bull, who gave the
Concord grape to the world, Jacob Moore was forced to
spend his last years keenly feeling the injustice of con-
ditions which may send the inventor of a new broom to a
palace and the originator of a new fruit to the poor-
house. Jacob Moore deserves a monument over his
grave, but he should have had a home and comforts be-
fore his grave was made."

Such a fate as is here portrayed is sorrowful
indeed to contemplate, in the case of a man who
was undoubtedly a benefactor of humanity; and it is
a sad commentary on his fellow horticulturists, espe-
cially those who profited most by his productions,
that such an unfortunate and pitiful end should
have been his. Doubtless conscious of his innate
lack of the business instinct, Mr. Moore often pled,
through the public prints, for the institution of some
sort of protective property right in his productions
to the originator of new plants, whereby he might
reap an adequate reward from the results of his
painstaking labors, but without avail. No patent
right can be secured on anything in which Nature
is the creative force, although guided by the hand,
skill and brain of man. Is it any wonder, then,
that men of the caliber and character of Jacob Moore
should end their days in poverty?

We do not believe there will be found one man
or firm engaged in the origination and introduction
of horticultural novelties who will admit that any
great amount of money has been made as a result
of their endeavors along that particular line. In
fact, one large introducer of new carnations recently
withdrew from the dissemination of his novelties,
owing to the profitlessness of the undertaking. It is,
therefore, greatly to the credit of those who, under
such unsatisfying conditions as a general rule, con-
tinue to enrich our collections with new fruits, flow-
ers, and vegetables; their endeavor being more
largely a labor of love than for monetary gain, which,
for the most part, is denied them. And when one
considers these conditions, the venal practice of rob-
bing the originator of the credit that is his, by
changing the original names of his productions, be-
comes all the more flagrant.

The fate of Jacob Moore and others of character-
istics similar to his is not without its lesson. It
demonstrates how necessary is the business in-
stinct, combined with the ability to produce new
things in the horticultural line, to make the work
even a partial paying proposition; that it is unwise
to permit enthusiasm to dominate imperative self-
interest, that a strenuous effort should be made to
enforce an arrangement whereby some continuous
return, in the way of a "royalty," should be forth-
coming to the originator for a specified number of
years, failing the granting by Government of patent
rights on new and beneficial creations in plant life.

Mr. Moore's sad end would also seem to point to
the fact that, in order to prevent a recurrence of
undeserved neglect, horticulturists should see to it
that benefactors of his class, when their condition is
made public, should not be allowed to die in penury.
This for the credit of the great class of generous-
hearted men, of which the deceased was a brilliant
example. A monument over his grave, setting forth
his worth and work, can nothing atone for the suf-
ferings which "age and want, that ill-matched pair,"
brought about in the latter years of one whose life
work was fraught with noble and beneficent deeds.

National Flower Show Committee.

About forty members attended the meeting of the Com-
mittee of Fifty in the Art Institute, Chicago, March 23.
Chairman W. F. Kasting presided and reports showing
that great interest prevails in the show and rapid pro-
gress is being made in preparing for it, were made by
W. N. Rudd, chairman of the premiums committee; E. G.
Hill, chairman of the foreign exhibits committee; Otto
Koenig, chairman of the special features committee;
Philip Breitmeyer, chairman of the American exhibits
committee; and J. C. Vaughan, chairman of the local
management committee. A report from the treasurer
showed that a large number of the guarantors had paid
a first assessment of 20 per cent. on their subscriptions.
Chairman Kasting appointed Albert T. Hey of Spring-
field, Ill., a member of the committee in place of the
late P. J. Hauswirth.

The secretary reported that 1,500 preliminary premium
lists had been mailed, and more were on hand and ready
to be sent to all who addressed a request to Room 1411,
First National Bank Building, Chicago.

The American Carnation Society, the American Rose
Society, the Chrysanthemum Society of America and the
Horticultural Society of Chicago have offered their med-
als liberally as special prizes. W. N. Rudd, chairman
of the premium committee, reported that \$2,336 in spe-
cial premiums has been offered by various private persons
and firms, together with about \$800 in medals and cups.
The premium list offers a total of \$11,023 in prizes.

Committees have been appointed by the various chair-
men as follows:

Executive and Finance—W. F. Kasting, chairman;
Philip Breitmeyer, E. G. Hill, W. N. Rudd, J. C.
Vaughan, Otto Koenig, August Poehlmann, J. A. Valen-
tine.

American Exhibits—Philip Breitmeyer, chairman;
Frank H. Traendly, George Asmus, S. S. Skidelsky, El-
mer D. Smith, Robert Craig.

Special Features—Otto Koenig, chairman; Theodore
Wirth, Leonard Kill, S. S. Skidelsky, Harry Papworth,
J. F. Sullivan, W. L. Rock, A. J. Guttman, John Ber-
termann.

Auditing—J. A. Valentine, chairman; E. B. George,
Roy F. Wilcox.

Local Management—J. C. Vaughan, chairman; Au-
gust Poehlmann, J. B. Deamund, W. N. Rudd, C. Cropp,
Elmer D. Smith, J. E. Hauswirth.

Exhibits, Foreign—E. G. Hill, chairman, J. D. Eisele,
Carl Cropp, E. B. George.

At a meeting of the executive committee held the fol-
lowing day Mr. Kasting appointed George Asmus chair-
man of the publicity committee. James H. Burdett was
made permanent secretary and newspaper representative
of the committee. The question of manager was dis-
cussed and the local management committee was author-
ized to engage one.

It was determined, after a lengthy discussion, to give
visiting florists, not members of the S. A. F., in good
standing, the privilege of purchasing a season ticket to
the National Flower Show for \$1. Several amendments
to the rules were proposed to the premium committee, the
most important being that in all classes where it is
deemed permissible, an entry fee of \$1 be exacted from
each exhibitor. J. H. BURDETT, Secretary.

Richard Vincent, Jr., Abroad.

Richard Vincent, Jr., White Marsh, Md., who is at
present on a tour of the continental nurseries and plant
establishments in company with a delegation of British
and French horticulturists, writing from Leiden, Hol-
land, on April 23, says that he is having an enjoyable
time. At a dinner in Haarlem, on April 22, about 200 sat
down. The decorations of the dining room were excel-
lent. Mr. Vincent adds: "The Spring here has been
so cold that the tulips are not showing at their best in
bloom; but the fields of hyacinths are grand, a splendid
sight to see, and a great education to anyone interested
in intensive cultivation of the soil. We are among friends,
even though far away from home."

On April 21 the itinerary includes a visit to the nur-
series of Louis Van Houtte père; the establishments at
Lochristy of Messrs. C. Vuylsteke, J. De Puyssleyn and
Jean Bracke; after which the party will leave for Ghent.
Mr. Vincent visited the Ghent Quinquennial Exhibi-
tion on April 27 and writes regarding it as follows:

"The Quinquennial Exhibition at Ghent beats anything
that I before have had the pleasure of seeing. I have
heard of it and read of it, but one has to see it to take
in the vastness of the exhibit. The immense display
of azaleas and rhododendrons was simply gorgeous;
words fail to tell of their wondrous beauty, the size of
the plants and their masses of bloom. These alone
formed a show, but when combined with almost every-
thing else, from immense palms, acacias, stove and green-
house plants, down to the daisy and other Spring flow-
ering plants the effect beggars description. Outside the
large buildings were fine lay and evergreen trees, plants
and shrubs of all descriptions, all of good shape and

May 9, 1908

excellent quality, showing the great ability of the nurserymen and florists of Belgium, France, Germany, England, and other countries.

"The orchid exhibition in all its different branches was one of the great attractions, said by some of the men present to be one of the most valuable and the greatest ever shown, as Ghent claims to have one of the largest growers of orchids.

"Our party leaves to-morrow evening for Brussels. We will be in Paris last of this week.

"I wish that you had some one here to write up this show properly, as I am satisfied it would be an incentive for our people to go and do likewise."

James B. Tully.

James B. Tully, florist, aged 68 years, died May 1, at his home, 47 Spring Forest avenue, Binghamton, N. Y., after an illness of several months. Mr. Tully was born in Dublin, Ireland, and had lived in Binghamton for 31 years. He was a member of Binghamton Council No. 206, Knights of Columbus. He is survived by his widow and one daughter, Mrs. Thomas J. Diamond of Kingston.

Mrs. Charles Hurn.

Mrs. Charles Hurn, florist, after a short illness died at her residence on Bath road, Newport, R. I., on the 26th ultimo. Mrs. Hurn was a daughter of John Fadden, a florist and landscape gardener, who was among the first to open a flower store on Bellevue avenue, Newport, which he did in 1868 and which he conducted for ten years when failing health compelled him to retire, the work then being taken up by Miss Sophie Fadden, the subject of this sketch, in May, 1878, and carried on successfully by her until 1906, when she retired. For many years the deceased lady enjoyed a large share of the better class of trade, but of late years, owing to so much competition, her business somewhat fell off. She was of a bright, sunny disposition, and quite popular generally. Besides her husband, who was formerly in charge of the estate of the Hon. Perry Belmont, and is now in charge as superintendent of an estate at Elberon, N. J., the deceased leaves one sister, and one brother, Fredrick W. Fadden, who is a florist in New York. The funeral took place from her late residence on Wednesday, April 29. Rev. Emery H. Porter, D. D., of Emanuel Episcopal Church conducted the service. There were many beautiful floral tributes. MacL.

Charles Smith.

Charles Smith, florist, Woodside, L. I., died on Thursday, April 30, 1908, after a brief illness of pneumonia.

Mr. Smith was born on June 5, 1846, in the Clerkewell district of London, England. He learned the profession of a gardener, and followed it on several private estates in his native country. Coming to the United States in 1869 he secured employment as gardener with Mr. Bragaw at Woodside, Long Island. In 1874 he entered the business of florist at Dutch Kills, L. I., in partnership with W. Amos, and five years later they acquired property in Woodside. In 1882 the partnership was dissolved by mutual consent, the property being equally divided between the two partners, each conducting a growing establishment.

Mr. Smith devoted most of his attention to the cultivation of cut flowers for the New York market, selling his own stock at Thirty-fourth street in the early days, and, later, at the Cut Flower Exchange, of which organization he was a member from its inception. Two years ago he established another plant at Bound Brook, N. J.

He leaves a widow, three sons and three daughters. The boys assisted him in the business; one daughter is married to Gus. Schrader, florist, Elmhurst, N. Y., another to Theo. F. Ehrhardt, florist, Woodside, L. I., the youngest living at home.

The funeral was held at Bound Brook, N. J., on Sunday, May 3, and was largely attended by friends and associates by whom Mr. Smith was held in highest esteem.

THE ALASKA-YUKON-PACIFIC Exposition will be held at Seattle, Wash., from June 1 to October 15, 1909. An invitation has been extended to the American Association of Nurserymen to hold its 1909 convention at the exposition.

The Treatment of Damping-Off in Coniferous Seedlings.

Experiments have been carried on by the writer for several years in testing the effect of various chemicals upon the damping-off diseases of tender coniferous seedlings. These troubles are great obstacles to the successful production of such seedlings in large numbers for use in replanting waste or unoccupied land. They are caused by a number of different fungi which are being studied and will shortly be described.

The results of the first experiments, which were carried on entirely in the greenhouse, were taken as indications of what might be expected in actual nursery practice. It was felt, however, that the work should be extended to field conditions, and upon testing the preliminary results there it was found that they could be taken only as very meager and insufficient indications of the results to be obtained in the field.

During the season of 1907, field experiments were

The Late Edwin Hoyt.
(See Obituary, p. 581, April 25 issue.)

conducted in several nurseries of the New York Forest, Fish and Game Commission (one of which is operated in co-operation with the Forest Service of the United States Department of Agriculture) and of the Vermont State Forestry Commission, located, respectively, at Saranac Inn, N. Y., and Burlington, Vt. These experiments yielded very interesting results, but because of their preliminary nature it is felt that without further very rigid tests along similar lines they can not be accepted as furnishing conclusive proof of the comparative value of the chemicals used.

The great interest centering about these diseases, however, makes of value every scrap of practical information concerning methods of prevention. Until conclusive results are obtained the present ones may therefore prove useful to nurserymen, but they should be accepted with the distinct understanding that they are preliminary and are subject to later modification.

The tests here outlined are being continued on a more extensive scale, and it is hoped that the present season's work will give such results that there can be no doubt as to the conclusions to be drawn from them.

Procedure in Experiments.

The plots used were located in seed beds 12 feet long and 4 feet wide, each bed being divided into three equal parts 4 feet square. The chemicals were used in line powders or in solutions, according to their original form and nature. The solutions were applied with an ordinary sprinkling can, while the powders were sifted on the beds with a very simple form of duster having a perforated bottom, through which the powder was shaken. The solutions were applied to the soil before the seeds were sown, and then again about five days after the seedlings had come up. The powders were applied to the beds only after the seedlings had been up for three or four days. They were applied in very light coatings, which were renewed promptly after each rain. This renewal is not necessary except for a period of about two weeks, beginning three or four days after germination, when the seedlings are most susceptible to the attacks of the damping-off fungi.

Powders Used.

Upon the application of a mixture of 100 parts of powdered sulphur and 100 parts of powdered lime to the soil before sowing the seed, there was no definite result because of the absence of the disease in the experimental plots. This was also true of a solution of potassium permanganate, mixed at the rate of 1 gram of chemical to 1 gallon of water and similarly applied.

Formalin, Commercial 40 per cent, formalin, used at the rate of 1 ounce to 3 gallons of water, when applied to the soil before sowing and not afterward repeated, seemed to have no effect whatever upon the disease. The check plot, indeed, was much better, as were all of the other plots, both treated and untreated, located in that section of the nursery. When applied as stated and repeated after the seedlings had come up, the results were poor. It is now believed that formalin is of little value with the damping-off diseases of coniferous seedlings unless supplemented after the germination of the seed with some other efficient chemical. The results were disappointing when compared with those obtained with some of the other chemicals.

Sulphuric acid. The best results were obtained with weak solutions of sulphuric acid. A solution mixed at the rate of 1 ounce of acid to 1 gallon of water was applied to the soil several days before sowing the seed, until it was thoroughly drenched, and the treatment was repeated about a week after the seedlings came up. The treated plot was in excellent condition in December; there was a very good stand of fine, healthy seedlings and the soil was entirely free from algae and moss. The check plot, on the other hand, had practically no seedlings left, and the soil was green with algae and moss.

This solution of sulphuric acid was applied to young seedlings of a number of different species, and but one showed any ill effects. This was Norway spruce (*Picea excelsa*). It is not advisable to use an acid solution as strong as this upon the plants. Kramer has shown that a solution of sulphuric acid at the rate of 1 to 500 is as strong as should generally be used upon plant tissues, and this is recommended rather than the much stronger one used in these experiments. For soil treatment the stronger solution will probably prove preferable.—Perley Spaulding, Sentinelle Assistant, Laboratory of Forest Pathology, in Circular No. 3, Bureau of Plant Industry, Department of Agriculture, Washington, D. C.

Solutions Used.

Potassium sulphid and permanganate. A solution of potassium sulphid, made at the rate of 1 ounce of dry chemical to 1 gallon of water and applied to the soil before sowing the seed, gave no definite results because of the absence of the disease in the experimental plots. This was also true of a solution of potassium permanganate, mixed at the rate of 1 gram of chemical to 1 gallon of water and similarly applied.

Copper sulphate and lime. Powdered sulphate of copper was mixed with powdered lime, at the rate of 1 pound of the former to 10 pounds of the latter, in the following way: Fresh stone lime was slaked with as little water as would keep the slaking in progress. In this way slaked lime was obtained in the form of fine powder. This was screened and very thoroughly mixed with the powdered copper sulphate, and was then ready to be used. Attention is called to the need of thoroughly mixing the two ingredients, a disastrous result is likely to ensue if the copper sulphate is not properly diluted with the lime.

This mixture was used very freely, after the seedlings had come up. Absolutely no injurious results could be noted, even when the applications were made early in the morning while the seedlings were still wet with dew so that the powder stuck to them. It may be said that the better time to apply the powders and also the solutions is late in the afternoon. The powders will then adhere very slightly to the plantlets and practically all of the powder will fall on the soil, where it is wanted.

This copper and lime mixture was used upon the following species: *Pinus sylvestris*, *P. ponderosa*, *P. strobus*, *P. resinosa*, *Thuja Rubens*, *P. Nordstr* and *Pseudotsuga taxifolia*. Very good results were obtained in checking the damping-off with it, and it is believed to be one of the mixtures tested which may prove of value commercially.

Notes from London.

FERNS.—Messrs. H. B. May & Sons recently gained an award of merit for *Cyrtium fabianum* Mayii, a compact growing variety with broad, deeply cut pinules and the terminal ones heavily crested. When recently calling at their nurseries I noted a fine batch of seedlings from *Scelopendrium crispum*; it is very rarely that this fern produces spores. The seedlings showed considerable variations, and when more fully developed some handsome varieties may be found among them. Other hardy ferns now receive special attention and among the thousands of seedlings we may expect some good things.

THE PETAL BOX. Little boxes filled with the petals of poppies, violets, roses or lavender, which have been dried, pressed, and treated with the oil of the flower from which they came, are to suit the vinaigrette and the scent bottle with fashionable women. The petal boxes are supplied in gold, silver or tortoiseshell, and are cunningly fitted into the handle of an umbrella, the stick of a fan, or even on a bracelet.—Gardening World, London.

AMONG THE GROWERS

A. N. Pierson, Cromwell, Conn.

With the passing of Easter the regular routine of the business has been resumed at A. N. Pierson's greenhouse at Cromwell, Conn., which means that preparations are on foot for planting the rose, carnation and chrysanthemum houses. Three or four houses of special plants for Memorial Day are well under way, which after June 1 will be filled with chrysanthemums. The cut of the latter last year was over 150,000 blooms and this year will somewhat exceed that. Just now the special rush is in plants, grafted and own root roses, carnations, chrysanthemums and bedding plants. This branch of the business has grown with the years until it has become one of the most important, especially at this season. Three photographs are here produced illustrating in a small way certain portions of this work.

No. 1 shows a house of young grafted rose plants ready for shipment. These are now nearly all in 3-inch pots and in fine condition for benching. One hundred and fifty thousand rose plants were grafted this year, and already the supply of some varieties is exhausted. The heaviest demand has been for Killarney, although Bride and Bridesmaid have held their own as standard favorites. Richmond, too, has been a good seller, in fact, better than was anticipated and the result is that Mr. Pierson has been obliged to turn down some large orders for this handsome red variety.

The new roses, My Maryland, Mrs. Jardine, Rhea Reid, Queen Beatrice and Mrs. Potter Palmer have been much in demand and will be grown very generally throughout the country the coming season.

Photograph No. 2 gives a view of the propagating house for bedding plants. This is a very busy place at this season. Here coleus, ageratum, salvia, heliotrope, etc., can be found by the thousands. This department has grown wonderfully within the past few years. The output of these small plants this year will exceed one million, and they are shipped to all parts of the country that can be safely reached.

Photograph No. 3 shows the chrysanthemum propagating house and some of the young stock ready for shipment. They require about one hundred thousand of these at Pierson's for their own benching and as many more for orders, which means considerable work in this department. All of the standard and many of the new varieties are found here in quantity.

Mr. Pierson will grow about the same number of roses this year as usual, which means in the neighborhood of 75,000 plants. Killarney is still a favorite for pink, in fact, occupies a position of its own. It has made friends by the thousands throughout the country and holds them securely in spite of all competition. Richmond will not be given quite as much space this year, for while it is a handsome rose in winter, its tendency to open too quickly, as warm weather approaches, detracts from its value commercially. Bride and Bridesmaid will both be given plenty of space in the houses the coming season, having proved themselves undoubted necessities among florists.

Mr. Pierson considers My Maryland one of the most promising of the new varieties and will plant about 10,000 this year. Mrs. Jardine and Rhea Reid will also be given considerable room. He will plant one or more houses of White Killarney, which sported with him last year, and promises to prove a valuable addition to his assortment. In shape, foliage and habit it is similar to the original and will no doubt be equally prolific.

W. P. H.

Hardness of Southern Grown Trees.

Under the heading of "Hardness of Southern Grown Trees" the National Nurseryman has some notes on the subject, from which it summarizes that it makes but little difference where grown, as a plant does not change its constitution. While this is practically correct, yet as an absolute fact it seems indisputable that in the course of years a tree may become more or less hardy according to where grown, as many examples prove. But the conditions to effect such a change are more than a mere possibility, as said, practically no change is noted.

Southern grown trees take longer to mature their growth than those raised in the North. The farther south one goes, the quicker is growth made and matured. This is only in the case of some seeds; seedsmen prefer to get their supply from a Northern locality. This, too, is the reason why some seedlings raised from Southern seeds are injured in the North in winter. Growth of many seeds is such that it does not ripen, hence it gets killed in winter.

Simple Concrete Bench Construction.

Concrete benches are, at the present time, receiving the attention of prominent growers throughout the country and have been installed in a number of establishments with, as far as can be learned, excellent results. Many types of construction have been adopted, mostly devised by growers themselves.

The methods employed have been more or less crude, according to the mechanical abilities of the constructors, the question of mold- and other convenient auxiliaries presenting considerable difficulty attended with expense. With a view to removing this difficulty and furnishing growers with proper molds and clamps to make the construction of a concrete bench a

Fig. 1. Wittbold Bench Clamp. simple problem even to those not possessed of recognized mechanical ability. E. H. Hunt, 76 Wabash avenue, Chicago, is placing on the market these accessories, which comprise the outfit for building benches under the Wittbold system of construction, that has proved to be one of the most simple, as well as successful, systems yet followed, and which entails the least expense. We are pleased to present illustrations of the work in detail, and to describe the method of construction.

The mixture used is the following:
 One part good Portland or Atlas cement (or other equally reliable brand).
 One part sand (torpedo size).
 Two parts sifted ashes.
 Mix the sand and ashes well, then add the cement, seeing that it is evenly distributed. Water is then to be added, and the mixture worked to the consistency of mush. The mixture should be used as soon as completed, for if it sets or hardens it becomes useless; consequently the builder should have his work all ready prior to the making of the mixture.
 Our description of the work applies to a bench 100 feet long by 5 feet wide, and may be taken as a basis for the construction of benches of other sizes. Set two rows of posts, the rows four feet apart; each post in a row should be from 4 to 5 feet apart, making a total of 45 to 50 posts in all. The work should then proceed as follows:

Fig. 3. Lay the flooring on the crosspieces, cutting round holes in the flooring so that the top of the posts comes up flush with the flooring.

- (1) Cut 25 pieces of 2 x 4's, each piece 5 feet, 2 inches long, and screw to the end of each a Wittbold bench clamp as illustrated in Fig. 1. These will make 100 feet, spacing them 4 feet apart.
- (2) Run two stringers, 2 x 4, the full length of the bench, resting them on temporary 2 x 4 posts driven in the ground. These stringers should be placed 4 feet apart. This will allow the 2 x 4 crosspieces with the clamps to stand 6 inches over on each side. Set the stringers the height the bench is required to be, allowing 4 inches for the crosspieces, one inch for the flooring, and one inch for the cement.
- (3) Place the cross-stringers with the clamps attached on the two stringers 2 x 4, getting them in perfect alignment, so that the bench when completed will be absolutely straight and level. To keep them in place they may be temporarily nailed to the stringers, 4 feet apart, but large nails should not be used, as they may damage some of the lumber

- when taking the framework apart, rendering it unfit for subsequent use.
- (4) Set your post molds (illustrated in Fig. 2), or cement posts if you wish to make them beforehand, which is optional, 4 feet apart, so that each row of posts will be 6 inches from the edge of the bench. It is quicker to make the cement posts at the same time the bench is made. But if it is wished to save the purchase of a full set of molds the posts may be made at odd times and used when ready to construct the bench. This individual growers will decide for themselves. It is advisable to dig a small hole for each post, and fill it with cement, placing the post in the cement. In doing this care should be taken to see that the top of each post is level, or that all the posts stand the same height.

(5) Place the side boards in the clamps, using boards of a size to correspond with the required depth of the bench, allowing 1 inch for the bottom cement. (See Fig. 3.)

(6) Lay the flooring on the crosspieces, cutting round holes in the flooring so that the top of the posts comes up flush with the flooring. Note this in Fig. 3.)

(7) Place paper over the boards so that any large cracks will be closed, and that the cement will not stick to the flooring.

(8) Put in the inner board and fit the inside part of the clamp to the inner board by tightening the bolt. This will hold the inner board firm, and just one inch from the top of the flooring. It will be well to place at regular intervals one inch plugs between the side boards and the inner boards so that they will be held just one inch apart.

(9) Take a roll of common wire netting, 2 inch mesh, commonly known as "chicken wire," and stretch it the full length of the bench on the flooring, bending the netting so that it will come up flush with the side boards and end boards. This is all the reinforcing material needed, and it will bind the entire structure, making it a complete whole, capable of standing any strain likely to be put upon it.

Fig. 2. Post Mold.

Fig. 4. The Completed Bench before the Clamps have been Removed.

DIRECTORY OF RELIABLE RETAIL HOUSES

The retail florist firms advertising under this heading will accept and fill orders for flowers and floral designs forwarded them by mail, telegraph or telephone, the usual commission of 25 per cent. being allowed.

\$25.00, payable quarterly in advance, will entitle the advertiser to a four-line card, under this heading, for one year, 52 insertions. For every line additional to four, \$5.00 will be charged. Four lines will average 32 words; each additional line, 9 words. Each advertiser receives one copy, free, of our Florists' Telegraph Code.

Albany, N. Y.

EYBES, 11 North Pearl Street, cut flowers or floral designs delivered to any part of Albany and vicinity on telegraphic order. Personal attention given and satisfaction guaranteed.

Boston, Mass.

WAX BEOS, 143 Tremont St. Orders for New England States receive our careful attention. We are located in the theatre and shopping district. Telegraph and mail orders solicited. Satisfaction Guaranteed. Established twenty years.

Brooklyn, N. Y.

ROBERT G. WILSON, Fulton Street and Greene Avenue. Delivers anywhere in Brooklyn, New York, New Jersey and Long Island. Trade orders well cared for from all parts of the country, and delivered at Theatre, Hotel, Steamer or Residence. Telephones: Prospect 2840 and 4065.

Chicago, Ill.

HAUSWIETH, The Auditorium Florist, 232 Michigan Avenue. The quality of our work is of National repute, and we are prepared to execute commissions in first-class style in Chicago and its environs.

Denver, Colo.

THE PARK FLORAL CO., 1706 Broadway, J. A. Valentine, Pres. Orders by wire or mail carefully filled; usual discounts allowed. Colorado, Utah, Western Nebraska and Wyoming points reached by express.

Detroit, Mich.

JOHN BREITMEYER'S SONS, Broadway and Gratiot Avenue. We cover all Michigan points and large sections of Ohio, Indiana and Canada. Retail orders placed with us will receive careful attention.

Indianapolis, Ind.

BERTEERMANN BROS. CO. Our facilities for executing orders in an efficient manner are unexcelled. Our shipping territory includes the surrounding states. High grade flowers; expert workmanship.

Kansas City, Mo.

SAMUEL MURRAY, 1017 Broadway. I will deliver orders for flowers in Kansas City and vicinity promptly. A first-class stock of seasonable varieties of flowers always on hand. Wire me your orders.

Louisville, Ky.

JACOB SCHULZ, 644 4th Avenue. Personal attention given to out-of-town orders for Louisville and surrounding territory. Have a choice line of seasonable flowers always in stock; delivery facilities perfect.

New York.

YOUNG & NUGENT, 42 West 28th St. We are in the theatre district and also have exceptional facilities for delivering flowers on outgoing steamers. Wire us your orders; they will receive prompt and careful attention.

MYER, 611 Madison Ave. My facilities for delivering flowers for any and all occasions are unexcelled. Can give prompt service to steamer and theatre trade. Telegraphic orders solicited. Telephone, 5297 Plaza.

Retailers desiring a share of out-of-town trade should be represented by a card in this column.

(10) Nail tapered corks, iron corks preferred, one inch thick, to the flooring, any width apart it may be thought advisable, for drainage holes—5 inches to 6 inches will usually suffice. Place the large ends of the corks downward, so that they may be knocked out easily after the cement flooring is poured.

(11) The structure is now ready for the pouring of the cement mixture. First cover the flooring, and level it so that the top of the corks are just barely covered. To smooth out the cement on the bottom a board cut so that the bottom will just reach down and clear the corks, and over the side boards, may be used. It may be pulled along, using the side boards as guides. This is the quickest way to level the cement. Next pour the cement between the side boards and inner boards. Take out the one inch plugs, and smooth so that the cement comes even on the top of the sides. Allow the cement to set thoroughly, which means about 48 hours in Winter, and 24 hours in Summer weather. Of course, the weather, wet or dry, has a good deal to do with the actual time required. The bench

CLUB AND SOCIETY DOINGS

THE MONMOUTH COUNTY HORTICULTURAL SOCIETY held its monthly meeting in Red Men's Hall on May 1. President Joseph Kennedy in the chair. The secretary reported the receipts of the twelfth annual ball, which showed a balance of \$29. A delegation of six members, President Woods included, were visitors of the evening, and every one of them joined our society. It was decided at this meeting to hold the twelfth chrysanthemum show on November 4 and 5 in the Frick Lyceum at Red Bank in conjunction with the Elberon Horticultural Society, and the secretary was ordered to have the preliminary schedule printed at once.

The lecturers and lectures for the remainder of the year will be as follows: June 5—George A. Steele, "Shrubs"; September 4—William Turner, "Stove Plants"; October 2—N. Butterbach, "Melons under Glass"; November 6—George H. Hale, "Evergreens"; December 4—H. A. Kettel, "Bulbs." B.

TARRYTOWN (N. Y.) HORTICULTURAL SOCIETY.—The monthly meeting of this society was held on Friday evening, April 24, 1908, President Angus in the chair. Three new nominations were received, and James Stuart, Mamaroneck, N. Y., and Wm. Brown, Ossining, N. Y., were elected active members. We are gratified to say that donations to our prize fund are still coming in; and to date five silver cups are offered for the November exhibition. James W. Smith's prize, for the best two flowering plants, was won by Thomas Aitchinson, gardener to Mr. Henry Siegel, Mamaroneck, N. Y., with a large plant of pelargonium and one of calceolaria; both were well grown specimens.

The feature of the evening was the talk on "Water Gardens" given by Charles H. Tibbits, who is connected with the park department of White Plains, N. Y., and who has had very satisfactory results with aquatic plants. Subjects for next meeting will be "Shrubs" and "Hardy Perennials."

L. A. MARTIN,
Corresponding Secretary.

NEW JERSEY FLORICULTURAL SOCIETY.—Orchids furnished the principal attraction at the monthly meeting held on May 1, 1908, at the rooms in Orange, N. J. Lager & Hurrell, Summit, sent *Dendrobium Dalhousianum*, *Oncidium varicosum* Rogersii, *Cypripedium Rothschildianum* and *Curtisii* exquisite, and *Cattleya Mendeli* and *Mossie*. Thomas Jones, Short Hills, staged *Cattleya gigas*; and Joseph A. Manda, West Orange, *Dendrobium Brouckartianum*, flowered for the first time in America; a hybrid, *Laelia elegans Schilleriana* and *Oncidium Marshallianum*. Vases of mixed carnations came from the Colgate estate (William Reid, gardener); Spanish iris from Charles Hathaway (Max Schneider, gardener); Canterbury bells in six-inch pots from Mrs. William Pierson (Charles Ashmead, gardener); allamandas from Charles Munn (John Hayes, gardener); antirrhinums from A. C. von Gasheck (John Derwin, gardener).

The address of the evening was by Joseph B. Davis upon Cartography applied to landscape work, illustrated by many maps and pictures from the speaker's collection, including some rare India proofs by Alexander Anderson from the Downing publications. The sketch, the finished drawing, enlarged and reduced, the delineation of trees, grass and herbage, and foreign and domestic work as treated for the past hundred years, were touched upon during the evening. It was decided to hold a Summer recess.

J. B. D.

TREES FROM GERMANY.—Many men will get employment by the reforestation of the Adirondack preserve, says the Albany (N. Y.) correspondent of the Evening Sun. The State has purchased from Germany 950,000 seedling trees. They include 450,000 2 and 500,000 3-year-olds. The 2-year-old seedling trees have been put in a new nursery to remain one year, when they will be planted. The 500,000 3-year-olds, with 600,000 that the State already had in its nurseries, are now being planted in the forests, making a total this year of 1,100,000 seedling trees to be planted, twice as many as have been planted before in this State in any one year.

At present there are about forty men employed in the nursery and at least 100 in the planting fields in the forests. With so much additional planting to be done this force will have to be materially increased. The 2-year-old seedlings cost 75 cents a thousand and the 3-year-olds \$2.65 a thousand.

[Query: Why should the forestry authorities of New York State go to Germany for their supply of seedling trees? This is something the nurserymen of the State should inquire into. Ed. F. E.]

A Monster Tulip.

Courtesy D'Alcorn & Sons, Portsmouth, Va.

will now appear as shown in Fig. 4. After the cement has set—be sure that it has, or the bench will not hold—unfasten the clamps and take out the inner boards; knock out the temporary 2 x 4 posts; take out the stringers and crosspieces; remove the sides and the flooring, and the bench is complete.

If care is used this can be done without injuring the lumber, leaving it in shape for further use. In fact, it may be marked and used in exactly the same way each time, if the benches to be constructed are all alike.

After the flooring is removed go over the bench carefully, and knock out the corks, which may be used over and over again.

The cost of such a bench as described, 5 feet by 100 feet, including time, labor, and materials, should not be over \$30. This does not include the cost of the clamps, molds, and lumber; but as these may be used over and over again they are in the nature of an investment, and not cost. Of course, local conditions may affect the cost, but the figures given are based on Chicago prices. A bench of cypress the same size would cost, including labor and time, crosspieces, cedar posts, etc., fully \$35, and in about three to four years the expense is repeated, as the average life of a wooden bench is hardly four years.

J. H. P.

A Monster Tulip.

The accompanying illustration is reproduced from a photograph of a tulip—not a peony. It reported with us this year, and measured 21 inches in circumference! The bulb is not for sale. Color, a lovely soft pink; foliage variegated; stems 23 inches.

Seeds from the Seedless.

Mentioning the Agricultural Department reminds me of a letter received just the other day by Representative Walter Smith of Iowa. Judge Smith has a habit of referring to the people of his district as "the most enlightened constituency in the world," and, to tell the truth, their action in sending the Judge to Congress constitutes prima facie evidence of the truth of this boast. But just the same, one member of this same constituency slipped a cog the other day.

"Dear Judge," he wrote to Mr. Smith, "I understand the Agricultural Department is experimenting, and has been for some time, with a new variety of seedless tomato. If they have brought the plant to perfection and are distributing it, please send me some of the seeds." —Washington Star.

The Eucalyptus in California.

Residents of this coast are awakening to the necessity of planting forest trees for the requirements of coming generations in the mechanical arts. The eucalyptus family is receiving the most attention because of its great economic value in the manufacture of furniture, the interior finish to residences, its great tensile strength, which is necessary in wagon and carriage building. The different varieties have different colored woods and all of them take a polish equal to "bird's-eye maple." They are adapted to a great range of soil condition, but rich sandy loam produces the best results in the shortest time. At present, eucalyptus is a household word in Southern California, and everyone, no matter how small his land holdings, either has the thought in mind of planting or has already planted trees of this useful genus.

Because of the fabulous price recently paid—over \$200 per thousand feet, board measure—by carpenters to finish several buildings in this town, the get-rich-quick promoter has appeared in our midst, and is busy at roll top desks with paper and pencil figuring out to investors the great profits of the industry, in some instances making the amazing statement that in three years from planting, dividends may be expected from a grove of "blue gums." Eucalyptus globulus. The facts are that in good soil and with water, 10 to 20 feet beneath the surface, the trees will, after once established, make a growth of two inches diameter annually. The "blue gum" as we know E. globulus (indeed the entire family is known as "gum trees"), if planted on poor soil, and given no water nor cultivation, do not make half the growth named; nevertheless on rocky hillsides, and lands beyond the reach of irrigating canals, or locations where water cannot be found in sufficient quantities for the production of citrus or deciduous fruits the eucalypti may be profitably grown. All varieties must be watered the first year at least to get them established.

In localities where Summer heat is intense and the Winter temperature drops to twelve degrees below the freez-

ing point, the successful cultivation of these trees requires essentially different methods of procedure from those where reverse climatic conditions prevail. It is hazardous under those conditions to apply water and cultivate the young trees after the first of September. Cultivation may be continued, but water must be withheld, that the young trees may ripen the growth made from May to September.

Several years ago I planted near Bak-ersfield a grove of 7,000 trees of blue and sugar gum; the latter is known to the trade as E. corynocalyx. Water was plentiful of a temperature of 72 degrees. Cultivation was easy, and for forty days the uniform temperature of the atmosphere was 100 degrees in the shade, with a relative humidity of not over 11 per cent. These trees made the astonishing growth of 10 feet, with trunks of two inches diameter at the base for the "blue," one inch for the "sugar," from seedlings not as thick as lead pencils the first Summer; and because of their soft condition more than half were killed by a freeze of 12 degrees the first Winter. The second Winter finished the grove, and all the hopes of the planter were blasted. A few specimens of both of the subjects named, grown in the same locality, without water or cultivation other than to give them

stances six by six feet. When so set they necessarily run up into a bean pole size. Thus grown they cannot develop into trees of economic value; 10x10 feet is as close as a grove should be started, and not a leaf or branch should be taken off the young trees for three years, since defoliating debilitates them, and the result sought after—a sturdy well-developed trunk—is thereby defeated.

That the investment of time, money and energy in the growing of eucalyptus trees will be highly profitable, there is no doubt; but no one should engage in the industry who has not learned "to labor and to wait," since it will require at least two decades, with not over two hundred trees to the acre, to reap the fabulous harvest of coin the timber is sure to yield.

The illustration herewith is reproduced from a photograph of a living flag pole, a eucalyptus tree of the citriodora variety, growing in the lathhouse of the city salsyard of Howard & Smith, Los Angeles, Cal. This tree is 15 years old, 125 feet high, 14 inches diameter at the base, has always had all the water necessary to make a rapid growth. The picture shows the characteristic of this variety shedding its branches as well as its bark—a fact stated previously in these notes.

P. D. B.

Eucalyptus citriodora, 125 Feet High, at Howard and Smith's, Los Angeles, Cal.

a start when first planted, were not injured by the cold.

The eucalypti are not difficult trees to transplant when small, if the operation is not attempted until the soil and weather are warm. The impatience of growers for quick returns leads them to plant the trees too closely, in some in-

The Orchid Section.

At the initial meeting of those concerned, held on March 14, in the rooms of the American Institute, W. J. Stewart in the chair, a committee on organization and scope was appointed, com-

S. PENNDORF, 81 Oak St., New Rochelle, N. Y.

posed of the following members: C. Moore, J. M. W. Kitchen, J. E. Lager, J. A. Manda, H. A. Siebrecht, E. H. Koehrs, G. V. Nash, G. Schlegel and Mrs. G. B. Wilson. All but the two last mentioned agreed to serve.

At a later general meeting held on April 4, at the New York Botanical Garden, E. O. Orpet in the chair, this committee submitted a comprehensive report. The recommendations of the committee, as embodied in this report, were adopted, and the following action taken:

RESOLVED: That the present committee on organization be continued, with instructions to take steps necessary to carry out the resolutions presented.

In furtherance of these instructions, the matter was brought before the Council of the Horticultural Society of New York at its meeting held on April 8, and a request for affiliation was met by the adoption of the following resolution by that council:

RESOLVED: That the Council of the Horticultural Society of New York appoint an orchid committee to establish an orchid section of the society, the members of which may be resident in any portion of the country, and to encourage the interest in and the cultivation of the orchid in the United States.

This resolution was made immediately effective by the chairman of the Council of the Horticultural Society of New York continuing and appointing as an orchid committee all the members of the committee on organization. This council, moreover, placed at the disposal of the orchid committee, for the forthcoming flower show in May, one gold medal, three silver medals, and three bronze medals, which may be awarded at the discretion of that committee for special exhibits of new or rare plants, or for other orchid exhibits of merit.

To insure the success of this movement toward broadening the interest in orchids and orchid growing, all interested are earnestly urged to extend their individual support to the newly created orchid section.

Any one can identify himself with this orchid section by becoming a member of the Horticultural Society of New York. The annual subscription for active members is five dollars, which may be sent with the application for membership to the office of the secretary of the society, Room 60, 55 Liberty street, New York City.

E. H. ROBERTS,
Secretary, Committee on Organization.

Trade Notes.

Very little change for the better is noted in the florists' trade the past week; undoubtedly weather conditions had some effect, for it was about the worst week we have ever experienced in any Spring—wet and lots of snow, with the thermometer below 32 degrees for several days. At present, May 5, it is still cool, with more rain promised.

It has been reported that the fruit crop in this section has been destroyed, although this is doubted; it is reasonable to assume, however, that considerable damage has been done by freezing, but it will require later returns to show the extent. Fruit trees bloomed in unusual abundance this year and a good crop was assured.

The stock of cut flowers at present is good and abundant, but prices are very unsatisfactory. Outdoor stock selling very cheap hurts the market. Plant trade, on account of the inclement weather, was very dull—not much doing except in hardy shrubs, privets, etc., for which there was a fair demand.

The tulip beds in our parks and private places this year were good; with but a few exceptions the blooms were fine. Hardy shrubs also bloomed very freely, magnolias being fine.

The plantmen are very busy now with the many hotbeds and work of outside planting starting in. From indications the number of plants grown for this season will be larger than last year.

Mr. and Mrs. Gustave Ludwig have announced the engagement of their daughter, Miss Lena Ludwig, to Victor F. Bergman of Chicago, the wedding to take place next month. Mr. Bergman is a prominent florist of Chicago, and Miss Ludwig's father is the senior member of the firm of G. & J. W. Ludwig, the well-known North Side market florists.

Superintendent Wm. Hamilton of the North Side Parks has resigned, and hereafter the North Side Parks will be under the supervision of the Pittsburg Bureau of Parks, a part of the Department of Public Works. Mr. Hamilton has been superintendent for many years and in his time did a great deal for the improvement of the Allegheny parks. The city secured the Phipps conservatories through his efforts, and it was also due to him that they were stocked with suitable plants best adapted to the atmosphere of the city. Mr. Hamilton is up in years (in the seventies); his plans for the future are to rest, and so he retires in the knowledge of a work well and faithfully done. E. C. REINEMAN.

Detroit.

Trade News.

Cold, cloudy weather accompanied with snowstorms completely upset the peddlers' plans as the supply became shortened and the legitimate florist once more came back to his own. A good deal of funeral work kept the stock down, while store openings called for large plants and baskets.

The local parks are beginning to show up beautifully in pansy beds and large beds of primula, and arnica. Tulips are still far behind and it will be a week yet before they are in bloom.

The cut of indoor tulips and other bulbous flowers will be about finished this week. FRANK DANZER.

Not the Right Name.

She was extremely bashful when she entered the florist's shop.

"I'd like to get some flowers for a young man's birthday party," she said, blushing a cherry red.

"Yes, Miss," replied the polite florist, with a low bow. "How would sweet Williams do?"

"I'm afraid they wouldn't answer," she faltered. "You see, he is not a William; he—he is a sweet Charlie."—Columbus Dispatch.

ORCHIDS

We are now booking orders for freshly imported orchids of all leading kinds to arrive during 1908, at greatly reduced prices. Write us for information as to kinds and prices.

We have just received the following orchids: Oncidium Tigrinum, O. Sarcodes, O. Forbesii, Sophronitis grandiflora and coccinea.

LAGER & HURRELL, Summit, N. J.

Many Florists write us it makes plants grow rapidly, healthily, and luxuriantly with absolutely no harmful effects. It will help you make your business pay. Trial 12 lb. bag 75c. (dealer's price). Send for free booklet: "How to Make Things Grow." Also Special Offer to Florists.

ELLIS-CHALMERS CO., 100 William St., New York.

St. Louis.

News Notes.

Charles Ford, traveling salesman for A. Hermann, New York, and Julius Dilloff, in the same capacity for Schloss Brothers, New York, called on the trade last week with good results.

Theodore Kluckenkemper, one of the Florists' Club members, will leave this week for an extended trip through Europe. He will be joined by his wife in July, who will meet him in Germany, and from there travel home together, stopping at Niagara Falls to attend the S. A. F. Convention.

Edward Gerlach, bookkeeper and manager for Kuehn, served on the jury in one of those famous hoodlums cases the past week.

George Ostertag, superintendent of public parks, says that the parks this year will be more elaborately planted than ever before, and has a large force of men at work. The department has just issued its 1907 report, which can be had on application at the park department.

John Steidle, State vice-president of the S. A. F., will be at the next Florists' Club meeting ready for any report from the members as to trade conditions for the Eastern part of Missouri. Applications for membership in the society will also be taken care of by Mr. Steidle.

W. C. Young & Company have just issued their new catalogue pertaining to their new line of iron garden furniture, wire tree boxes and trellises. They are having a good run on these, both in and out of the city. An extra force of help has been put on to catch up with orders.

The executive committee of the St. Louis Horticultural Society held its regular monthly meeting the past week in the rooms of the Missouri Athletic Club. Appropriations for prizes were made for the Fall flower show, which will be large, in addition to the regular Shaw prizes, which amount to \$500. A committee for the selection of a hall was appointed to report at the next meeting. The attendance was large and an enjoyable evening was spent.

The St. Louis Florists' Club will hold its regular monthly meeting Thursday afternoon, May 14, in the new hall, 1023 Locust street. Secretary Bentzen and President W. C. Young are making great efforts to have a large attendance, as there are a number of important committees to report on their work, among them being the outing and potery committees. The meeting will be called, as usual, at 2 p. m. St. Patrick.

Cincinnati.

Trade and News Notes.

Business remained at the lowest ebb until Saturday, May 2, when it took a turn for the better, and stock has commenced to shorten up. Carnations jumped from 50c. per 100 up to \$2 and \$2.50, and roses from \$1 to \$2 to \$2 to \$5. Carnations cleaned up quickly Monday morning, May 4, and we hope to see a continuance of better business. Outside orders are coming in more frequently, and the tone of the market at this time is much more encouraging. The growers also report better sales.

Superintendent George Walker is sick with pneumonia, and it is feared it may prove serious.

Ben F. Hensley and wife of Knights-town, Ind., spent Sunday in the city visiting friends. Mr. Hensley has a fine plant of three homes, 150 by 20 feet, and will erect three more this Spring. Carnations are his specialty.

Will, Lodder and sister Mary of Hamilton, O., were callers on the 4th, as was also John T. Herdigen of Aurora, Ind.

Frank Kyrk, son of L. H. Kyrk, has a responsible position with the Pittsburg Lamp & Glass Company, with headquarters in Cincinnati.

Memorial Day promises to see good business for the florists again this year.

STOCK YOU NEED

Shippenshnrg Floral Co., Shippensburg, Pa.

Peonies will be plentiful, unless caught by a heavy freeze. We have had several skirmishes with Jack Frost lately, but so far not much damage is reported. Ben George is all smiles to-day, May 4. It's a new daughter. This makes eight children for Mr. and Mrs. George. Ben will soon have enough help of his own to run his greenhouses. Congratulations! E. G. G.

If a man were to quit eating because he wasn't hungry, he would be sent to a lunatic asylum. What about the man who quits advertising because he hasn't enough business?—Curtis Publishing Co.

LIKE THE BEE

So is Godfrey Aschmann, the Philadelphia Hustler, Never Idle

Come and see for yourself. Look around, then think what wonderful work has been done since last year. Is it possible? Yes, Aschmann together with his trustworthy family and employees who stand him faithfully by, get it done. They do like the bee that carries the dust from one flower to the other. You, what you have seen, carry the news to your neighbors. Every hole and corner now full, ready for immediate shipment.

From the lands afar, where the choicest are, I gather the plants I supply. Or grow my own, with care unknown. See the best are the ones you buy. Then send in your orders and see your trade grow. None can surpass Aschmann's, wherever you go.

GERANIUMS. S. A. Nutt, John Doyle and pink, 4 in. pots, \$7.00 per 100. AGERATUM, dwarf blue, best bloomer, 4 in., \$7.00 per 100.

BEGONIA Vernon, finest strain, as dark as blood. Seeds of this beautiful variety picked by myself from specimen plants in Zurich, Switzerland, 4 in. pots, \$10.00 per 100; 3 in., \$7.00 per 100.

BEGONIA, new improved Erfordi, the true variety. Seeds are gathered by myself in Europe; nothing can beat this beautiful variety, either in brilliancy or in blooming, as it is always in flower Summer and Winter, 4 in. pots, \$10.00 per 100; 3 in., \$7.00 per 100.

SALVIA or Scarlet Sage. I only grow one variety, and that is the true Clara Bedman or Bonfire variety, of medium tall habit. A whole bed planted in mass is a sight to see when blooming. It looks as if the whole bed is on fire; hardly any leaves are visible. This variety decorates all the gardens in the capitals of England, France, Germany and Switzerland. The seeds of this novelty are collected by myself in Switzerland, therefore, I can supply the pure stock, 4 in., \$10.00 per 100. HELIOTROPE, 4 in., \$7.00 per 100. FUCHSIAS, best varieties, 4 in., \$7.00 per 100.

CANNAS, 10 best French sorts, including the dark-leaved varieties, large plants, 4 in., \$8.00 to \$10.00 per 100. COBÆA Scandens, 4 in., 10c. IVY, Hardy or English, 3 feet high, 4 in., staked up, 10-12c.

VINCA VARIEGATA, 4 in., \$10.00 per 100; 2 1/2 in., \$5.00 per 100. COLEUS, Golden Bedder, Verschaffeltii, Queen Victoria, 2 1/2 in. pots, \$3.00 per 100. Fancy varieties, \$4.00 per 100.

GERANIUMS, Mme. Salleroi, 2 1/2 in., strong, \$4.00 per 100. PHLOX DRUMMONDI GRANDIFLORA, 2 1/2 to 3 in., \$3.00 per 100. CUPHEA or Cigar Plants, 2 1/2 in., \$3.00 per 100.

LOBELIA Compacta and Trailing (Crystal Palace), 2 1/2 in., \$3.00 per 100.

GODFREY ASCHMANN

Philadelphia.

Around Town.

John N. Kulp at Wayne Junction has been very busy all this season. At this time he is preparing ground for his carnations and is planning to have an extra large number this year. Mr. Kulp gets a large amount of the trade in and about Wayne Junction.

Wm. Barth, proprietor of the Girard Florist Shop, at 2841 Girard avenue reports good business in funeral design work; he is also selling a large number of plants.

Samuel R. Aiken, 1722 Columbia avenue, has a very attractive stock which is moving very well. He is also getting some orders for cemetery work in which he expects to be kept busy this season.

J. A. Wolff, N. E. corner Ridge avenue and Dauphin street, is doing considerable design work.

Edwood R. Martin & Company at 2612 Columbia avenue have a splendid display of palms and potted plants; they have had a fine business so far this season and look for some nice orders between now and Decoration Day.

J. Wolff, Jr., S. 43rd avenue and Twenty-eighth street, has had and is having a splendid business. Mr. Wolff says that he cut about six thousand flowers from his cattleya house. His display of orchids is very fine.

E. McGrath, 2307 Ridge avenue, reports a very successful trade in the year that he has been located at this address. He takes trips to parts of the country wherever he hears of any extra fine stock.

One of the nicest retail stores to be seen uptown is that of John C. Gracey at 2634 Columbia avenue. The general appearance is very pleasing to the eye and the impression is one that stays. Each customer is presented a set of post cards with views of the store on them. He also sends to his customers each month a blotter on which is printed his advertisement and another picture of the store or a picture of some extra fine piece of work of which he has numbers to pick from. A standing order for flowers this week is one calling for 2,000 carnations daily; the customer is the brother of Mr. Gracey, who has a drug store in West Philadelphia, and he proposes to give each customer who calls at his store a carnation.

The store of J. Wolff Moore, 1120 Columbia avenue, is very nicely stocked. Business is reported fairly good.

Charles H. Fox, at his store at Twenty-first street and Columbia avenue, has an attractive display of palms and ferns. He reports some good orders for funeral work.

John Curshaw of 1130 Columbia avenue has a fine display of potted stock and is selling quite a number of plants.

The Pine Tree Silk Mills Company is putting a new finish ribbon on the market and so far the demand has exceeded the output. The new ribbon is highly finished and is waterproof, and can also stand very hard usage without losing any of the gloss. This firm has a very attractive line of goods and invites visitors to call and examine the stock.

John Giles, Reading, Pa., has been in town calling on the trade and his numerous friends here.

Alfred M. Campbell of 1510 Sanson street prides himself on his choice assortment of green goods and he is showing a really fine lot of this kind of stock.

Eugene Bernheimer at 11 South Sixteenth street is receiving some nice American Beauty and Richmond roses. Some fine sweet peas were also seen here.

S. S. Pennock of Pennock Meehan Company is up the State on a combined business and pleasure trip and expects to be gone for several days.

W. E. McKissick & Company, 1621 Ranstead street, are handling fine long stem Richmond and American Beauty.

A ZurNieden of Forty first street and Lancaster avenue says that since Easter business has been much better than he expected.

William S. Rich and family of West Philadelphia, are sojourning at Atlantic City.

Club Meeting.

The Florists' Club met on Tuesday evening, about 20 members being present. The speaker was Edwin Lonsdale, who gave an interesting and instructive talk on schizanthus. At the

next meeting there will be a smoker; a large attendance is requested. A large delegation to the S. A. F. O. H. convention at Niagara Falls next August is expected, and Philadelphia will have her usual bowling team there.

Mr. Lonsdale exhibited a dwarf form of Schizanthus Wisetonensis named compacta, regarding which the committee on novelties, Robert Craig, chairman, reported as follows:

"Your committee reports that it has examined the seedling of Schizanthus Wisetonensis, which Edwin Lonsdale has raised and named S. Wisetonensis compacta, in the greenhouses at Girard College, and again a sample plant at this meeting. It is much dwarfier than the Wisetonensis type, very compact and floriferous and is very attractive. Several colors are to be had. Mr. Lonsdale has several dozens of these plants, and they are all of the same compact form. In the opinion of the committee Mr. Lonsdale has a very valuable plant."

There were also on exhibition some window boxes, pedestals and vases of concrete construction, which attracted considerable attention. P. M. READ.

Washington, D. C.

Trade Notes.

There is little to say concerning the market. The drought which has prevailed for several weeks ended on Saturday and much needed rains have fallen.

Washington is still thronged with people, this being the long session of Congress. Many will remain until quite late. This class is giving functions daily, most of them decorated elaborately, thus keeping up business.

There was a meeting of the Florists' Club on the night of May 5, which notwithstanding the inclement weather was well attended. There was also an entertainment and refreshments in connection with the meeting. Professor Charlemagne Koehler, who has so frequently entertained the club and its guests, and who was elected an honorary member at its last meeting, was present and recited to the great amusement of all present. Professor Koehler is to give a testimonial entertainment for his benefit at Rauscher's Hall, Connecticut avenue and L street, N. W., on May 19, which it is hoped will be largely attended not only by his many florist friends, but by others. In this entertainment your correspondent has been informed that in addition to Professor Koehler's appearance in some of his best repertoire, the best local talent of his selection will appear. Tickets of admission are on sale at \$1 each and may be had by addressing Professor Koehler at Hotel Manhattan, Washington, D. C., or Chas. McCauley, secretary, Eighteenth and Kearney streets, N. E., City. There is certainly no better way in which the florists of Washington can show their appreciation of past favors than by a large attendance and active interest in the financial end of the benefit testimonial for the professor. JAS. L. CARRERY.

Newport, R. I.

Trade Notes.

The marriage of Miss Pauline Leroy French to Mr. Samuel Jones Wagstaff created quite a little stir in Newport this week, and brought a large number of our Summer residents on from the cities for the event, which gave the local florists extra work.

Jos. Leikens had charge of the decorations at "Harborview," the residence of Mrs. F. O. French, and at St. John's Church where the marriage ceremony took place. Mr. Leikens arrived here on Sunday morning with several assistants and at once went to work getting things in shape at his Bellevue avenue store, which he opened temporarily.

The decorations for the dinner given Saturday evening by Miss French for her maid of honor and bridesmaids was in charge of Gibson Brothers, who put up a handsome decoration, using besides

ROSES

Baby Rambler, 5 in., in bud and bloom, \$25.00 per 100. Rooted Cuttings of CHRYSANTHEMUMS, Nonin, Mardock, and Engobard, \$9.00 per 1000.

Cash only.

PAUL BRUMMER, CORONA, L. I.

the Bride rose lit of the valley with carnations and bouquets. For a touch on the next day the Richmond rose was used, as fine a lot as I have ever seen.

The decorations at the house for the marriage consisted of American Beauty and Bridesmaid roses, and at the Zerkbrisk Memorial Church, where the ceremony was performed, palms and Easter lilies formed the principal decoration. Bridesmaid roses in large bunches were carried by each of the eight bridesmaids, the bride carrying a shower bouquet of lily of the valley arranged by Leikens.

The decorations about the grounds were by E. L. Ziegler. A. M.

CHANGES IN BUSINESS.

The Florists' Exchange will be pleased to publish under this heading all changes occurring in the addresses of firms connected with the trade as well as notices of concerns or individuals just starting in business. All such items are inserted free of charge.

CADILLAC MICH. Joseph Carlsson is running the greenhouse plant on Cadillac street succeeding Mr. Tweedie.

RAPID CITY, S. D. Dr. D. N. Surface is building a greenhouse and will embark in the florist business.

BLOOMINGTON, ILL. The Amber Plant Company is a new concern organized here for the growing of plants, flowers, etc.

BELLEFONTAINE, PA. E. J. Eckenroth will erect a greenhouse on Howard street and engage in the business under the name of the City Florist.

NEW HAVEN, CONN. The florist establishment of John Doughty will hereafter be known as Doughty & Company with greenhouses at 200 Kimberly avenue.

S. N. PENTECOST

1790-1810 East 101st St., CLEVELAND, O.

Jottings for Florists.

There were very few of the single-flowered, crimson-colored climbing rose Hiawatha offered for sale as Easter plants in Philadelphia in the year 1908. It is a meritorious variety and it would be as well to remember that no time should be lost in securing stock for 1909, for it is a dainty little beauty.

Under the heading "Reminiscences of a New York Plantsman," in a recent issue, mention is made of "Lady Pollock" as belonging to the Odier class of pelargoniums. I presume Mrs. Pollock is meant; and if so, Mrs. Pollock belongs to the golden tricolor geraniums, or, more properly, golden zonal tricolor pelargoniums. The Odier pelargoniums are a section of the show pelargoniums, a development made by florists in France, and would be called, as are all this class of pelargoniums on this side of the water, the "Lady Washington."

It is reasonable to suppose that at some time in the history of floriculture in America a pelargonium was in existence named Lady Washington, and the name has stuck ever since. I do not mean among florists, but among the people in general.

Mrs. Pollock was raised in England by a gardener named Peter Grieve. It is to be regretted that the golden tricolors do not thrive well in America.

What shall be done with the Holland bulb growers and exporters? Those who duplicate and send over to America inferior bulbs and not true to name! A case in point: In the two large circular beds in front of the main building in Girard College grounds it was the desire to have a color scheme with tulips that should have been quite effective for this Spring's display. The colors desired were red, white and yellow. The white and yellow came out all right, but the red! Belle Alliance was ordered, came along two weeks too late to give the desired effect, and some Joost Van Vondel were ordered for a certain bed, but a very inferior variety was received, one similar in marking, but the colors were not nearly so clear and true as is the correct Joost Van Vondel, nor were the flowers so large.

The daffodils received here were mixed; the Bicolor grandis were nearly half Golden Spur. To stop importing for one year might cause the Hollanders to realize that gross errors (?) had been made; and it might perchance bring them to their proper senses.

E. H. HUNT, 76 Wabash Avenue, CHICAGO

Under the heading "Our London Letter" appearing recently in The Florists' Exchange reference is made to a certain carnation exhibited at the meeting of "The Perpetual Flowering Carnation Society" recently held in England. Mr. Burnett was the exhibitor, and the name of the variety was Mikado, the color of which is described as "a peculiar shade of heliotrope purple." Same was given an award of merit. The name Mikado has been given to a carnation raised and disseminated in America, by the firm, of which the President of the American Carnation Society, Marcellus A. Patten, is the senior partner. As I remember the Mikado it was in coloring an intensified Prosperity; that is to say, the markings were similar but the coloring was more pronounced than is to be found in the older celebrity. How does the color of the English Mikado appeal to carnationists of America?

Many years ago I remember among a "set" of new carnations—new carnations were put out in sets in those days—one of which was a slaty color, with a few pink stripes in each petal, but I cannot now recall the name. In that set there were varieties bearing such illustrious names as George Washington, Henry Ward Beecher, Horace Greeley and others. (Will some one furnish a complete list with descriptions thereof? It would be interesting.)

Since writing the above I have received the following letter from President Patten of the American Carnation Society: "Replying to your inquiry concerning Mikado, I would say this is the result of a cross between Governor Roosevelt and Prosperity, raised in 1901. Color, white, overlaid with distinct blotches of crimson, stiff stems, blooms three to four inches in diameter; strong spicy odor, good calyx. We disseminated Mikado to the trade during the season of 1905 and 1906. It received a first-class certificate of merit at Chicago from the American Carnation Society January 25-26, 1905, also a report of merit

from the Boston Gardeners and Florists' Club, December 20, 1904, also a report of superior merit from same club January 16, 1906.

"The bloom is after the style of that of Prosperity, but blotched crimson, not pink as in Prosperity, while the habit of growth is similar to that of Governor Roosevelt.

"Can't you be with us next year at Indianapolis?"

This fact proves that an International Registration Bureau will have to be established to avoid the confusion of plant names. Especially does this apply to the names of carnations, as new varieties of perpetual flowering carnations are being raised and put out in both England and America, so that it behooves all societies devoted to horticulture in America and all other countries to anticipate possible confusion in the duplicating of names, by adopting measures that will reduce the probabilities of having one name to two or more distinct varieties of plants to a minimum.

The surplus of carnation flowers is bothering the growers thereof quite a good deal. As a general rule, in all businesses the supply is regulated by the demand. The regulation of the production of carnations according to the demand is a very difficult problem to solve, especially this year, because to produce a crop of carnation flowers, plans have to be made and action taken a year before a crop may be expected.

The overproduction of carnations at the present time is caused through plans being laid when times were prosperous and the crops matured when times are poor.

Men on the streets dispose of a goodly number of carnations, but to a grower of flowers they present a very sorry appearance in the way they are generally handled by the curb-merchant; for the most part they have a very bedraggled look. It would be far better if all flowers could be disposed of through the flower shops.

To do this it would be advisable for the retailer and grower to cultivate

closer relations, and it is reasonable to suppose that the results would be very much better for both branches interested, and the science of floriculture would be more far-reaching in its effects, and in consequence more beneficial generally.

The seedsmen and nurserymen, especially the seedsmen, are doing effective work through the Council of Horticulture in teaching lessons in gardening for amateurs by the dissemination of information through the daily press. Would it not be worth while for carnation specialists to spread information through the same sources as to the value of carnations as a cut flower for the home?

It is true, in sending matter to the daily papers for publication the smack of selfish commercialism must be carefully eliminated, in the material so furnished, and the person having the matter in charge must be above suspicion! This very fact is where the organizers of the Council of Horticulture displayed great wisdom in selecting a secretary who is in no way commercially connected, but who is instead associated in a public garden where good work is being accomplished for the grand cause of horticulture in general.

There are active members belonging to the American Carnation Society who are fully capable of taking hold of booming the demand for carnation flowers, through the medium of the reading matter of the public press, but whether it could be done acceptably to the controlling powers of the daily newspapers is problematical. That the growers of carnations will have to take the initiative—if any is taken—in the movement to increase the demand for the flowers they grow, goes without saying.

The late Charles T. Starr, one of the pioneer carnation growers for Winter flowering in America, advertised his flowers for sale at retail, but only through his catalogue, so far as I know. He did not, however, sell all that he grew in that way, for some he sold at wholesale to retailers, and the

VIOLETS

Governor Herrick

New single violet, fine deep color, heavy foliage, will produce 135 to 160 blooms per plant; hardy stock, 10-inch stems, keeping qualities unsurpassed; good seller. Price, \$25.00 per 1000 in clumps.

Cash with order.

**LOUIS D. McCOY
SPRING VALLEY, ROCKLAND CO., N. Y.**

VIOLETS

Strong, healthy rooted runners of Lady Campbell and California, \$1.00 per 100; \$6.00 per 1000. Fine sand-rooted cuttings of Lady Campbell, \$1.00 per 100; \$7.00 per 1000. None but healthy, well-rooted plants sent out. A full stock of field-grown plants of the above ready in August.

Address, CHARLES BLACK, Hightstown, N. J.

remainder he sent to a commission house.

No doubt the time will come when the grower will find it advantageous to advertise in the better class of weekly and monthly publications, flowers to be delivered twice weekly to any point within reasonable distance in the United States, either by mail or express. That should have a tendency to relieve the surplus somewhat and at the same time to carry fragrance, beauty and consequent pleasure to remote parts of the country, where such flowers are not often grown or seen.

Of course there is a limit to the distance carnations may be carried safely and give satisfaction, but carnations are among the very best of flowers to carry long distances successfully, and with care taken in packing no doubt a business could be established that would be profitable to the grower and generally satisfactory to the buyer. EDWIN LONSDALE

REVIEW OF THE MARKET

NEW YORK. The cut flower market shows no improvement over last week. There was a little spurt on Saturday last but it was short-lived, and no attempt at raising prices was made. Stock cleaned out better than had been the rule for several days, particularly in roses and carnations. The supply of American Beauty and other roses so far this week seems to keep well up, and where clearances are effected there has to be considerable cutting of prices. Efforts are made to get 50c. for American Beauty at times, and 50c. and 50c. for the best in the tea varieties. There are very few indeed that can be disposed of at these figures, and averages will necessarily be quite low. Carnations are still plentiful, and a great many are offered at 50c. per 100; extremely good flowers are sold in quantities at \$1 per 100, a few reaching over that figure when bought in small lots. The violets coming into the city have very much the appearance of the wind-up of the season; so far as prices go on these, there are none, as the market for them seems to be entirely over.

Suandragon and sweet peas are extremely plentiful, but no fixed prices obtain; buyers who need the flowers in quantity can get them at their own figures almost. There is a fairly steady supply of cattleyas, oncidiums and dendrobiums; demands are not any too extensive. Gardenias are fairly plentiful, and with present market conditions they have to be sold at quite reasonable prices in order to get rid of them. Lilies, perhaps, are suffering more than any other flower; a great many are sold at \$1.50 per 100, and some of the best coming into the market are obtainable at \$3 per 100. The supply of Marguerites is now quite heavy; unfortunately, when there is little demand for them. Some gladioli reach the market every day, though they are as yet in somewhat limited quantities. The only lily obtainable just now is the Southern grown, and this is chiefly handled by the street merchants. Both Spanish and German lilies are coming in regularly; and the supply of tulips and narcissus is rather excessive. So far the month of May has been a very quiet one in cut flower lines.

CHICAGO. Quite an improvement is noted in the market this week, but it is still a long way from the normal condition. Shipping business is better, orders from outside points being more generous and frequent. Local demands, however, continue very light, although retailers in general appear to be carrying fair stocks—a fact which strengthens a supposition that many of the larger stores are receiving direct shipments from growers while produce is unduly plentiful. A few days of dark weather have curtailed arrivals to some extent, and local frosts have kept down the influx of outside stock from very near points. Roses continue plentiful and cheap, and bargain transactions are the rule rather than the exception. While isolated cases may show slightly higher returns, rose prices in general are within the range of those quoted. Carnations are still plentiful, but prices are stronger, and little business is done below the dollar mark, except where a clearance is absolutely necessary. There are the quantities of lilies to be had, and prices remain low. Good lily of the valley is not over plentiful, and the best will realize as high as 4 cents. Sweet peas are in good demand, and at times are in short supply. Violets are still coming in, but the quality is nothing, and thousands go to the dump pile. Jasmine from the South is arriving in quantities, and moves at any figure from 50c. to \$3 per 100; at the last named figure they must be exceptionally good. Peonies are not coming in in very large numbers, but the quality shows improvement. Daisies, both yellow and white, are plentiful, the former moving well at 2c. Bulbous stock is not so abundant but moves slowly, arrivals generally being inferior in quality. J. H. P.

BOSTON. The past week has seen no improvement in business; in fact, not far was business done so much at a standstill as it is now. This is especially felt by growers who sell their own products. Those who have an out-of-town or shipping trade find more outlet for their goods, but prices are low. There are good grades of roses now in the market. American Beauty have the lead followed by Richmond and Killarney down to the more common Bride and Bride-maid, of which varieties there are large numbers on the market. Carnations are very plentiful. Violets are all gone. Sweet peas are in ample supply. And there is abundant stock of bulbous stock. Lilies remain plentiful. Lily of the valley sells more than all other lilies now quite plentiful. There is a little from the South, but does not sell. J. W. D.

INDIANAPOLIS. The most optimistic forecasts for May do not predict much that would be auspicious in the floral world. Should funeral work and counter trade continue in the fair way of the past two weeks, every one will be grateful until the wedding season is ushered in. Commencements in the smaller surrounding towns are generally provided for by the local florists; more of this work is being received each season. All kinds of flowers are limited in supply, as there has been little sunshine for ten days. The variety, too, makes it difficult to serve customers with satisfaction. The local cut of roses is not sufficient and lacks in quality. Bride, Bride-maid, Richmond and Kaiserin Augusta Victoria being \$5 to \$7 per 100; American Beauty sell well at \$5 to \$10 per 100. A fine grade of Killarney is shipped in at \$8 per 100. Good carnations wholesale readily at \$2 to \$3 per 100; 50c. to \$1 per dozen is the retail price for them. Sweet peas are used for many purposes at 50c. to \$1 per 100. Field-grown lily of the valley is offered by the thousands at 25c. to 50c. per 100; many are off color and short this year. Lilies are disposed of with difficulty at \$5 per 100 sprays. Daisies, heliotrope, nasturtiums, pansies and other short stock is now acceptable to the retailers, who are looking for variety. Much complaint as to the quality of Michigan fern fronds is heard; in some cases fifty per cent. are unfit for use. T. B.

ST. LOUIS.—The cut flower business the past week was anything but good, and wholesalers and retailers are complaining that there is so little doing in their lines. The weather, too, had a great deal to do with the dull business. The plant men, who should be very busy right now, had to quit work planting out, owing to the cold nights which were nearly down to freezing point. There is a vast difference in prices at retail, the downtown stores displaying signs at starvation prices, while uptown those obtained were much better where most of the better class deal. It was a pity to see so much fine grade stock sold at such cheap prices, but then all the wholesalers were in the same boat, and the stock had to be disposed of or be dumped. Today (Monday, May 4) large consignments are still coming in, and another big slump is looked for this week. We will not waste any time quoting prices, as we could not quote them correctly if we tried ever so hard.

ST. PATRICK.

PHILADELPHIA.—The market is still unsettled and stock is moving slowly and at very low prices. Carnations are still very plentiful, going at all kinds of prices and finding few buyers. Sweet peas seem to be the leaders at this time and are fetching fair values. Lily is having some call, but very little stock is available. American Beauty and Richmond roses are plentiful, but are not going very fast. Lilies are still very cheap. Conditions are very much against good business and the majority of the retail florists are complaining. It is noticeable that those getting the best trade are the ones who send out announcements to their customers and keep in touch with them. P. M. R.

ROCHESTER, N. Y. Reflections on the recent Easter trade bring us to the conclusion that in point of business done, it fell short of last year's. So many of our townspeople are out of employment that where purchases were previously made of \$2 to \$5 the prevailing price seemed to be \$1 to \$3 for the majority of sales. There were numerous exceptions of course, but writing of general facts, amounts were smaller, and quite a few large plants of azaleas, genistas, etc., also fancy baskets, that were so much in demand last year were left over. Plenty of lilies were on hand, also plants of every other description, especially spiraeas, of which there seemed to be an overabundance. Nothing particularly new was to be seen, except perhaps in fancy baskets, etc. Salter Brothers had a few plants of the rose Tausendschön; this proved to be a good shipper, and Keper, Crimson Rambler, hardy roses, and in fact every plant, excepting lilies, had no particular run; and in the commission house general assortments of reasonable price plants were disposed of. Here anything was naturally in the mad rush, and it was seemingly not how much could be secured for stock but the chance to sell at all was looked upon favorably, the main idea being to unload it if such a thing was possible.

In the cut flower business violets had preponderance, an extra demand for these being felt at the last moment. Prices held good at 50c. to 75c. per 100. Carnations, roses, etc., came in in unlimited quantity, some good, but the most poor and soft. No special price was realized

CATTLEYA TRIANAE

To hand IN PERFECT CONDITION.

Finest plants ever arrived in this country. In order to move them quickly we offer cases of about 40 fine plants with over 450 bulbs for \$55.00 per case.

CATTLEYA LABIATA, cases of about 40 plants, 400 bulbs, \$55.00.

CATTLEYA MOSSIAE, in fine condition, in cases of 40 plants, \$55.00.

ONCIDIUM VARICOSUM ROGERSII, fine stock, \$18.00 per dozen.

LAGER & HURRELL,
SUMMIT, N. J.

on this stock, values being determined by quality, and ranging from \$1.50 to \$3 per 100 for carnations; roses from \$2 to \$6 per 100; cut lilies from 10c. to 12½c. per flower and bud, but a good deal of this material was bruised in shipping.

The weather was ideal, except for a heavy downpour of rain on Sunday morning, this fact preventing the sale of a great many cut flowers, consequently those who bought heavy found themselves with a deal of left-over stock. COCKNEY.

CLEVELAND, O.—The market the past week has been rather quiet; however, the cold weather has shortened up the crop of roses and carnations, so that there is no surplus. This is the last week for double violets; those that come in show poor quality. Lily of the valley, while not plentiful, finds ready sale. Bulbous stock, such as tulips and hyacinths, is a drug; daffodils and lilies sell well.

It seems remarkable the quantity of tulips and hyacinths left on the growers' hands after Easter; everything else sold all around them. O. G.

PORTLAND, ORE. Easter trade was the best ever. Stock was in full supply and prices ranged the same as last year's. Owing to the full supply in all lines the volume of business was much greater. There was nothing special on the list of novelties, but a good, healthy demand for everything offered, which cleaned up to the satisfaction of all. MARTIN & FORBES CO.

FIRMS WHO ARE BUILDING.

Items for insertion under this heading are respectfully solicited from our subscribers. They are published free of charge.

MISHAWAKA, IND. Joseph Null is building a greenhouse on his West Third street property.

NEW ALBANY, IND. Anders Rasmussen will add nine houses to his establishment, which now covers two acres.

LA PORTE, IND. The Kaber Company contemplates building a greenhouse, 25 x 100 feet. Plans are not yet completed.

HOOSICK FALLS, N. Y.—Arthur O. Curtice has purchased land at the corner of Wilder avenue and Snow street, on which he will build a conservatory and greenhouse.

RICHMOND, VA.—Ratcliffe & Turner are adding seven new greenhouses. When these are completed the firm will have about eight acres under glass. Some of the new structures will be devoted to orchids and palms.

ATLANTA, GA.—J. P. Matterson is adding two new greenhouses to his establishment at Ponce de Leon Park; when these houses are finished, he will have a total of 8,000 square feet of glass.

EAST TOLEDO, O.—Krueger Brothers & Company are building a greenhouse, 66 x 260 feet, for carnations. The Kruegers are erecting this building one mile east and one mile north of Walbridge. They have bought 26 acres here and expect to enlarge the plant as business demands.

LANCASTER, PA.—Rudolf Nagel has purchased a lot on S. West End avenue, on which he will build three greenhouses this year—one 18 x 70 feet, and two 18 x 100 feet. The material will be furnished by the Lord & Burnham Company, and the houses will be heated by a Kroeschell boiler. Mr. Nagel plans making additions to his plant. He obtained his practical experience as a florist and gardener in several continental establishments as well as in this country.

JANESVILLE, WIS.—Foundations for the boiler room having been laid and preparations having been completed for erecting the large greenhouses on the property at the corner of Jackman and East streets, Charles Wahler, who is to have charge of Dr. C. G. Dwight's enterprise, has arrived from Chicago to superintend the balance of the construction work. The graders have nearly finished their work on the four lots and the two large boilers have arrived. Mr. Wahler has had several years of experience in growing roses in one of the largest establishments in Chicago and will undoubtedly make a success of the local project.

CALGARY, ALBERTA.—Alderman Terrill has purchased from Colonel Walker three and one-half acres immediately opposite the new Cushing factory. It will be used for a big wholesale and retail greenhouse or greenhouses. Though the price is not stated it is understood that it is in the neighborhood of \$10,000, as the property is valued at around \$3,000 an acre in the neighborhood.

Business Bits.
Cold weather mingled with snow-storms has been the prevailing conditions since Easter, so that the business in bedding plants has not yet commenced; neither has planting out carnations begun. We always like to get the latter out of the way in good season, so as to be able to devote special attention to the bedding out plant trade, which for the past few years has become quite a feature here. This year the business will be doubly welcome, as prices will be maintained at last year's level, which cannot be said of cut flowers.

The call for cut flowers since Easter has been light and prices low, and nothing much is looked forward to till Decoration Day in this line, which will no doubt be about the wind-up with the exception of funeral work. Prospects for much improvement are altogether lacking, and I look for a long period of dull business this Summer, as there is certainly not much doing in any line of trade here and very little indication of immediate revival.

Van Bochove & Brother will remove their Third street plant over to the Rose-hill plant and are now commencing work on the job. Some others will rebuild and improve, but I have not heard of any extensions being contemplated, which is as well, as the past season's price list offers no encouragement in that direction.

Quite a number of new people are starting in at truck gardening this Spring, owing to slackness of work in other lines, and this helps the seedman's business here quite a little. S. B.

CLINTON, MASS.—Patrick Burke, employed by Edward W. Reed, florist, has been reappointed by the board of selectmen as forest warden.

 News Notes.
 The present season is remaining
 very much the same as last year—cool
 and late. As a result flowering trees
 and shrubs remain in bloom much longer
 and are much more handsome. At the
 present time the many varieties of
 prunus are just in their glory and for-
 sythias never were better. Magnolias,
 too, are grand and are much covered
 with flowers this season; one of the finest
 noticeable was a plant of the variety
 stellata on the grounds of Edward B.
 Wilder and planted by his father, the
 late Marshall P. Wilder, many years
 ago. The Winter effects are now show-
 ing upon evergreens and also in the her-
 baceous border, but on the whole less
 damage has been done than was at first
 anticipated.
 At the meeting of the Gardeners and
 Florists' Club on the 19th inst. F. E.
 Palmer will read a paper on the "Art
 of Selling." This is a very pertinent
 subject at present when one takes into
 consideration the amount of material
 thrown daily on the market, and if Mr.
 Palmer can help with some new ideas he
 will not only benefit the salesmen but
 also the growers, whose returns are much
 more slim than they ought to be.
 The Waban Rose Conservatories are
 building a 400-foot addition to their Am-
 erican Beauty houses. Lord & Burn-
 ham Company are the builders and have
 the iron framework almost up. The
 house will be one of the largest in the
 country, its size being 1100x12 feet.
 Charles Robinson of H. M. Robinson
 & Company has returned from a week's
 visit to friends in New York.
 Visitors this week included E. J. Fan-
 court of the Pennock-Meehan Company
 and G. C. Watson, Philadelphia.
 George Wood of the sales department
 of the Waban Rose Conservatories has
 been on the sick list for the past week,
 his place being taken by Daniel Dwyer.
 Welch Brothers are handling quanti-
 ties of the Bon Silene rose, which, though
 old-fashioned, is still a favorite for many
 purposes.
 J. W. DUNCAN.

Cleveland.

News Notes.
 Last week Monday the father
 of Williams Brothers, Lorain, O., was
 buried. The services and interment
 were under the auspices of the local
 G. A. R.

The Berno Floral Company, Mans-
 field, O., has plans drawn for an of-
 fice salesroom and stockroom, to face
 on Hedges street, close to the green-
 houses.
 W. E. Hall, Clyde, O., has also built
 offices and warehouses on his place.
 Mr. Hall has some of the finest carnations
 seen about this part of the State;
 his seedlings in particular are splen-
 did.

At present the hanging basket is
 taking up our attention. The prob-
 lem of getting fresh sheet moss and
 getting it at a reasonable price is ab-
 sorbing a great deal of our thinking
 time. Of course it is getting scarce,
 but good moss should be obtainable to
 the user at \$2 the bag. If it keeps on
 going higher each year, it will force
 growers to use a substitute and per-
 haps that would be better, anyway.
 O. G.

PEORIA, ILL.—For the first time in
 nine years the venerable James Cole,
 aged 87, pioneer florist of the State of
 Illinois, visited the business section of
 Peoria, Friday afternoon, April 24. The
 occasion for the journey from his resi-
 dence, 1621 Perry avenue, was the
 Shriner parade, which was of absorb-
 ing interest to Mr. Cole, owing to the
 fact that James Nelson Cole, Jr., age
 22, conceded to be the youngest 32d de-
 gree Mason in the world, was in the
 parade as a member of the Mohammed
 Temple patrol. Mr. Cole viewed the
 parade from the corner of Main and
 Madison streets and exhibited the liveli-
 est interest throughout.

Chicago.
 News of the Week.
 One of the large department stores had a big advertised sale of 25,000 cut roses last Saturday. The stock ran from flowers with 8 to 15 inch stems and was speedily disposed of at 12 cents per dozen. During the sale the crowd was so great that approach to the counter was quite difficult.

At a May tea party given at the Old Ladies' Home last Saturday each of the inmates was presented with a blooming plant, and cut flowers in liberal quantities.

The Tribune prize list in the garden and window box competition has been augmented by prizes of \$150 for the best garden and \$50 for the best window box donated by the Pulverized Manure Company of Chicago. The Horticultural Society of Chicago will also award a beautifully engraved medal for the best garden by a boy or girl 12 to 18 years old.

Jegen, the florist at 27 Madison street, is moving to new quarters at 113 Dearborn street.

Miss Tonner, who has charge of the florists' supply department of the A. L. Randall Company, has returned from a well earned vacation of two weeks.

The E. F. Winterston Company received last week an importation of two carloads of bay trees in standards and pyramids which opened up in splendid shape, the quality of the stock being particularly fine.

arranging its store floor, the new plan locating the shipping department at the rear.

Vaughan & Sperry, at their quarters in the Flower Market, are receiving large shipments of peonies daily.

W. W. Seekins of Duluth, Minn., was a visitor this week. Mr. Seekins reports a very large Easter business at his new location in that city. W. Hagenann, New York, was also here.

New York.
The Week's News.
 The New York Florists' Club will meet at its rooms in the Grand Opera House Building, corner of Twenty-third street and Eighth avenue, on Monday evening next, May 11.

At the stockholders' meeting of the Cut Flower Exchange held last Saturday, John Donaldson, the well-known grower of Elmhurst, L. I., was elected president, Phil Einsman, treasurer, and Victor Dorval was re-elected secretary. The new directors elected were W. H. Siebrecht, Charles Beckman, John Donaldson and John Leach.

The bulb display in Prospect Park is well worth a visit from any one who appreciates the beauties of these Spring flowers. We do not remember seeing such a gorgeous display anywhere as is witnessed here. The blending of the different colors has been most carefully done, and the season seems to have been particularly favorable for bringing out all of the flowers simultaneously, so that the full effect of the designs is brought out to perfection. The herbaceous garden in this park is just beginning to take on a beautiful aspect. Old-fashioned flowers, such as Phlox subulata, perennial candytuft, Alyssum saxatile, Dicentra spectabilis, violets and double daisies, are showing their charming flowers just

now. Last July the park authorities installed three Goldwell motor lawn mowers (Goldwell Lawn Mower Company, Newburgh, N. Y.), and these have proved highly satisfactory, not only in keeping the lawns in better shape, but in doing away with the number of horses that had to be kept for lawn mowing purposes. These lawn mowers weigh 2,500 pounds each, and are easily operated by one person, though, of course, he has to be somewhat of a mechanic, and gasoline is used for fuel. The weight of the machine is having a splendid effect in keeping the lawns well rolled.

The many friends of Alex. McConnell, the Fifth avenue florist, will be glad to learn that he is recovering from the illness that has kept him confined to his room since Easter Sunday.

Charles Schenck, of the firm of Traendly & Schenck, is receiving the congratulations of his friends over an interesting visitor that arrived at his home Sunday morning. It is a daughter, and mother and baby are getting along very nicely.

Frank S. Hicks & Company have moved from 52 West Twenty-eighth street to their new home at 39 West Twenty-eighth street, parlor floor.

Because he is fearful that his fingers may get pricked with wire, Mr. Paderewski, the great pianist, will not receive any flowers that are offered him when on the stage during his recitals. It would seem now that a wireless bouquet is in order.

Charles Weeber, retired seedsman, formerly of the firm of Weeber & Don, will leave on July 15 for a six weeks' sojourn in Europe.

F. W. O. Schmitz has been made administrator of the estate, and guardian of the children, of the late Ferdinand Bendt, florist, Roseville, N. J., who died of typhoid fever, caused by eating infected oysters. Mr. Bendt owned in the neighborhood of \$200,000 worth of real estate, and no will could be found. Henry Dettinger, the nearest relative to the deceased, renounced his right to administer the estate; hence the appointment of Mr. Schmitz.

George Williams, a landscape gardener, formerly employed on Mr. Kernochan's estate, The Meadows, at Hempstead, L. I., committed suicide last week by hanging himself with a rope fastened to a beam at his residence, 152 Henry street, Hempstead. He leaves a widow and several grown-up children. Despondency or temporary aberration of the mind is believed to have led him to commit the rash act.

John Gompers, thirty years old, residing at 247 Deboe place, Glendale, L. I., attempted suicide by drinking carbolic acid while in Lutheran Cemetery one day last week. He was discovered by an employee of the cemetery, who hurriedly summoned an ambulance, when Gompers was removed to the German Hospital and treated. It is expected that he will recover. Gompers formerly had a florist stand on Metropolitan avenue, just outside the cemetery, and he was believed to be in comfortable circumstances.

A. T. Boddington, seedsman, reports a busy season, business being fully one-third better than last year's and far beyond expectations. Harry A. Bunyard will go South shortly for a much needed rest. Word has been received in England that Mr. Bunyard's brother, Stewart, has been killed in a railroad wreck in Australia.

The American Nursery Company reports a heavy trade this season; the orders thus far being largely in excess of the combined business of the separate concerns at this time last year. The company's large wholesale business including the F. & P. Nurseries department, although constantly growing does not show so large an increase; but the orders of all the departments for public grounds and private estates have far exceeded expectations and seem to fully justify the claims made by the company, in the public announcement soon after the organization early in the year.

Walter Mott has severed his connection with A. T. Boddington, and is now with the Vness Gardens Company, Newburgh, N. Y.

Wm. Elliott & Sons, seedsman and plant auctioneers, are very much pleased with their change of location from Fulton street to 42 Vesey street.

C. A. Mason, florist, Jacksonville, Fla., was a visitor this week.

HAIL NEWS.

DES MOINES, IA.—A hailstorm passed over this locality on April 22 last, damaging the Trillium greenhouses to the extent of \$500. The Marshall greenhouses also suffered to a considerable extent.
 A sudden, high wind saved the glass in the greenhouses of the Vaughan Seed Store at Thirty-fifth and Ingersoll. Charles McAniff, the manager, was working on a funeral design about 12 o'clock when it began hailing. He roused the other employes to help him save the flowers, for it was expected the roofs would be broken by the large stones. The wind died down so quickly that they went outside to see what was doing and witnessed one of the strangest weather phenomena ever seen in Des Moines. They saw a large greenish-black cloud approaching with the speed of a cyclone and hurried inside for shelter. The blast shook the building when it struck and then the wind ceased again. The cloud was filled with ice and had it not been for the wind the hail would have done some very destructive work.
LOCKPORT, N. Y.—Business has been very slow since Easter with nothing but funeral work and very little of that.
F. G. Lewis began planting carnations out in the field April 29.
D. T. McCarty & Sons are building one new house.
Rudolph Fritel is building two houses, both to be used for growing early vegetable plants in the Spring. L.

ANNOUNCEMENT TO LONG ISLAND FLORISTS

We can deliver your shipments on Steam and Hot Water Boilers, Pipe, Fittings, etc., as follows:

- Points within ten miles of New York, same day that we receive order.
- Extreme points of Long Island, same day by express—eighteen hours by freight.
- Within Borough of Brooklyn, same day, or can be called for from stock at our factory.

The above is of value to you. Prompt shipments for your Spring building as well as Summer but means much more in Winter when you may need repairs or a special fitting in a break down. In emergency we can have our mechanics on any special work within from one to four hours' time at almost any point in Long Island. Cut this out and hang it up as a reminder.

SAYS "IT'S A SIZZLER"

Mr. William Rhodes of Leesburg, Pa., wrote for our catalog of Hot Bed Sash and Frames. At the bottom of the letter was this P. S.

"Our No. 630 Burnham Boiler is a SIZZLER. Talk about heating—why we had to keep the fire door open most of the time last winter, to keep steam from getting too high."

Now why is it a "sizzler"?—why a boiler of record breaking economy? The new boiler catalog tells. Not in the usual dry way of catalog, but in regular showing up of point after point, exactly as we would do in a talk, if you had dropped in at the office. It's a mighty valuable catalog to have. Send for it.

Talks on Greenhouse Material

No. 1
PROBABLY there is no one thing so important, outside of having a first class grower, than the construction of your greenhouse. It is a fact that the greenhouse and its construction have a great deal to do with the class of stock you turn out, and yet there are a lot of you fellows who go on building without any regard to what the house is to be used for. It is essential that you have your houses built along up-to-date lines if you expect to grow the best class of stock. If you want to grow roses don't build a house for lettuce. The rose house and the lettuce house are not built the same and if you want the best results you want to build your houses suited to your purpose. Don't go on building 10 ft. houses because you started that way twenty years ago, unless you don't care about making money. We'll be glad to have you write us whenever you want to build and will talk the matter over with you.

Send for our catalog now and look it over first.

Patent Applied For

Why My New Curved Iceless Eave is Far Superior to Anything on the Market Today

- 1st. No sash bars encased in iron, thereby eliminating all danger of bars decaying.
- 2nd. Can be used in conjunction with iron frame construction, thereby doing away with that very objectionable feature, "columns."
- 3rd. Roof bars with drip grooves, which act as conductors to carry away the condensation: **Result**, the driest roof ever used for greenhouse purposes.
- 4th. **THE MOST IMPORTANT OF THEM ALL.**
The very small increase in cost over the ordinary style of construction which makes it possible to be used for commercial as well as private purposes.

TAKEN FROM OUR 1908 CALENDAR

OH, YES, this is Memorial Day Month, the month a lot of you florists will be cleaned completely out, your spring worries will be over, and the question of painting the houses comes up. Whatever you do, get the right kind of white lead, the kind that's made by a greenhouse firm for greenhouse painting. Put on a paint that "stays put"! Then there's putty, but our paint booklet tells about both—we want you to have that booklet—use a postal.

By the way, did our calendar reach you O. K.? Some have told us they never received it. We want you to have it, not only so you will be up-to-date, but because it has something to say every month about up-to-date materials.

Seed Trade Notes.

During the past week the seed business in all its branches has shown a most radical slackening in the demand, much more so than could be reasonably expected so early in May; but when we take into consideration the very unfavorable weather conditions, for a large store trade, that have prevailed continuously since the closing days of April, it is really a good showing. The great totals of May cash-counter-trade sales, have been made in seasons when warm and pleasant weather continually marked the month; nevertheless, we shall no doubt this season in the end realize all our profits from the small garden trade, but this branch of the business will be very much longer continued than is usual, and it will be well into June before these seed sales are finally over this year.

Since the middle of April the many seed stock shortages that were sure to develop, as the end of the season approached, have, to a far greater extent than many of us have paused to realize, curtailed our sales. Early in the year our customers were fully informed regarding the expected insufficiency of such seeds as sweet corn, Lima beans, onion, onion sets, and many others, to meet the expected demands, but as always has been, and probably always will be the case, planters as a rule neglected supplying themselves with the needed seeds, until the ground was ready to receive them, and then at the eleventh hour found that there was practically nothing that they wanted and needed left in the seed line.

One of the best patronized departments of the business this season has been that devoted to farm seeds. Everything in this line has practically been sold out completely. Seed potatoes have not in years had better sales, or at such consistently steady and lucrative prices. The same sold-out condition applies to all varieties of field corn, but the demand for field corn has been very much more urgent and insistent, as, in the case of seed potatoes, whenever the would-be purchaser finds the needed stocks unobtainable from his seedman, he simply falls back upon his own bins or his grocer for the planting tubers required. Not so with field corn: for it is a very curious fact that a planter seldom plants the corn he is feeding, unless he has the season before saved some especially for seed purposes from his own raising. All seed grains have also been far short of the demand, especially Spring wheat, and Spring rye. Owing to the almost prohibitive prices of clover seeds and timothy grass, seeding wherever possible has been postponed; but even then the demand has been very large. At this writing red clover seed has softened a little in price, and can now be purchased in round lots for about 25c. per pound. The top retail prices for the season of 1908 so far reported to me have been: \$4 per bushel (45 pounds) for timothy grass seed, and 32c. per pound for red clover seed.

Onion sets also ended the season very strong in price; in fact, at the very top rates of \$4 per bushel for yellow and red sets, and \$4.50 to even \$5 for the white ones. We have all most certainly had a very large demand this season for onion sets; but such a condition always materializes in a year of excessively high rates for the onion seed.

Another few days will find the seedsmen beginning to reduce their forces to the normal number, as what business still remains to be finished can be comfortably taken care of by the regular forces. The past week saw the end of the night work for the Spring of 1908.

GROWERS OF CHRYSANTHEMUMS WHO HAVE MORE YOUNG PLANTS THAN THEY NEED, WILL FIND A READY SALE FOR THEM BY PLACING AN ADVERTISEMENT IN THE FLORISTS' EXCHANGE.

Prices Advertised in these Columns are for

European Notes.

The heavy falls of snow reported last week, which appear to have stretched from the middle of France to the North Pole, were succeeded by rains so persistently heavy that floods are the order of the day in all directions and all outdoor work is quite at a standstill. The trade in clovers, grasses, and mangels, is bound to suffer, while the demand for seeds of catch crops such as mustard, rape, kale and Trifolium incarnatum is bound to be very brisk a little later on.

As regards prices, rye grass, both Italian and perennial, is being quoted at cheaper rates and as no one cares to hold over a further drop may be expected in the near future. Clovers must be sold for the reason that there is no new seed that could be held over and buyers naturally fight shy of two-year-old stock.

Peas that have in some cases been in the ground since February cannot have escaped serious injury and many failures are sure to be reported ere long.

As regards biennials now growing for 1908 crops, rutabagas and yellow-fleshed turnips will be found to have suffered severely when an inspection of them is possible. The acreage of both is much below the average.

Annual flower seeds are not yet sown, but if the genial change inaugurated by May continues the crops of these need not be unduly late.

Mr. and Mrs. W. Allee Burnee arrived at Southampton per S. S. Adriatic, and are enjoying a most delightful time in the Isle of Wight. They were accompanied as far as Cherbourg by D. I. Bushnell of St. Louis, and a brief account of the latter's birthday party at sea on April 26 has been prepared for publication.

The American invasion starts most auspiciously. "Let 'em all come."

On every hand one hears gloomy anticipations respecting business conditions in the near future. The following is a case in point: One dealer who has for several years placed an order for 3,000,000 crowns lily of the valley has this year cut it down to 300,000, and this he affirms is twice as many as he is likely to sell. The development of the cold storage is in some degree responsible, but beyond this shrewd business men see storms ahead and are prudently gathering in the sails.

EUROPEAN SEEDS.

P. S.—A most remarkable change has taken place since yesterday: a warm, misty wave has settled on us and the shade temperature is as high as 73 degrees Fahr. Strangely enough the wind is from the north and London is 9 degrees hotter than Nice. The change in the appearance of the trees is simply marvelous.

E. S.

French Field Seed Conditions.

March and April were cold and disagreeable; a heavy fall of snow occurred on April 25 last. Old people say they do not remember such a late fall of snow. The thermometer went down as low as 3 to 4 degrees below zero (centigrade) during a few nights, and we felt very anxious about the young plants and cabbages, swedes, turnips, etc., just shooting to seeds. Happily the frosts did not last long enough to do much harm and we are now enjoying splendid weather. Within a week or so we shall be able to set out our lettuces for seeds; the plants generally are looking well. Radishes also will soon be transplanted. A short time ago we planted our beets, mangolds and carrots under pretty good conditions; the worst is that the plants were generally very scarce and tiny, therefore the acreages planted are much smaller than usual. Of beets especially there is a very big shortage; and even if the crop turns out a splendid one, we should still be far from having the quantities we need here every year; and as nearly all stocks were cleared out last season, no doubt high prices must prevail.

Mangels yellow and white varieties, have been largely planted again this year, but one noticeable fact is the scarcity of the long red Mammoth mangel. Owing to its selling very slowly these past few years, most growers left off growing this variety; but last Autumn the demand for it was so large that all stocks were soon cleared out at a good buying price. As there were but very few plants indeed to set out for 1908 crop, no doubt this good old variety will fetch a good price again

next season. Yellow varieties do not seem to have advanced much in price; white varieties were a big crop last season and prices dropped very considerably. However, some large houses bought heavily at the end of the season and there is not a large quantity left over now. But plantations are very large again, and therefore there is not much chance for an advance in price, unless the crop turns out bad.

Of carrots the plantations are not very large, a good many plants having been destroyed by bad weather, worms, etc., through last Winter. Most of the plants were very tiny and delicate, owing to their having been sown very late last Autumn. A small crop is expected.

Cabbages, swedes, turnips, etc., as stated in my last report, will be a very poor crop; plantations were very much reduced and the late frosts no doubt badly affected the plants, which were just shooting.

Onions have been again largely planted this Spring for 1908 crop, and should everything turn out well, a big crop may be expected.

Leeks are doing pretty well for the present, although the plants we set out for seeds were very small.

Parsnip is not much planted; a short crop is expected. Parsley is doing well, also Winter radishes.

The season is now over for clover; the price which this article reached last season is most surprising. For our part here, we do not remember having ever seen such big quotations for clover, nor such a small quantity on the market; those who had the good luck to buy at once when the season started no doubt have made a good deal of money.

FRENCH SEEDS.

Cyclamen Persicum Grandiflorum Odorum.

Editor Florists' Exchange:

The preconceived opinion expressed by "European Seeds" in The Florists' Exchange of the 4th, April last, regarding the new Cyclamen persicum grandiflorum odorum, which we sent out in January, 1907, was read with some surprise by us. We are as well aware as the writer of the notes referred to, that cyclamens with scented flowers have been known for many years past and the fact has been published in some of our works on flowers; but the fragrant plants in existence before our introduction had always been either small flowered, not very well fixed, or lacking in some other respect.

We can claim for our last year's novelty that it has originated spontaneously with a Parisian grower; that in regard to habit of plant, size of flower, it is equal to the large-flowering Persian cyclamen, and that for intensity and delicacy of fragrance it stands alone in the trade up to the present date. It is consequently a real novelty, and not as the views expressed by your correspondent seem to imply—an old sort re-introduced.

THE FLORISTS' EXCHANGE. When Writing Please Mention

Dreer's Hardy Perennials

Largest assortment of desirable varieties. Plants of proper size to give best immediate results. For complete list of varieties see our current wholesale list.

Many planters not thoroughly familiar with this class of plants have an idea that nothing but a large, field grown clump will give satisfactory returns for the season. This is an experience has taught us, is in most instances a mistake. A vigorous plant of proper size will, in nearly every case, give quicker and better returns than the best so called "field clumps" that can be procured. It will be noticed that the majority of the stock offered in this list is described as being 3, 4 or 5 inch pots. This does not necessarily mean that the plants have been altogether not grown, but that they have been field grown and dug and potted up during the Fall and early Winter months, and such stock can be planted, even late in the Spring, with practically no loss, which in the case of clumps, is often quite serious.

(89) Canvas as a Substitute for Glass. Would it do to stretch canvas over a greenhouse framework as a substitute for glass for forcing vegetables in the early Spring, if the canvas was arranged to roll up and let the sunshine in when the outdoor temperature is above freezing? If so, would you use a thin or heavy ducking? Iowa. J. A. M.

—We would not advise the use of canvas as a substitute for glass, either for forcing vegetables or any other crop. As a means of shade from the hot sun canvas is all right, but as a protection from cold nights, its benefits would be very slight.

(90) A Destructive Moth.—A small moth is active in my houses; it lays its eggs on the bottom of the leaves of plants, and they hatch into small green worms. These worms eat the leaves on the bottom side and do great damage to the plants. What can I do to get rid of them? Penn. F.

—This is undoubtedly the same moth and caterpillar that cause so much trouble to those who grow mignonette under glass. Cover the ventilator openings with thin muslin to prevent the entrance of the moth. Dust the foliage of the plants with some one of the insect powders to kill the caterpillars.
